# Getting Started

## Introduction to EBS-N200

---

The EBS-N200 Network Display Adapter lets you control the delivery of audio and video content over IP based networks to displays, such as plasmas or projectors.

## Package Contents

---

The packing box contains the following items:

- EBS-N200
- CD containing User Guide (this document)
- Power Adapter
- Power Cord
- Warranty Card
- Quick Start Guide

## Hardware and Software

---

To begin using the EBS-N200, you must first install the hardware then configure the software to the display model.

## Browser Requirements

---

To use the EBS-N200, you must have Internet Explorer 6.0 or newer installed.

# Installing the EBS-N200

## Overview

---

The EBS-N200 comes ready to install. To install it, you simply connect the unit to a display and detect or setup the initial IP address. After that, you are ready to configure the software to meet your individual specifications.

## Connecting the Hardware

---

You can connect the EBS-N200 to various types of displays. This section provides images on connecting the unit to a plasma, a plasma with surround sound, and a TV.

### Plasma Hookup

The following image displays how to connect the EBS-N200 to a plasma:

## Installing the EBS-N200, continued

### Plasma Hookup with Surround Sound

The following image displays how to connect the EBS-N200 to a plasma with surround sound:

## Installing the EBS-N200, continued

### TV Hookup

The following image displays how to connect the EBS-N200 to a TV:

## Detecting and Setting Up the Initial IP Address

---

Once power has been applied to the unit, an IP address must be assigned either automatically thru DHCP or manually thru the EBS-N200's web interface. Diskless and hard drive equipped EBS-N200s are pre-configured differently as follows:

### Diskless EBS-N200 IP Address Configuration:

All diskless EBS-N200's are shipped with the DHCP enabled and rely on the boot server to supply an IP address. Diskless systems are also set up to work with a Domain Name Server (DNS) allowing an actual text string to be used as opposed to the units IP address when accessing the unit thru a browser. The default name of "EBS-N200" can be used for initial access to the unit thru a browser and should be changed during configuration since additional un-configured EBS-N200s on the network will have the same name. Because of this only one EBS-N200 should be powered up and configured at a time to prevent network conflicts. Refer to the EBS-N200 Sever Software Users Guide for Server, DHCP, and DNS set up.

### Hard Drive Equipped EBS-N200 IP Address Configuration:

All EBS-N200's equipped with a hard drive are shipped with a Static IP Address of 192.168.0.10. This IP address can be changed as follow:

- Connect the EBS-N200 to a computer with the same subnet (192.168.0.XXX)
- Start the computers browser and enter 192.168.0.10
- The EBS-N200's main web page will appear; select the **Configure** tab and the following page will appear
- Set the desired IP address, Subnet Mask, and Default Gateway and document
- Select **Submit** and **Restart** to reboot the unit for the new IP Address to take effect

## Installing the EBS-N200, continued

### Configuring the EBS-N200

Before you begin using the EBS-N200, you must enter the display type and model to which it is connected. The controls available in the user interface (EBS-N200 software) directly correspond to the display type and model that you select. The first time you power on the unit, the initial **Configuration** control page displays. This is the page where you enter the display type and model. Once you enter that information, the **Main** control page will be the default page that displays each time you power on the unit.

The following image displays an example of the **Configuration** control page:

The screenshot shows the EBS-N200 Configuration - Basic Settings page. At the top left is the EBS-N200 logo and 'NETWORK DISPLAY ADAPTOR'. The top right shows status information: Device: Select Type, Model: Select Model, Location: (empty), IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Communication Error. On the left is a 'Control Pages' sidebar with buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. The main area is titled 'EBS-N200 Configuration - Basic Settings' and contains fields for Device (Select Type), Model (Select Model), Default Resolution (Default), and Location. Below this is the 'Network Settings' section with radio buttons for 'Obtain IP address automatically (DHCP)' and 'Use the following settings'. The latter is selected, showing fields for IP Address, Subnet Mask, Default Gateway, Primary DNS Server, and Secondary DNS Server. A 'Restart' button is present next to a note: 'Note: The unit must be restarted for the network configuration changes to take effect.' A 'Submit' button is at the bottom center. On the right, 'Setup Pages' includes links for Basic Settings, Advanced Settings, Date/Time Settings, and Input Mapping.

To enter the display type and model, perform the following steps:

1. In the **Device** field, select the type of display to which the EBS-N200 is connected.
2. In the **Model** field, select the model of the device.
3. In the **Location** field, enter the location of the EBS-N200, such as a room number or a conference room. This information is helpful to identify the EBS-N200 unit.
4. Click the **Submit** button. The controls available on the user interface will directly correspond to the selected display and model.

# Using the Software

## Overview

---

The EBS-N200 software is a user interface that allows you to control the audio and video inputs. This section describes how to launch the software and the screen layout.

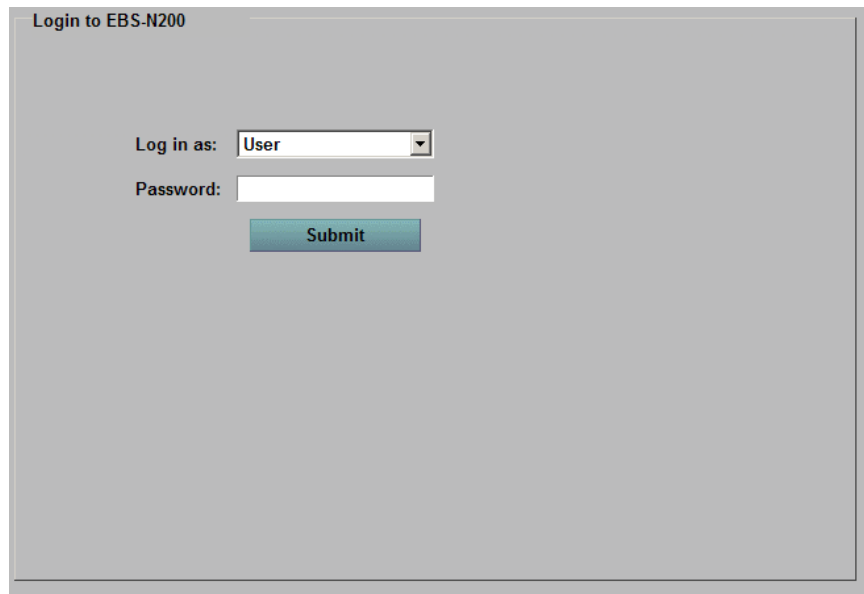

## Launching the Software

---

To launch the EBS-N200 software, perform the following steps:

1. In the **Address Bar** of your Internet browser, enter the IP address to which you want to connect and press **Enter**. If a password is required to access the software, the **Login to EBS-N200** screen displays. If no password is required, the **Main** control page displays and you do not have to complete steps 2 through 4.

