Trademarks

Lucent Technologies has made every effort to supply the following trademark information about company names, products, and services mentioned in the Intuity CONVERSANT documentation library:

• AT&T — Registered trademarks: Truevoice.
Copyright and Legal Notices

- CLEO Communications — Trademarks: LINKix.
- Intel Corporation — Registered trademarks: Pentium.
- Interface Systems, Inc. — Trademarks: CLEO.
- International Business Machines Corporation — Registered trademarks: IBM, VTAM.
- Microsoft Corporation — Registered trademarks: Excel, Internet Explorer, Microsoft, MS, MS-DOS, Windows, Windows NT.
- Minnesota Mining and Manufacturing — Trademarks: 3M.
- Netscape Communications — Trademarks: Netscape Navigator.
- Novell, Inc. — Registered trademarks: Novell.
Copyright and Legal Notices

- Santa Cruz Operation, Inc. — Registered trademarks: UnixWare.
- UNIX System Laboratories, Inc. — Registered trademarks: UNIX.
- Veritas Software Corporation — Trademarks: VERITAS.
- Xerox Corporation — Trademarks: Ethernet.

Limited Warranty

Lucent Technologies provides a limited warranty on this product. Refer to the “Limited Use Software License Agreement” card provided with your package.

Lucent Technologies has determined that use of this electronic data delivery system cannot cause harm to an end user’s computing system and will not assume any responsibility for problems that may arise with a user’s computer system while accessing the data in these document.

Every effort has been made to make sure that this document is complete and accurate at the time of release, but information is subject to change.

United States FCC Compliance Information

Part 15: Class A statement. This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.
Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

This digital apparatus does not exceed the Class A limits for radio noise emissions set out in the radio interference regulations of the Canadian Department of Communications.

Le Présent Appareil Nomérique n’émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la class A préscrites dans le règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

GENERAL WARNING: The grant of a Telepermit for any item of terminal equipment indicates that only Telecom has accepted that the item complies with minimum conditions for connection to its network. It indicates no endorsement of the product by Telecom, nor does it provide any sort of warranty. Above all, it provides no assurance that any item will work correctly...
in all respects with other items of Telepermitted equipment of a different make or model, nor does it imply that any product is compatible with all of Telecom’s network services.

IMPORTANT NOTICE: Under power failure conditions, this device may not operate. Please ensure that a separate telephone, not dependent on local power, is available for emergency use.

AUTOMATIC RE-ATTEMPTS TO THE SAME NUMBER: Some parameters required for compliance with Telecom’s Telepermit requirements are dependent on the equipment (PC) associated with this device. The associated equipment shall be set to operate within the following limits for compliance with Telecom specifications:

• There shall be no more than 10 call attempts to the same number within any 30 minute period for any single manual call initiation, and,

• The equipment shall go on-hook for a period of not less than 30 seconds between the end of one attempts and the beginning of the next attempt.

AUTOMATIC CALLS TO DIFFERENT NUMBERS: Some parameters required for compliance with Telecom’s Telepermit requirements are dependent on the equipment (PC) associated with this device. In order to operate within the limits for compliance with Telecom specifications, the associated equipment shall be set to ensure that automatic calls to different numbers are spaced such that there is not less than 5 seconds between the end of one call attempt and the beginning of the next attempt.
USER INSTRUCTIONS (AUTOMATIC CALL SETUP): This equipment shall not be set up to make automatic calls to the Telecom "111" emergency service.

CALL ANSWERING (AUTOMATIC ANSWERING EQUIPMENT): Some parameters required for compliance with Telecom’s Telepermit requirements are dependent on the equipment (PC) associated with this device. In order to operate within the limits for compliance with Telecom specifications, the associated equipment shall be set to ensure that calls are answered between 3 and 30 seconds of receipt of ringing.

