## **SymNet** | Network Audio Solutions

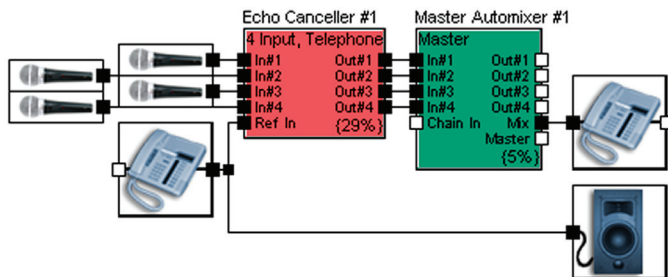

### What's It About

#### Echo Cancellation Demos:

#### Live on the Tradeshow Floor!

Symetrix will present their new Acoustic Echo Cancelling technology for the SymNet | Network Audio Solution at NSCA 2006 in Las Vegas, NV.

This brand new approach meets the challenges of acoustic echo cancelling for the installed sound market. Echo cancelling modules are easily placed into a SymNet design just like any other module eliminating the direct tie to specific hardware inputs and avoiding a per-channel cost. There are a number of echo cancelling resolutions provided in order to handle anything from phone systems to room-to-room conferencing which require full 20 Hz - 20 kHz operation. Symetrix will demonstrate a small echo cancelling system live on the show floor. Attendees will be able to conference with the Symetrix booth to experience the technology in action, so be sure to bring your cell phone! Stop by booth 2237 to get more information or set up your personal demo.

**Visit us at NSCA, Booth 2237!**

### What's New?

#### SIA SmartLive! Support

SymNet Designer 7.0 will feature a new class of modules to be known as "Loud Speaker Mangers". Two versions of the modules will be available in mono and stereo - one which functions just as any other stand-alone DSP module, and another which is "Smaart-Compatible". That is, they can be controlled directly from SIA software's SmaartLive! in order to tune a room to a level of precision and expediency previously unavailable in an open-architecture DSP platform. Stop by the booth or watch the web site for further developments!

*SymNet Designer 7.0 is scheduled for a June 2006 release.*

### Where It's At

#### NSCA - National Systems Contractors Association

Systems Integration Expo

March 14 - 18, 2006

Las Vegas Convention Center, Las Vegas, NV