The following image displays an example of the **EBS-N200** screen:

2. In the **Log in as** field, select **User**, **Remote View Host**, or **Administrator** from the drop-down list.
3. In the **Password** field, enter the EBS-N200 password.
4. Click the **Submit** button.

## Using the Software, continued

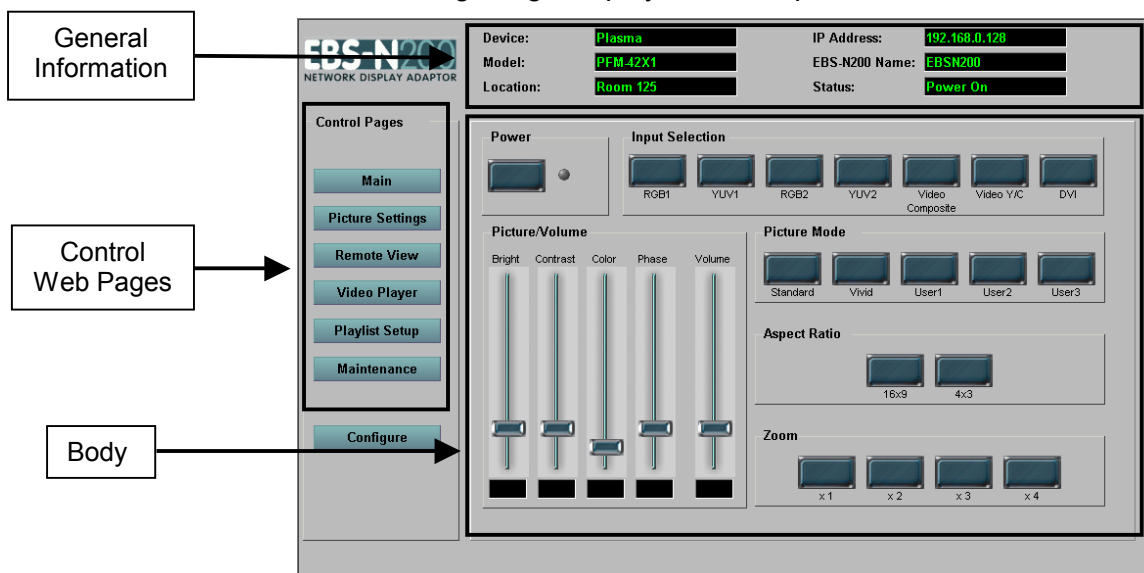

### Screen Layout

The user interface screen contains three major sections:

- General Information
- Control Web Pages
- Body

The **Main** control page is the default screen. To navigate to and display any other control page, click the button for that page. Use these screens to enter initial information and then edit and maintain information, as necessary. The interface refreshes automatically every few seconds and updates the screen with the changes.

The following image displays an example of the user interface:

## Using the Software, continued

### General Information

The **General Information** section is located at the top of the screen. It contains information that is either automatically populated or completed by a network administrator. You can change the information displayed in this section by clicking the **Configure** button in the **Control Web Pages** section.

Refer to the following table for a description of the fields in the **General Information** section:

Field	Description
Device	The <b>Device</b> field displays the type of device to which the EBS-N200 is connected.
Model	The <b>Model</b> field displays the model of the device.
Location	The <b>Location</b> field displays the location of the EBS-N200, for example, a room number or a conference room. This information is helpful to identify the EBS-N200 unit.
IP Address	The <b>IP Address</b> field displays the IP address of the EBS-N200.
EBS-N200 Name	The <b>EBS-N200 Name</b> field displays the name of the EBS-N200 unit.
Status	The Status field displays current status of the <b>EBS-N200</b> unit, such as <b>Power On</b> or <b>Standby</b> .

## Using the Software, continued

### Control Web Pages

The **Control Web Pages** section is located at the left side of the screen. It contains various pages on which you can setup and maintain information. This section includes the following options:

- Main
- Picture Settings
- Remote View
- Video Player
- Playlist Setup
- Maintenance
- Configure

### Body

The **Body** section is located in the middle of the screen. The **Control Web Page** that you select determines the information displayed in the body. Additionally, the information in this section varies by the display type and model.

# Control Web Pages

## Configuration

The **Configure** control page allows you to configure the EBS-N200. If passwords are required to access the software, you must be logged in to EBS-N200 as **Administrator**; you cannot access the **Configure** control page logged in as **User** or **Remote View Host**.

**Note:** You cannot make changes to the display using the **Configure** control page. To make those changes, use the **Main** control page.

The **Configure** control page is comprised of four screens:

- Basic Settings
- Advanced Settings
- Date/Time Settings
- Input Mapping

### Basic Settings

Use this screen to select the display type and model to which the EBS-N200 is connected and make changes to the IP address.

The following image displays an example of the **Basic Settings** screen:

The screenshot shows the EBS-N200 configuration interface. At the top left is the logo 'EBS-N200 NETWORK DISPLAY ADAPTOR'. On the right, a status bar shows: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Power On. A 'Control Pages' sidebar on the left contains buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. The main area is titled 'EBS-N200 Configuration - Basic Settings'. It features dropdown menus for Device (Plasma), Model (PFM-42X1), and Default Resolution (1024x768), and a text field for Location (Room 125). Below this is the 'Network Settings' section with radio buttons for 'Obtain IP address automatically (DHCP)' and 'Use the following settings'. The latter is selected, showing input fields for IP Address (192.168.0.22), Subnet Mask (255.255.255.0), Default Gateway (192.168.0.1), Primary DNS Server, and Secondary DNS Server. A 'Restart' button is present next to a note: 'Note: The unit must be restarted for the network configuration changes to take effect.' A 'Submit' button is at the bottom center. A 'Setup Pages' sidebar on the right lists links for Basic Settings, Advanced Settings, Date/Time Settings, and Input Mapping.

## Control Web Pages, continued

### *EBS-N200 Configuration*

The **EBS-N200 Configuration** section allows you to select the display type and model to which the EBS-N200 is connected. Additionally, you can enter a location of the EBS-N200, which can be used to identify the unit.

Refer to the following table for a description of the fields in the **EBS-N200 Configuration** section:

Field	Description
Device	Select the device to which the EBS-N200 is connected.
Model	Select the model of the device. The models displayed in the drop-down list correspond to the device that you select.
Default Resolution	Select the default resolution for the display.
Location	Enter the location of the EBS-N200, for example a room number or a conference room. This information is helpful to identify the EBS-N200 unit.

### *Network Settings*

The **Network Settings** section displays the IP address used for network connectivity. DHCP or Static IP addressing is available.

After you make changes to the network settings, you must restart the EBS-N200 for the changes to take effect.