Toll Fraud

Toll fraud is the unauthorized use of your telecommunications system by an unauthorized party, for example, persons other than your company’s employees, agents, subcontractors, or persons working on your company’s behalf. Note that there may be a risk of toll fraud associated with your telecommunications system and, if toll fraud occurs, it can result in substantial additional charges for your telecommunications services.

Your Responsibility for Your System’s Security

You and your system manager are responsible for the security of your system and for preventing unauthorized use. You are also responsible for reading all installation, instruction, and system administration documents provided with this product in order to fully understand the features that can introduce risk of toll fraud and the steps that can be taken to reduce that risk. Lucent Technologies does not warrant that this product is immune from or will
Copyright and Legal Notices

prevent unauthorized use of common-carrier telecommunication services or facilities accessed through or connected to it. Lucent Technologies will not be responsible for any charges that result from such unauthorized use.

Lucent Technologies Fraud Intervention and Corporate Security

If you suspect that you are being victimized by toll fraud and you need technical support or assistance, call the Lucent Technologies National Customer Care Center Toll Fraud Intervention Hotline at 1 800 643-2353.

Aside from whether immediate support is required, all toll fraud incidents involving Lucent products or services should be reported to Lucent Corporate Security at 1 800 821-8235. In addition to recording the incident, Lucent Corporate Security is available for consultation on security issues, investigation support, referral to law enforcement agencies, and educational programs.

To order a document, contact the Lucent Technologies Publications Center and specify the 9-digit document number, the issue number, and the issue date.

Overview

This book contains information for troubleshooting and diagnosing problems associated with the Intuity CONVERSANT MAP/40P and hardware. It also includes component replacement procedures as well as installation procedures for base system software, Intuity CONVERSANT system software, and optional feature software. Appendices contain a system configuration description, a list of component ordering numbers, a checklist for building a system, and checklists for disaster recovery.

Note: To repair or alter the configuration of your system, you must have a copy of this book.
Intended Audience

This book is intended primarily for the on-site service technician and system administrators. Secondary audiences include the following:

- Field support — Technical Service Organization (TSO)
- Lucent Technologies Helpline personnel

We assume that the primary users of this book have completed the MAP/40P hardware installation training course (see Training on page xxxix).

How to Use This Book

This book is designed to help you maintain your Intuity CONVERSANT system. It should be used as a quick-reference to obtain specific information you may need on a particular topic.

How This Book Is Organized

This book contains the following sections:

- Chapter 1, Getting Inside the Computer — Describes how to access the internal components of the MAP/40P and describes proper electrostatic discharge protection procedures, power removal and restoration procedures, and computer chassis access procedures.
About This Book

• Chapter 2, Installing or Replacing Circuit Cards — Provides the procedures to install circuit cards and set the resource options correctly.

• Chapter 3, Replacing the Hard Disk Drive — Provides the procedures to identify a failed hard disk drive, hardware procedures to replace the drive, and software procedures to initialize the drive.

• Chapter 4, Replacing Other Components — Provides the procedures to replace internal components of the MAP/40P, including the backplane, cables, cartridge tape drive, circuit card cage fans, diskette drive, filter, memory modules, power supplies, and terminator SIPs.

• Chapter 5, Installing the Tip/Ring Distribution Hardware — Describes the two types of Tip/Ring distribution hardware and provides the installation procedures for them.

• Chapter 6, Installing Base System Software — Provides the installation procedures for the UnixWare operating system software.

• Chapter 7, Installing the Intuity CONVERSANT System Software — Provides the installation procedures for the Intuity CONVERSANT system software.

• Chapter 8, Installing the Optional Feature Software — Provides the procedures to install all the software not included on the application software cartridge tape.
About This Book

- Appendix A, System Configuration — Describes placement of components in the MAP/40P and operation of the Hardware Resource Allocator.
- Appendix B, Component Ordering Numbers — Lists the ordering numbers for MAP/40P components.
- Appendix C, How to Build a System Using This Book — Provides a checklist detailing the sequence of operations for building an Intuity CONVERSANT MAP/40P platform.
- Appendix D, Disaster Recovery Checklists — Includes checklists for various disaster recovery scenarios.
- Glossary — Defines the terms, abbreviations, and acronyms used in system documentation.
- Index — Alphabetically lists the principal subjects covered in the book.

