

NMP-500

**NETWORK MEDIA PLAYER
FOR DIGITAL SIGNAGE APPLICATIONS**

Dynamic Digital Signage.

ViewSonic's NMP-500 Network Media Player turns any display into a digital signage display. It's an IP-based media player with MPEG-1/2/4 video stream capability for digital signage applications. The Media Player replaces remote PCs. It's small and lightweight, yet powerful enough for digital signage applications in hotels, restaurants, retail stores, arenas, stadiums, transportation centers, schools, financial institutions and manufacturing. The powerful processor delivers smooth playback of high-definition video and Flash™ content. The NMP-500 is equipped to handle many layers of high-quality graphics, text, and video and is a cost-effective solution. From Macromedia® Flash to HTML, and from video to still pictures, it's all available and easy to present with the NMP-500 Network Media Player.

MAKE YOUR MESSAGE COME ALIVE

> Network ready for easy installation

Easily integrates into existing network without replacing or reconfiguring existing infrastructure. Supports a wide variety of digital display components and multi-vendor networks.

> Easy audio and video streaming with content-rich video and graphics

Display dynamic and captivating content with the included Macromedia Flash 6. Decodes MPEG-1/2/4, WAV audio/video formats.

> Versatile content presentation

Display unique or consistent content on displays throughout the network. Flexible display modes enable you to show content in landscape or portrait mode, and in single or multiple zones on each display within the network.

> Web-based user interface and built-in browser

Allows changes to network, video and browser settings, even firmware upgrades through the media player. The built-in web browser lets users render any HTML content and play Macromedia Flash applications.

> Lower total cost of ownership (TCO)

Eliminates local/remote PCs. Offers simplified cabling and installation and easy-to-use software.

> Easy, flexible device management

Remotely manage display and network information through the user-friendly web interface, Telnet, Tivella Administration Server (TAS) or Cisco management software.