## Control Web Pages, continued

### *Network Settings, continued*

Refer to the following table for a description of the fields in the **Network Settings** section:

Field	Description
Obtain IP Address Automatically (DHCP)	Select this radio button to have the software automatically detect the IP address.
Use the following settings:	Select this radio button to enter specific network settings and then enter the information, as necessary, in the following fields: <ul style="list-style-type: none"><li>- IP Address</li><li>- Subnet Mask</li><li>- Default Gateway</li><li>- Primary DNS Server</li><li>- Secondary DNS Server</li></ul>

## Control Web Pages, continued

### Advanced Settings

Use this screen to enter a name for the EBS-N200, enter passwords for access to the unit, and change serial port settings.

The following image displays an example of the **Advanced Settings** screen:

### *EBS-N200 Configuration – Advanced Settings*

The **EBS-N200 Configuration – Advanced Settings** section allows you to specify a name for the EBS-N200 unit and restrict access to the EBS-N200. If the password fields are blank, there is unrestricted access to the EBS-N200. If the password fields are populated, a user must login to the EBS-N200 to gain access.

Refer to the following table for a description of the fields in the **EBS-N200 Configuration – Advanced Settings** section:

Field	Description
EBS-N200 Name	Enter a name for the EBS-N200 unit. This name directly corresponds to the IP address of the unit. The IP address and the EBS-N200 name can both be used to identify the unit.

## Control Web Pages, continued

### *EBS-N200 Configuration – Advanced Settings, continued*

Field	Description
EBS-N200 Password	The EBS-N200 Password is used to access non-accelerated media files on remote servers
Administrator Password	Enter a password for users to gain access to all EBS-N200 functionality. If you enter this password when you initially log in to the software, you can access any control page without entering any additional passwords. If you initially log in as <b>User</b> or <b>Remote View Host</b> , you must enter this password to access the <b>Configure</b> control page.
Remote View Host Password	Enter a password for users to log in as a host for remote view sessions. If you initially log in to the software as <b>User</b> , you must enter this password to host a remote view session.  <b>Note:</b> If a user logs in as an administrator, this password is not required.

## Control Web Pages, continued

### *EBS-N200 Configuration – Advanced Settings, continued*

Field	Description
User Password	Enter a password for users to access the software. This password will not allow users to host remote view sessions or access the <b>Configure</b> control page.
Conference Mode	This determines access to the <b>Remote View</b> control page functionality. Select <b>Open Access</b> to allow anyone the ability to project their screen on a display. Select <b>Hosted</b> to require a host for remote view sessions.

## Control Web Pages, continued

### Serial Port Settings

The **Serial Port Settings** section displays information based on the device and model selected. This information automatically populates, however, you can change it as necessary.

Refer to the following table for a description of the fields in the **Serial Port Settings** section:

Field	Description
Baud Rate	The <b>Baud Rate</b> field automatically populates based on the device and model selected. If necessary, select another setting from the drop-down list.
Parity	The <b>Parity</b> field automatically populates based on the device and model selected. If necessary, select another setting from the drop-down list.
Data Bits	The <b>Data Bits</b> field automatically populates based on the device and model selected. If necessary, select another setting from the drop-down list.
Stop Bits	The <b>Stop Bits</b> field automatically populates based on the device and model selected. If necessary, select another setting from the drop-down list.
Flow Control	The <b>Flow Control</b> field automatically populates based on the device and model selected. If necessary, select another setting from the drop-down list.

## Control Web Pages, continued

### Date/Time Settings

Use this screen to enter and maintain the current date and time. This is especially important if you want to synchronize several EBS-N200 units.

The following image displays an example of the **Date/Time Settings** screen:

The screenshot shows the EBS-N200 Configuration - Date/Time Settings web page. At the top, there is a header with the EBS-N200 logo and the text 'NETWORK DISPLAY ADAPTOR'. Below the logo, there are several fields for device information: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Power On. On the left side, there is a 'Control Pages' menu with buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. The main content area is titled 'EBS-N200 Configuration - Date/Time Settings' and contains two sections: 'New Date' and 'New Time'. The 'New Date' section has three drop-down menus for Year (2004), Month (7), and Day (30). The 'New Time' section has three drop-down menus for Hour (14), Min (43), and Secs (10). Below these fields is a 'Submit' button. On the right side, there is a 'Setup Pages' section with links for Basic Settings, Advanced Settings, Date/Time Settings, and Input Mapping.

To make enter or change the current date and time, perform the following steps:

1. In the **New Date** field, select the current year, month, and day from the drop-down lists.
2. In the **New Time** field, select the current hour, minute, and second from the drop down list.

**Note:** The time in the **New Time** field is displayed in the 24-hour clock format.

3. Click the **Submit** button.

## Control Web Pages, continued

### Input Mapping

Use this screen to assign input numbers to corresponding actual inputs for a specific display type and model. The inputs initially default in the same order they are displayed on the **Main** control page in the **Input Selection** section.

The following image displays an example of the **Input Mapping** screen:

The screenshot shows the EBS-N200 Configuration - Input Mapping web page. At the top, there is a header with the EBS-N200 logo and the text 'NETWORK DISPLAY ADAPTOR'. Below the header, there are several fields for device information: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Power On. The main content area is titled 'EBS-N200 Configuration - Input Mapping' and contains a list of seven inputs, each with a drop-down menu and a corresponding video standard: Input 1 = RGB1, Input 2 = YUV1, Input 3 = RGB2, Input 4 = YUV2, Input 5 = Video Composite, Input 6 = Video Y/C, and Input 7 = DVI. Below the list are 'Submit' and 'Reset' buttons. On the left side, there is a 'Control Pages' sidebar with buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. On the right side, there is a 'Setup Pages' sidebar with links for Basic Settings, Advanced Settings, Date/Time Settings, and Input Mapping.

To change the input number of an actual input, perform the following steps:

1. In the drop-down list corresponding to the actual input you want to change, select the new input number.
2. Click the **Submit** button. The changes will be saved.

**Note:** If you make input mapping changes and then want to revert back to the default mapping, click the **Reset** button.

## Control Web Pages, continued

### Main

---

The **Main** control page changes the way video looks and audio sounds on the display. The features available on this control page change according to the selected device and model. Occasionally the control page displays features that are not applicable for a specific device and model. If this occurs, the functionality of that feature does not work.

Some features work only in combination with other features. For example, **Bright** in the **Picture/Volume** section only works if the **User** button is depressed in the **Picture Mode** section and a video signal is provided to the display. Additionally, some of the inputs are only available if the display has an expansion card installed.

**Note:** The validity of certain functions depends on the particular device and model, selection of inputs, and whether input connection is provided. If you press a button and attempt to change a setting that is not valid in the current context, the button will automatically return to its original position.