Conventions Used in This Book

Understanding the typographical and other conventions used in this book is necessary to interpret the information.
About This Book

Conventions Used in This Book

Terminology

• The word “type” means to press the key or sequence of keys specified. For example, an instruction to type the letter “y” is shown as
  Type y to continue.

• The word “enter” means to type a value and then press the ENTER key on the keyboard. For example, an instruction to type the letter “y” and press ENTER is shown as
  Enter y to continue.

• The word “select” means to move the cursor to the desired item and then press ENTER. For example, an instruction to move the cursor to the start test option on the Network Loop-Around Test screen and then press ENTER is shown as
  Select Start Test.

• The system displays menus, screens, and windows. Menus allow you to select options or to choose to view another menu, screen, or window (Figure 1 on page xxxi). Screens and windows both show and request system information (Figure 2 on page xxxi through Figure 5 on page xxxiii).

  Note: Screens shown in this book are examples only. The screens you see on your machine will be similar, but not exactly the same.
About This Book

```
  Shut Down the Machine

  Users currently logged on:
  root console Jul 8 06:39
  root pts000 Jul 8 08:48
```
In order to install UnixWare, you must reserve a partition (a portion of your hard disk’s space) on your primary hard disk for the UNIX System. After you press ‘ENTER’ you will be shown a screen that will allow you to create new partitions, delete existing partitions or change the active partition of your primary hard disk (the partition that your computer will boot from).

WARNING: All files in any partition(s) you delete will be destroyed. If you wish to attempt to preserve any files from an existing UNIX System, do not delete its partition(s).

The UNIX System partition that you intend to use on the primary hard disk must be at least 120 MBs and labeled ‘ACTIVE.’
About This Book

Conventions Used in This Book

Figure 5. Example of a CONVERSANT Screen Requesting Information

You may use a partition of your secondary hard disk. If you choose to use a partition of your secondary hard disk you will be shown a screen that will allow you to partition your secondary hard disk.

WARNING: All files in any partition(s) you delete will be destroyed.
If you choose to create a UNIX System partition on your secondary hard disk, it must be at least 40 MBs.
Your Options are:

1. Do not use a partition of the secondary hard disk for the UNIX System.
2. Use a partition of the secondary hard disk for the UNIX System.

Press ‘1’ or ‘2’ followed by ‘ENTER’.

Keyboard and Telephone Keypad Representations

- Keys that you press on your terminal or PC are represented as small capitalized BOLD text. For example, an instruction to press the enter key is shown as:

  Press ENTER.
Two or three keys that you press at the same time on your terminal or PC (that is, you hold down the first key while pressing the second and/or third key) are represented in small capitalized **BOLD** text. For example, an instruction to press and hold the Alt key while typing the letter "d" is shown as:

Press **ALT + D**.

Function keys on your terminal, PC, or system screens, also known as soft keys, are represented as small capitalized **BOLD** text followed by the function or value of that key enclosed in parentheses. For example, an instruction to press function key 3 is shown as:

Press **F3 (Choices)**.

Keys that you press on your telephone keypad appear in small capitalized **BOLD** text. For example, an instruction to press the first key on your telephone keypad is shown as:

Press **1** to record a message.

**Cross References and Hypertext**

**Blue underlined** type indicates a cross reference or hypertext link that takes you to another location in the document when you click on it with your mouse.
About This Book

Conventions Used in This Book

Screen Displays

• Values, system messages, field names, and prompts that appear on the screen, and simulated screen displays appear in typewriter-style constant-width type, as shown in the following examples:

Enter the number of ports to be dedicated to outbound traffic in the Maximum Simultaneous Ports field.

