

# Compact **Tools** for **Jobs** of all Sizes

Symetrix introduces a new series of **flexible** half-rack audio tools for contractors. The Symetrix **300 Series** offers installed sound system engineers **precise** solutions to a wide range of audio design and interface problems. These **affordable** building-blocks deliver exactly what you need to complete jobs (and budgets) of any size:

**301 Low Distortion Comp/Limiter:** A mono comp/limiter with unique circuitry that eliminates secondary causes of distortion during compression.

**302 Dual Microphone Preamp:** An update of the classic Symetrix SX202 design. Like its predecessor, it delivers solid stereo imaging, excellent transient response, very low noise and almost undetectable distortion.

**303 Interface Amplifier (Bi-directional):** A stereo level matching amplifier that converts consumer level audio of -10dBV to a +4dBu level, or vice-versa, allowing pro audio equipment to work with consumer gear.

**304 Headphone Amplifier:** A stereo in/four output amp that drives headphones of any impedance. Its compact design is ideal for translation service installations and control rooms.

**305 Distribution Amplifier (1x4):** A one input/four output design that includes a four-segment LED input meter, individual trim pots for input and output levels, and Euroblock terminal connectors for quick installation. Precision circuitry yields THD+Noise of less than .009%.

**307 Dual Isolation Transformer:** A one input/two output isolation box that breaks up ground loops and improves overall system performance.

Each unit provides an answer to your specific installation demands. Design any of these pint-sized powerhouses into your next job, and look for additional 300 Series designs soon.