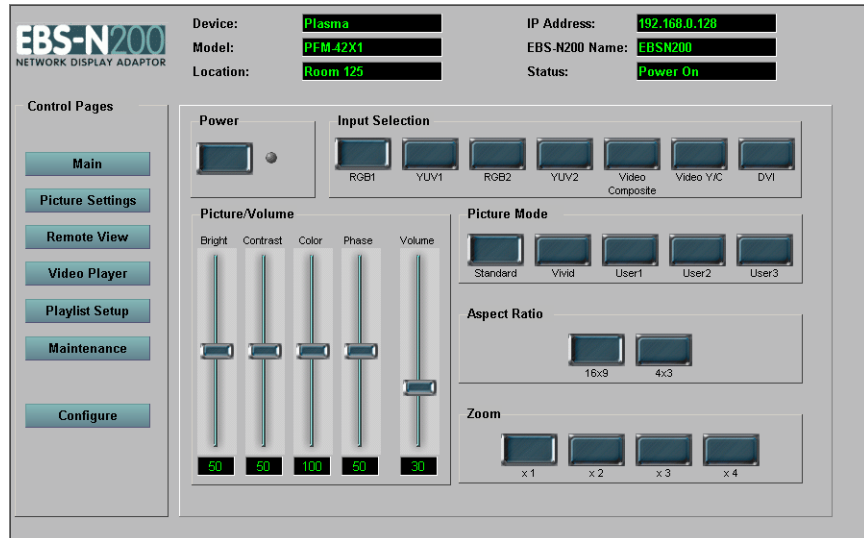

The **Main** control page contains the following sections:

- Power
- Input Selection
- Picture/Volume
- Picture Mode
- Aspect Ratio
- Zoom

## Control Web Pages, continued

### Main, continued

The following image displays an example of the **Main** control page:

## Control Web Pages, continued

### Power

The **Power** button turns the display on and off.

Refer to the following table to determine the status of the display:

If the <b>Power</b> button is...	Then, the display is...
Depressed and the indicator light is green	Turned on
Not depressed and the indicator light is red	In standby mode
Not depressed and the indicator light is gray	Undefined or error condition

To turn a display on, perform the following steps:

1. Press the **Power** button. The button remains depressed and the indicator light turns green.

To change a display to standby mode, perform the following steps:

1. With the **Power** button depressed, press the button again. The button returns to the original position and the indicator light turns red.

### Input Selection

The **Input Selection** section allows you to select the source of the input signal to the EBS-N200.

The device and model displayed in the **General Information** section determine the buttons available in this section.

To change the input selection, perform the following steps:

1. Press the button corresponding to the input selection you want to activate. If the command is successful, the display displays video from that input. If the command is not successful, the button returns to its original position.

## Control Web Pages, continued

### Picture/Volume

The **Picture/Volume** section has controls to adjust settings, such as bright, contrast, color, phase, and volume of the display. The numbers displayed at the bottom of the controls indicate the current setting.

To change a setting, perform the following steps:

1. Place your cursor over the slider of the setting that you want to change.
2. Click and hold down your left mouse button and drag the slider to the new setting.
3. Release your left mouse button.

## Control Web Pages, continued

### Picture Mode

The **Picture Mode** section allows you to control the color scheme displayed on the display by using preset values. There are two types of preset values: values that are preset by the factory and values that are preset by a user. For example, press the **Standard** button to use the factory default settings for bright, contrast, color, phase and volume corresponding to the device and model specified, or press the **User1** button to use user defined default settings.

**Note:** The buttons displayed in the **Picture Mode** section exactly correspond to the controls available in the on-screen setup menu for the display. These are the controls that are accessible using the display's remote control. For more information, refer to the user guide for the display.

To change a setting, perform the following steps:

1. Press a button, for example **Standard**, to use the default color scheme associated with that button. You cannot manually change the settings associated with that button by using the picture/volume sliders.

To define user default settings, perform the following steps:

1. Press the button for which you want to define default settings, for example **User1**, **User2**, or **User3**.
2. In the **Picture/Volume** section, place your cursor over the slider of the setting that you want to change.
3. Click and hold down your left mouse button and drag the slider to the new setting.
4. Release your left mouse button.
5. Repeat steps 2 through 4 for each setting that you want to change. These settings are automatically saved and each time you press the associated button, the default color scheme is applied.

## Control Web Pages, continued

### Aspect Ratio

The **Aspect Ratio** section allows you to specify the layout proportion of width to height on the display screen.

The device and model displayed in the **General Information** section determine the buttons available in this section.

To change the aspect ratio, perform the following steps:

1. Press the button corresponding to the width to height proportion you want to display on the display.

### Zoom

The **Zoom** section has controls to cause the picture to appear larger on the display.

To zoom the picture, perform the following steps:

1. Press the **x 2**, **x 3**, or **x 4** button to incrementally increase the size of the picture on the display.
2. Press the **x 1** button to return the picture to the original size (default, unmagnified state).

### Picture Settings

---

The **Picture Settings** control page provides additional settings not included on the **Main** control page.

### Resets

The **Resets** section allows you to quickly reset the picture, audio, and size settings to the display default settings.

To reset a setting, perform the following steps:

1. Press the **Reset Picture** button, the **Reset Audio** button, or the **Reset Size** button.

## Control Web Pages, continued

### More Settings

The **More Settings** section allows you to change the color temperature, aperture, and color system settings. The available options display in the drop-down list for each field. These options change according to the display attached to the EBS-N200.

To change the color temperature, aperture, or color system settings, perform the following steps:

1. In the **Color Temperature**, **Aperture**, or **Color System** field, select the new setting from the drop-down list.

### Remote View

---

The **Remote View** control page provides a tool for remote conferencing and presentations. To use remote view, you must have VNC installed and running. VNC is a software application, launched independently from the EBS-N200 software application, which allows you to view and interact with one computer using a simple program on another computer anywhere on the network. This means that you can display your desktop on a display connected to an EBS-N200 unit and share it with an audience.

Remote view sessions can either be open access or hosted. Open access allows anyone the ability to begin and control a remote view session. Hosted limits the control of a remote view session to one person, the host. If a remote view session is hosted, you must log in as either a participant or the host.

**Note:** The network administrator configures the **Remote View** control page to open access or hosted. This is done using the **Configure** control page.

## Control Web Pages, continued

### First Time Setup

The first time you use remote view, you must download and install the VNC software and change the password. You can download this software directly from the **Remote View** control page. This page allows you to select the appropriate VNC version for your operating system. The procedure to download and install VNC is the same for both remote view open access sessions and remote view hosted sessions.