Alarm Form Update was successful.
Press <Enter> to continue.

• The sequence of menu options that you must select to display a specific screen or submenu is shown as follows:

Start at the Voice System Administration menu and select

> Reports
> Message Log Report

In this example, you would access the Voice System Administration menu and select the Reports menu. From the Reports menu, you would then select the Message Log Report window.
About This Book

Other Typography

 Commands and text you type in or enter appear in **bold type**, as in the following examples:

Enter `change-switch-time-zone` at the `enter` command: prompt.

Type `high` or `low` in the `Speed:` field.

- Command variables are shown in **bold italic** type when they are part of what you must type in and **blue italic** type when they are not, for example:

Enter `ch ma machine_name`, where `machine_name` is the name of the call delivery machine you just created.

- Command options are shown inside square brackets, for example:

Enter `connect switchname [-d] [-b | -w]`

Safety and Security Alert Labels

This book uses the following symbols to call your attention to potential problems that could cause personal injury, damage to equipment, loss of data, service interruptions, or breaches of toll fraud security:

⚠️ **CAUTION:**
Indicates the presence of a hazard that if not avoided can or will cause minor personal injury or property damage, including loss of data.
Getting Help

The Intuity CONVERSANT system provides online help to assist you during installation, administration, and application development tasks.

To use the online help:

- Press F1 (Help) when you are in a menu or window.
The first time you press F1, the system displays information about the currently active window or menu.
~ When you are in a window, the help explains the purpose of the window and describes its fields.
~ When you are in a menu, the help explains how to use menus.
If you press F1 again, the system displays a General Help screen that explains how to use the online help.
• Press F2 (Choices) when you are in a field.
  The system displays valid field choices either in a pop-up window or on the status line directly above the function keys.
• Press F6 (Cancel) to exit the online help.

Technical Assistance

Web Site
The following customer support web site contains resources where you can find solutions for technical problems:
http://support.lucent.com

Contact Numbers
Technical assistance on the Intuity CONVERSANT product is available through the following telephone contacts:
• In the United States, call 1-800-242-2121.
About This Book

- In Canada, call one of the following numbers, depending on your location:
  - 1-800-363-1882 for assistance in Quebec and eastern Canada
  - 1-800-387-4268 for assistance in Ontario and western Canada
- In any other country, call your local distributor or check with your project manager or systems consultant.

Related Resources

Additional documentation and training material is available for you to learn more about the Intuity CONVERSANT product.

**Training**

To obtain training on the Intuity CONVERSANT product, contact the BCS Education and Training Center at one of the following numbers:

- Organizations within Lucent Technologies (904) 636-3261
- Lucent Technologies customers and all others (800) 255-8988

You can also view information on Intuity CONVERSANT training at the Global Learning Solutions (GLS) web site at one of the following web links:

- Organizations within Lucent Technologies
  [http://training.gls.lucent.com](http://training.gls.lucent.com)
• Lucent Technologies customers and all others
  http://www.lucenttraining.com

The courses listed below are recommended. Other courses are available.

• For technicians doing repairs on Intuity CONVERSANT V7.0 systems
  ~ BTT509H, CONVERSANT Installation and Maintenance Voice Information System

• For technicians and administrators
  ~ BTC344M, Intuity CONVERSANT V7 Administration Overview (CD-ROM)

• For application developers
  ~ BTC128H, Introduction to Script Builder
  ~ BTC166H, Introduction to Voice@Work
  ~ BTC204H, Intermediate Voice@Work
  ~ BTC301H, Advanced CONVERSANT Programming

Note: Always refer to the appropriate book for specific information on planning, installing, administering, or maintaining an Intuity CONVERSANT system.

Additional Suggested Documentation
It is suggested that you also obtain and use the following book for information on security and toll fraud issues:

- GBCS Products Security Handbook, 555-025-600

For Troubleshooting Information
Basic troubleshooting information is in “Troubleshooting,” in the Intuity CONVERSANT System Reference, 585-313-205.

