August 25, 2000

Dear Dealer,

You asked for it, and we listened. You said you wanted a more RF robust, yet still cost effective VHF wireless intercom system. Well here it is. Telex[®] Communications is proud to announce the new RadioCom[™] BTR-300/TR-300 wireless intercom system. The BTR-300/TR-300 is the next generation in VHF wireless intercom technology and the replacement for the industry standard BTR-200.

Because the available RF spectrum is becoming more crowded at an alarming rate, the new BTR-300/TR-300 wireless intercom system is the first wireless intercom to be designed specifically with DTV band allocations in mind. It has improved front end filtering that allows the BTR-300/TR-300 to be used in hostile RF environments where other wireless intercoms simply can't function. Additional filtering capabilities and unique channel assignments now allow up to four base stations and 16 individual belt packs to be used simultaneously in virtually any location, that's double the belt packs of the BTR-200/TR200.

In addition to superior RF performance, the TR-300 wireless belt pack now offers optional NiMH (Nickel Metal Hydride) rechargeable batteries with two charging methods. Using a new charging jack located on the TR-300 you can now charge batteries right in the belt pack, great for overnight charging. In addition you can still remove the batteries and charge them separately when continuous duty operation is required. As an added benefit, both chargers are included when you purchase the NiMH battery option. NiMH batteries now provide 12 hours of continuous belt pack operation while alkaline AA's now offer an amazing 18 hours of battery life!

Because you said you wanted it to be easier to interface to existing hardwired intercom systems, the BTR-300 now offers advanced intercom audio interface circuitry that allows simple, seamless two-way operation with all major intercom brands. Combine this with a new ergonomically designed user interface and you have a device that can truly simplify your business life.

Now for the best part, you get all this increased performance for your customers at no additional cost to you. That's right, Telex is offering the new BTR-300/TR-300 at the same low BTR-200/TR-200 price. You will be receiving new price lists that contain all of the appropriate part number and accessory information soon, but for now we have included the cut sheet for your convenience in familiarizing yourself and staff with this innovative new product.

We look forward to serving your needs and those of you customers. Please don't hesitate to call on our experienced team of customer service professionals to answer any questions you may have.

Best regards,

Thomas Hansen