The following image displays an example of the **Remote View** control page (open access):

**EBS-N200**  
NETWORK DISPLAY ADAPTOR

Device: Plasma IP Address: 192.168.0.128  
Model: PFM-42X1 EBS-N200 Name: EBSN200

- Configure

Remote View Commands

IP Address: 192.168.0.11  
Change Resolution: Default  
Lock Session:

Connect  
Disconnect All

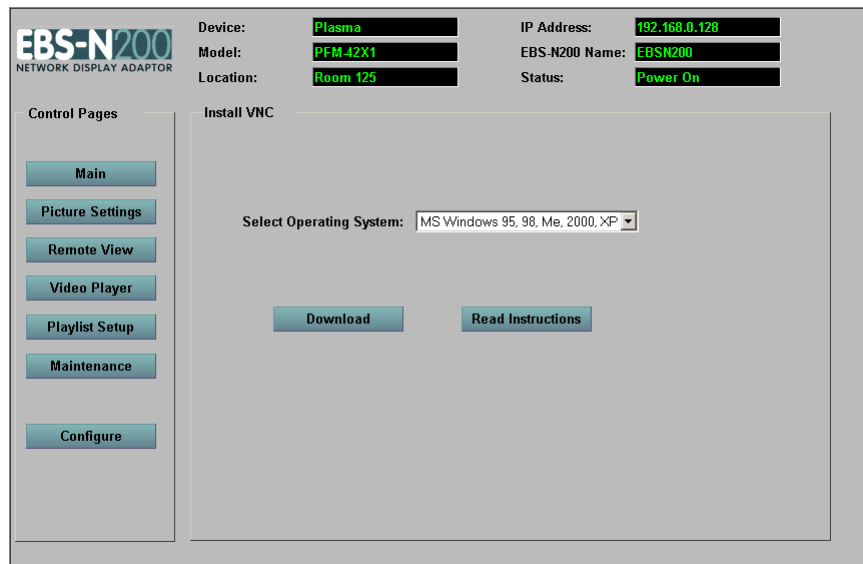

Before connecting:  
1. If you don't have VNC software installed, [click here](#)  
2. Make sure VNC server is running on your computer  
3. Change your VNC server password to "password"

## Control Web Pages, continued

### Downloading VNC

To download VNC, perform the following steps:

1. For Open Access sessions, under **Before connecting**, the first step indicates, **If you don't have VNC software installed, click here**. For Hosted sessions, the note indicates, **To install VNC software, click here**. On either screen, click the **click here** hyperlink. The following screen displays:

2. In the **Select Operating System** field, select the appropriate platform.
3. Click the **Download** button to download the VNC software.
4. At the prompt, save the download file to a directory of your choice or immediately open the file to install the software.

## Control Web Pages, continued

### *Installing VNC for Windows 9x/2000/NT/XP*

To install VNC for Windows, perform the following steps:

**Note:** When you install VNC, you must select all of the default settings. For more detailed information regarding VNC, refer to the VNC Web site at [www.realvnc.com](http://www.realvnc.com).

1. Run the self-extracting executable file and follow the instructions to install the VNC server and viewer. You do not need to install it as a service.
2. Start the VNC Server (**Start > Programs > RealVNC > Run VNC Server**). If you installed VNC as a service, VNC will already be running.
3. In the system tray (bottom right corner of the screen where the clock is located), right-click on the **VNC icon** and click on **Properties**.
4. In the **Password** field, enter **password** (all lower case).
5. Click **OK**.

VNC server is now ready to accept incoming connections from the EBS-N200.

### *Installing VNC for MAC OS X*

To install VNC for Mac, perform the following steps:

1. Install VNC using OSXvnc1.33.dmg
2. Configure the VNC password to **password** (all lower case) as described above in the Windows installation section.

## Control Web Pages, continued

### Open Access Session

If **Remote View** is configured to open access, you have the ability to share your screen with someone else without any restrictions.

The following image displays an example of the **Remote View** control page configured as open access:

The screenshot shows the EBS-N200 Network Display Adaptor control interface. At the top, it displays device information: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Power On. On the left, there is a 'Control Pages' sidebar with buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. The main area is titled 'Remote View Commands' and contains an IP Address field (192.168.0.11), a Change Resolution dropdown menu (Default), and a Lock Session checkbox (unchecked). Below these are 'Connect' and 'Disconnect All' buttons. A 'Before connecting' section provides instructions: 1. If you don't have VNC software installed, click here; 2. Make sure VNC server is running on your computer; 3. Change your VNC server password to "password".

To connect to an open access remote view session, perform the following steps:

1. In the **IP Address** field, verify the IP address is the address of your computer.
2. In the **Resolution** field, select the resolution equal to the resolution on the display of your computer. This will display the best image possible on the display.
3. Check the **Lock Session** checkbox if you want to be the only person able to disconnect yourself from the remote view session. If you do not check the checkbox, someone else can disconnect you from the session.
4. Click the **Connect** button. Your screen displays on the display.
5. Begin your conference or presentation.

To disconnect an open access remote view session, perform the following steps:

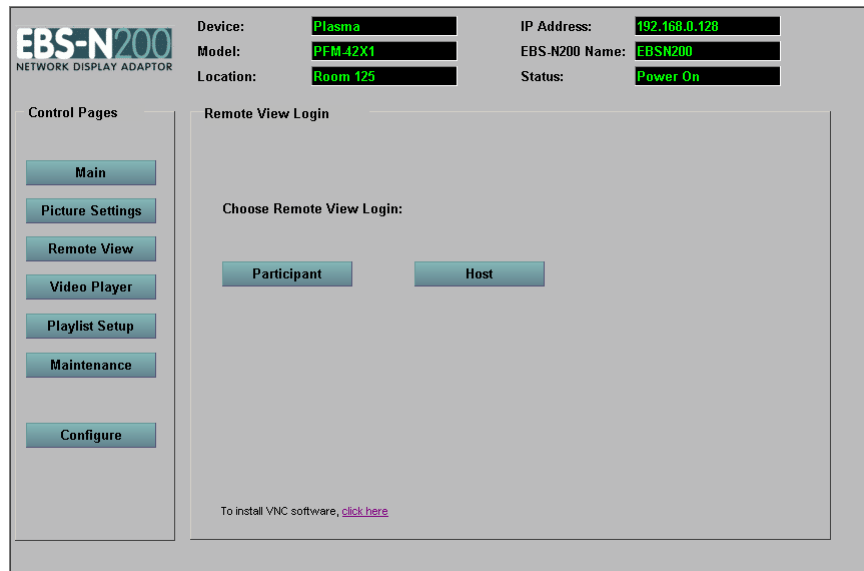

1. Click the **Disconnect All** button.

## Control Web Pages, continued

### Hosted Session

If **Remote View** is configured to hosted, you must log in to participate in the conference or presentation. You can login as a participant or as the host. If you log in as the host, you control which participant is connected to the display. When a participant is connected, that participant's desktop is shared with the audience.

The following image displays an example of the **Remote View** control page configured as hosted:

## Control Web Pages, continued

### Hosted Session – Participant Login

To login to a remote view session as a participant, perform the following steps:

1. Click the **Participant** button. The following screen displays:

The screenshot shows the EBS-N200 Network Display Adaptor web interface. At the top, the device information is displayed: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Power On. On the left, there is a 'Control Pages' sidebar with buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. The main content area is titled 'Remote View Login' and contains the text 'Please enter your name:' followed by a text input field and a 'Submit' button.