For Diagnostic Information
Instructions for conducting diagnostics are in “Diagnostics,” in the Intuity CONVERSANT System Reference, 585-313-205.

For Common System Procedures
Instructions for conducting common system procedures are in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.
For Installation Information
Instructions for installing or reinstalling system elements are in Intuity CONVERSANT System Version 7.0 New System Installation, 585-313-106.

Obtaining Printed Versions of the Documentation
See Documentation Ordering Information on page viii of Copyright and Legal Notices for information on how to purchase Intuity CONVERSANT documentation in printed form. You can also print documentation locally from the CD-ROM (see Printing the Documentation on page xliii).

Using the CD-ROM Documentation
Lucent Technologies ships the documentation in electronic form. Using the Adobe Acrobat Reader application, you can read these documents on a Windows PC, on a Sun Solaris workstation, or on an HP-UX workstation. Acrobat Reader displays high-quality, print-like graphics on both UNIX and Windows platforms. It provides scrolling, zoom, and extensive search capabilities, along with online help. A copy of Acrobat Reader is included with the documents.

Note: If viewing documents online, it is recommended that you use a separate platform and not the Intuity CONVERSANT system.
About This Book

Setting the Default Magnification
You can set your default magnification by selecting File | Preferences | General. We recommend the Fit Page option.

Adjusting the Window Size
On HP and Sun workstations, you can control the size of the reader window by using the -geometry argument. For example, the command string acroread -geometry 900x900 mainmenu.pdf opens the main menu with a window size of 900 pixels square.

Hiding and Displaying Bookmarks
By default, the document appears with bookmarks displayed on the left side of the screen. The bookmarks serve as a hypertext table of contents for the chapter you are viewing. You can control the appearance of bookmarks by selecting View | Page Only or View | Bookmarks and Page.

Using the Button Bar
The button bar can take you to the book’s Index, table of contents, main menu, and glossary. It also lets you update your documents. Click the corresponding button to jump to the section you want to read.

Using Hypertext Links
Hypertext links appears in blue underlined text. These links are shortcuts to other sections or books.

Navigating with Double Arrow Keys
The double right and double left arrows (and ) at the top of the Acrobat Reader window are the go-back and go-forward functions. The go-back button takes you to the last page you visited prior to the current page. Typically, you use to return to the main text from a cross reference or illustration.
| Searching for Topics | Acrobat has a sophisticated search capability. From the main menu, select **Tools | Search.** Then select **Master Index.** |
|----------------------|---------------------------------------------------------------------------------------------------------|
| Displaying Figures   | If lines in figures appear broken or absent, increase the magnification. You might also want to print a paper copy of the figure for better resolution. |
| Printing the Document | **Note:** For information on purchasing printed copies of the documents, see **Obtaining Printed Versions of the Documentation on page xlii.** |
|                      | If you would like to read the documentation in paper form rather than on a computer monitor, you can print all or portions of the online screens. |

**Printing an Entire Document**

To print an entire document, do the following:

1. From the documentation main menu screen, select one of the print-optimized documents. Print-optimized documents print two-screens to a side, both sides of the sheet on 8.5x11-inch or A4 paper.

2. Select **File | Print.**

3. Enter the page range you want to print, or select **All.** Note that the print page range is different from the page numbers on the documents (they print two to a page).

4. The document prints.
About This Book

5 Close the file. Do not leave this file open while viewing the electronic documents.

Printing Part of a Document
To print a single page or a short section, you can print directly from the online version of the document.

1 Select File | Print.

2 Enter the page range you want to print, or select Current.

The document prints, one screen per side, two sides per sheet.