2. Enter your name and then click the **Submit** button. You are now logged in to the conference and the following screen displays:

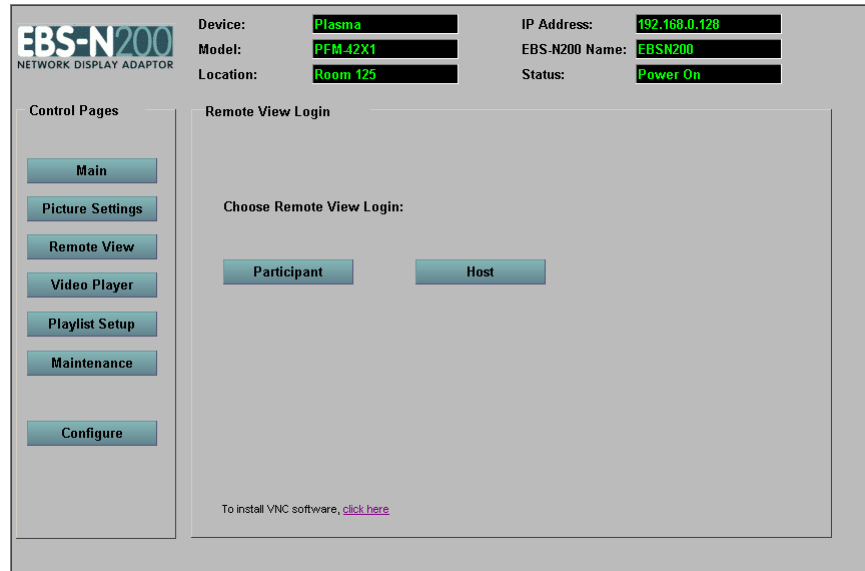

The screenshot shows the EBS-N200 Network Display Adaptor web interface after login. The device information at the top remains the same. The 'Control Pages' sidebar is identical. The main content area is titled 'Remote View Commands' and displays the message: 'You are logged-in to a hosted conference. Please wait for the host.' Below this, there is a section titled 'Before connecting:' with three numbered instructions: 1. If you don't have VNC software installed, [click here](#); 2. Make sure VNC server is running on your computer; 3. Change your VNC server password to "password".

## Control Web Pages, continued

### Hosted Session – Host Login

The host connects and disconnects participants from the display.

The following image displays an example of the **Remote View** control page configured as hosted:

To login to a remote view session as a host, perform the following steps:

1. Click the **Host** button. If you are logged in to the EBS-N200 software application as a user, the following screen displays. If you are logged in as an administrator or no EBS-N200 passwords are required, proceed to step 4.

## Control Web Pages, continued

### Hosted Session – Host Login, continued

The screenshot shows the EBS-N200 control web page. At the top, the device information is displayed: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Power On. On the left, there is a 'Control Pages' menu with buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. The main content area is titled 'Login to EBSN200' and contains a 'Log in as:' dropdown menu set to 'Remote View Host', a 'Password:' input field, and a 'Submit' button.

2. In the **Password** field, enter your host password. If you do not have a password, you cannot log in to Remote View as a host.
3. Click the **Submit** button. The following screen displays:

The screenshot shows the EBS-N200 control web page with the 'Remote-View Host Page' selected. The device information at the top is the same as in the previous screenshot. The 'Control Pages' menu is on the left. The main content area is titled 'Remote-View Host Page' and includes a 'Change Resolution:' dropdown menu set to 'Default'. Below this is a table with columns for 'Select', 'Participant Name', 'IP Address', and 'Display'. The table contains three rows: 'Asa' (IP: 192.168.0.22), 'Grant' (IP: 192.168.0.33), and 'Host' (IP: 192.168.0.11). Below the table, there is a section for manually adding participants: 'Or, enter new participant manually and click Add:' with an input field and a '0' in the 'Display' column. At the bottom, there are buttons for 'Connect', 'Disconnect', 'Remove', 'Add', 'Refresh', and 'Clear'.

Select	Participant Name	IP Address	Display
<input type="radio"/>	Asa	192.168.0.22	0
<input type="radio"/>	Grant	192.168.0.33	0
<input type="radio"/>	Host	192.168.0.11	0

## Control Web Pages, continued

### *Hosted Session – Host Login, continued*

4. In the **Resolution** field, select the resolution equal to the participant's screen resolution. This will display the best image possible on the display.

**Note:** Whenever you connect a different participant, you should verify the resolution and change it, if necessary.

5. This screen displays the participants logged into the session. Use the buttons at the bottom of the screen to control the session as follows:
  - **Connect** – To display a participant's screen on the display, select the radio button corresponding to a participant and then click the **Connect** button
  - **Disconnect** – To stop a participant's screen from displaying, select the radio button corresponding to that participant and then click the **Disconnect** button
  - **Remove** – To delete a participant from the list of participants on the host's screen, select the radio button corresponding to that participant and then click the **Remove** button
  - **Add** – To add another participant to a session, select the radio button just below **Or, enter new participant manually and click Add**, enter the participant's name and IP Address, and then click the **Add** button
  - **Refresh** – To view a current list of all participants, click the **Refresh** button
  - **Clear** – To log out all participants and clear the screen, click the **Clear** button

## Control Web Pages, continued

### Video Player

The **Video Player** control page allows you to select an existing set of audio or video files, called playlists, and play them on a display. Additionally, you can select to play only a specific file in a playlist. To create a new playlist or edit an existing playlist, use the **Playlist Setup** control page.

The following image displays an example of the **Video Player** control page:

### Player Commands

To select a playlist file and play it, perform the following steps:

1. In the **Select Playlist** field, select the playlist you want to play from the drop-down list.
2. In the **Playlist Index** field, if necessary, select the specific position at which you want the playlist to start from the drop-down list.
3. Click the **Play** button.

To stop a playlist from playing, perform the following steps:

1. Click the **Stop** button.

## Control Web Pages, continued

### Playlist Setup

---

The **Playlist Setup** control page allows you to combine video and image files, Web pages, and commands to create playlists. Additionally, you can edit existing playlists and remove playlists that you no longer need. Once you create a playlist, use the **Video Player** control page to play it on a display.

The following image displays an example of the **Playlist Setup** control page:

The screenshot shows the EBS-N200 Network Display Adaptor control interface. At the top left is the logo "EBS-N200 NETWORK DISPLAY ADAPTOR". To the right, system information is displayed: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.128, EBS-N200 Name: EBSN200, and Status: Power On. A left sidebar titled "Control Pages" contains buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup (highlighted), Maintenance, and Configure. The main area is titled "Playlist Edit" and features a "Select Playlist:" dropdown menu with "Create New Playlist" selected, a "Default" checkbox, and "Save As" and "Remove" buttons. Below this is a large empty box for playlist entries. To the right of this box is an "Edit Entry" section with "New", "Edit", and "Remove" buttons. At the bottom of the main area are "Up" and "Down" buttons.

## Control Web Pages, continued

### Creating a New Playlist

To create a new playlist, perform the following steps:

1. In the **Select Playlist** field, select **Create New Playlist** from the drop-down list.
2. Click the **New** button. The following screen displays:

The screenshot shows the EBS-N200 Network Display Adaptor web interface. At the top, there is a header with the device information: Device: Plasma, Model: PFM-42X1, Location: Room 125, IP Address: 192.168.0.120, EBS-N200 Name: EBSN200, and Status: Power On. Below the header is a sidebar with a 'Control Pages' menu containing buttons for Main, Picture Settings, Remote View, Video Player, Playlist Setup, Maintenance, and Configure. The main area is titled 'Playlist Edit' and features a 'Select Playlist' dropdown menu set to 'Create New Playlist', a 'Default' checkbox, and 'Save As' and 'Remove' buttons. Below this is a large empty list area with 'Up' and 'Down' buttons at the bottom. To the right of the list is an 'Edit Entry' panel with a 'Select Entry Type' dropdown menu, 'New', 'Edit', and 'Remove' buttons, and a '<< Add' and 'Cancel' button.

3. In the **Select Entry Type** field, select the entry type from the drop-down list.
4. You will be prompted to enter additional information associated with the entry type you select. Enter that information, as appropriate. For example, if you select a **Schedule On** entry type, you must enter the start date and time.
5. Click the **Add** button. The entry will display on the left side of the screen.
6. Repeat steps 3 through 5, as necessary, until you finish creating a playlist.

**Note:** Use the **Up** and **Down** buttons to change the position of the entries in the list, if necessary.

## Control Web Pages, continued

### Creating a New Playlist, continued

7. Click the **Save As** button to name and save the playlist.  
The following screen displays:

8. Enter a name for the playlist.
9. Click the **OK** button.

## Control Web Pages, continued

### Editing an Existing Playlist

To edit an existing playlist, perform the following steps:

1. In the **Select Playlist** field, select the playlist you want to edit from the drop-down list.
2. On the left side of the screen in the list of entries, select the entry you want to edit.
3. Click the **Edit** button.
4. The existing details of that entry display on the right side of the screen in the **Edit Entry** section. Change the information, as necessary.
5. Click the **Update** button.

**Note:** To remove an entry from the playlist, select the entry you want to remove and click the **Remove** button.

6. Repeat steps 2 through 5, as necessary, until you finish editing the playlist.

**Note:** Use the **Up** and **Down** buttons to change the position of the entries in the list, if necessary.

7. Click the **Save As** button to save the playlist. The following screen displays:

8. Enter a new name for the playlist or accept the existing name.
9. Click the **OK** button.

### Deleting an Existing Playlist

To delete an existing playlist, perform the following steps:

1. In the **Select Playlist** field, select the playlist you want to delete from the drop-down list.
2. Click the **Remove** button.

## Control Web Pages, continued

### Entry Types

When you create a new playlist or edit an existing playlist, you must select the entry type that you want to either add to the playlist or edit. The entry type determines the additional information you will be prompted to enter.

### File

When you select **File** from the **Select Entry Type** drop-down list, it instructs the play engine to play the file on the display connected to the RGB input. The main purpose of this is for the play engine to determine which display method is used to present the information.

Refer to the following table for a description of the available fields and options:

Field/Option	Description
Type path or browse for a clip	Enter the file name that you want to add to the playlist or click the <b>Browse</b> to locate it.
File Type (optional)	Select the file format. The play engine determines the file type by file extension, however, you can select a type from the drop-down list to override the default handling.
Duration [sec, min, hours, days, weeks]	Enter the time for which you want to play the file, if applicable.
Accelerator	This box is checked by default and allows accelerated access of media files without setting up user account and password on remote server.

## Control Web Pages, continued

### Event

When you select **Event** from the **Select Entry Type** drop-down list, it controls the internal play engine. After you select **Event**, you must select the event type from the drop-down list.

Refer to the following table for a description of the available options in the **Select Event Type** field drop-down list:

Event Type	Description
Screen Saver	Select <b>Screen Saver</b> to place the display into a screen saver mode. Then, in the <b>Screen Saver Mode</b> field, select the mode, such as orbit, inversion, gray, dark gray, or black.
Input	Select <b>Input</b> to specify the input number you want the display to access for video input. Then, in the <b>Select Input</b> field, select the input number from the drop-down list.  <b>Note:</b> Input numbers are mapped to actual inputs using the <b>Input Mapping</b> screen on the <b>Configure</b> control page.
Power	Select <b>Power</b> to specify the status of the display, such as on or off. Then, in the <b>Power Command</b> field, select <b>Power On</b> or <b>Power Off</b> from the drop-down list.
Pause	Select <b>Pause</b> to temporarily stop the current playlist.

## Control Web Pages, continued

*Event, continued*

Event Type	Description
Switch	Select <b>Switch</b> to link playlists and change the active playlist. In the <b>Switch Playlist/Index</b> field, enter the playlist to which you want to switch. Then, in the <b>Enter Playlist Index (optional)</b> field, enter the point at which you want to begin playing the playlist (the default is <b>1</b> , which represents the beginning)
Delay [sec, min, hours, days, weeks]	Select <b>Delay</b> to enter the wait time before executing the next command line in the playlist. For example, when powering up the display, it might take several seconds before the picture is visible, so you could delay the playlist and allow time for the screen to warm up. In the <b>Enter Delay</b> field, enter the time you want to wait before proceeding to the next command in the playlist.

## Control Web Pages, continued

*Event, continued*

Event Type	Description
Resolution	Select <b>Resolution</b> to allow the play engine to dynamically change the format of the output. For example, if an mpeg file compressed at 1080i is followed by a compressed 720p file, you might want to change the resolution in the playlist to match the resolution to the format of the original source. In the <b>Enter Resolution X and Y</b> field, select the resolution from the drop-down list.

## Control Web Pages, continued

### ***Comment***

Select **Comment** to enter free form text into the playlist.

### ***Playlist Initiate***

The **Playlist Initiate** time is initial time at which the playlist will commence. A second optional parameter, **Repeat Rate (optional)** is used to determine how often the playlist is to repeat (ie once a day, once and hour, etc).

### ***Playlist Duration***

The **Playlist Duration** is the amount of time for which the playlist will play for the particular session until the next **Repeat Rate** interval

### ***Playlist Terminate***

The **Playlist Terminate** time is the time at which the playlist will terminate irregardless of the **Repeat Rate** interval.

### ***Loop***

Select **Loop** to jump to the top of the playlist, and run the playlist from the beginning again without any interruption.

## Control Web Pages, continued

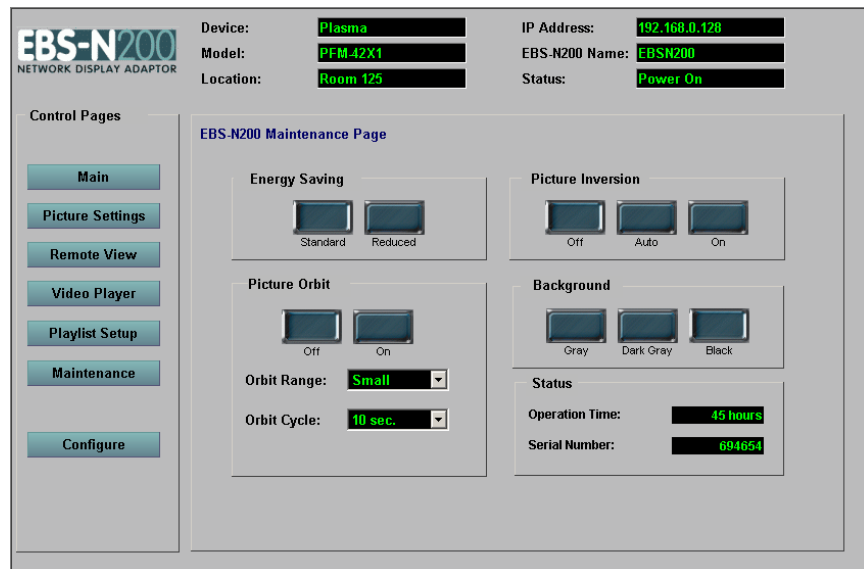

### Maintenance (Plasma only)

The **Maintenance** control page contains the following sections:

- Energy Saving
- Picture Inversion
- Picture Orbit
- Status
- Screen Saver

**Note:** The options available to select in this section are determined by the display device and model selected.

The following image displays an example of the **Maintenance** control page:

### Energy Saving

The **Energy Saving** section allows you to select the amount of energy a display uses.

To switch from one mode to another, perform the following steps:

1. In the **Energy Saving** section, press the **Standard** button to change the display to the standard energy setting or press the **Reduced** button to reduce the amount of energy used by the display.

## Control Web Pages, continued

### Picture Inversion

The **Picture Inversion** section helps protect against residual image from still pictures. It allows you to turn the picture from a positive to a negative. Using the original image source, picture inversion evens out the residual picture image.

To turn on picture inversion, perform the following steps:

1. In the **Picture Inversion** section, press the **On** button to immediately activate picture inversion. Alternately, press the **Auto** button to activate picture inversion after a predetermined amount of time. For more information on the Auto functionality, refer to the user's manual for the plasma.

To turn off picture inversion, perform the following steps:

1. Press the **Off** button.

### Picture Orbit

The **Picture Orbit** section helps protect against residual image from still pictures. It allows you to determine how the picture rotates around the screen incrementally and the amount of time it takes to complete a full cycle. Since the video moves in small increments, if there is a lot of motion in a video, this is almost unnoticeable. You can select any combination of range and time intervals.

To turn on picture orbit, perform the following steps:

1. In the **Orbit Range** field, select **Small**, **Middle** or **Large** from the drop-down list. This determines how the screen saver rotates around the screen. For example, if you want the screen saver to move within a small range, select **Small**.
2. In the **Orbit Cycle** field, select the amount of time in which you want the screen saver to complete a full cycle around the screen.
3. Press the **On** button.

To turn off picture orbit, perform the following steps:

1. Press the **Off** button.

## Control Web Pages, continued

### Screen Saver (X1 only)

The **Screen Saver** section provides three options to help prevent screen burnout. These options are gray, dark gray, and black. Black is the default.

To change the screen saver, perform the following steps:

1. Press the **Gray**, **Dark Gray**, or **Black** button corresponding to the screen saver you want to select.

## Appendix A

### Playlist File Format

---

#### Section 1 – Control

[Control]            -- Title  
ScheduleOn = time[,repeatRate]  
ScheduleOff = relativeTime  
Image= ***filename***

The ScheduleOn time is the time (encoded 64 bit number) at which the playlist is to start. A second optional parameter, repeatRate is used to determine how often this playlist is to repeat. The default is 0, which equates to a looping playlist. The repeat rate is preceded by a letter denoting time unit used: S for seconds, M for minutes, H for hours, D for days, W for weeks. For example, to specify 10 minutes, use M10.

The optional ScheduleOff time is the time to turn the playlist off after relativeTime. The format of this value is the same as “Repeat Rate” above.

The Image option points to a file that represents the playlist, example DVD playlist in which this image points to a jpeg of the cover. This is optional.

The Loop option jumps to the top of the playlist, and runs the playlist from the beginning again without any interruption.

#### Section 2 – List

[List]

Entry*N* = FILE,***filename*** [,***duration***][, ***type***]

This entry instructs the play engine to present the file given to the monitor connected to the RGB connection. The main purpose of this is for the Play Engine to determine which display method is used to present the information. The Duration, in units selectable by the first character (S30 = 30 seconds, M10 = 10 minutes, H3 = 3 hours, D1 = one day, W2 = two weeks) , is used to determine how long the item is to be displayed. The Type option represents the format of the file, see Table 1 for the supported types. The Play Engine will determine file type by file extension; the Type option can be used to override default handling. If *filename* begins with string “tcp://”, the accelerator software will be used to serve the file.

## Appendix A, continued

### Playlist File Format, continued

---

EntryM = EVENT, *eventType*[, *options*]

These items are used to control the internal Play Engine. The following table contains the supported event types.

EventType	Options	Description
ScreenSaver	Mode	Place display into screen saver mode (1)
Input	#	Select input (2)
Power	ON/OFF	Turn display on or off – default is ON
Pause		Pauses the current playlist
Switch	Playlist[,index]	Execute another playlist with an optional Index
Delay	Time	Waits before executing the next entry

(1) Uses a table of supported modes

(2) Input table is valid, input mappings must be setup in the Web site

## Appendix A, continued

### Playlist File Format, continued

---

**Screen Saver** - The Screen Saver Mode places the display into an internal Screen Saver Mode, i.e. ORBIT, INVERSE SCREEN, etc. The mode is an index into a ScreenSaver table that has the various mode supported by the display. The default is ON. To disable the Screen Saver mode the value of OFF is used as the optional value.

**Input** - The Input command selects the input for which the display used for video input. The number is an index into the Input Table which is setup via the website.

**Power** - The Power command powers the display either On or Off depending on the state of the option. The default option is ON.

**Pause** - This command pauses the current playlist. To resume the playlist from this state is to receive a Trigger command from an external source.

**Switch** - The Switch command allows the linking of playlists. The execution of this command changes the active playlist. A second option, index is used to determine the entry point, or the start of execution of the given playlist. The default Index is 0, the beginning of the playlist.

**Delay** - This commands allows the playlist to wait time described by time unit and a number before executing the next command line in the List Section. This is useful command for example upon powering up the display, the picture may not be visible for several seconds, so the playlist must be delayed for the screen to warm-up.