How To Comment on This Book

While we have tried to make this document fit your needs, we are interested in your suggestions for improvement and urge you to send comments to us.
### Comment Form

A comment form, in paper and electronic versions, is available via the documentation CD-ROM. To use the comment form:

1. Select **Comments** from the Main Menu of the CD-ROM.
2. Follow the instructions provided on the CD-ROM to either:
   - Print the paper version of the form, complete it, and fax or mail it to us.
   - Access a Lucent Technologies website where you can enter your comments electronically.
About This Book

Contact Us Directly

If you prefer not to use the comment form, you can contact us directly at the following address or fax number.

Note: Direct your correspondence to the attention of the Lucent Technologies Intuity CONVERSANT writing team. Be sure to mention the title of the book on which you are commenting.

How To Comment on This Book
1 Getting Inside the Computer

Overview

This chapter provides the correct procedures for accessing the internal components of the MAP/40P.

Topics covered include:

• Protecting Against Damage from Electrostatic Discharge on page 2
• Power removal and restoration procedures
  ~ Removing Power from the MAP/40P on page 6
  ~ Restoring Power to the MAP/40P on page 10
• Computer chassis access procedures
  ~ Removing the Dress Cover on page 9
  ~ Replacing the Dress Cover on page 10
**Protecting Against Damage from Electrostatic Discharge**

⚠️ **CAUTION:**

Read this section before unpacking the MAP/40P. You must observe proper grounding techniques to prevent the discharge of static electricity from your body into ESD-sensitive components.

Circuit cards and packaging materials that contain ESD-sensitive components are usually marked with a yellow-and-black warning symbol (Figure 6 on page 2).

Figure 6. ESD Warning Symbol
To avoid damaging ESD-sensitive components, follow these rules:

- Handle ESD-sensitive circuit cards only after attaching a wrist strap to the bare wrist. Attach the other end of the wrist strap to a ground that terminates at the system ground, such as any unpainted metallic chassis surface.

- Handle a circuit card by the faceplate or side edges only (Figure 7 on page 4 and Figure 8 on page 5).

⚠️ CAUTION:

Ensure that your palm is not in contact with the non-component side of the board.

- Keep circuit cards away from plastics and other synthetic materials such as polyester clothing.

- Do not hand circuit cards to another person unless that person is grounded at the same potential level.

- Hold devices such as a hard disk, floppy drive, or streaming tape in the same manner as a large circuit card. The ESD-sensitive area of these components is located on the bottom surface (Figure 9 on page 6).
1 Getting Inside the Computer  Protecting Against Damage from Electrostatic Discharge

Figure 7. How to Hold a Small Circuit Card
1 Getting Inside the Computer  Protecting Against Damage from Electrostatic Discharge

Figure 8. How to Hold a Large Circuit Card
Removing Power from the MAP/40P

The MAP/40P requires a dedicated circuit with a dedicated circuit breaker. The power cord connects to the rear of the MAP/40P at the point labeled AC input receptacle (Figure 10 on page 7).

Before you begin any work in the MAP/40P you must disconnect the incoming power. Follow the procedure below to remove power from the MAP/40P.
1. Getting Inside the Computer

Removing Power from the MAP/40P

Figure 10. Back View of the MAP/40P

1. AC power inlet receptacle
2. AC power supply outlet
3. External SCSI I/O connector
4. Parallel port
5. COM2
6. Keyboard connector
7. Power supply fan exhaust
8. Mouse connector - (not used)
9. Video connector
10. COM1
1 Shut down the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

3 Turn off the monitor’s power switch.
   The green or amber lamp on the front bottom of the monitor should be off.

4 Turn off the power switch on the front of the MAP/40P.
   The green lamp, labeled POWER ON, on the front of the unit should be off.

5 Unplug the MAP/40P from the power outlet.

6 Remove the MAP/40P power cord from the AC input receptacle on the rear of the MAP/40P (Figure 10 on page 7).

7 Observe the correct lock-out/tag-out precautions for isolating power as outlined in the Lucent lock-out/tag-out procedure.
Removing the Dress Cover

The dress cover provides protection for the internal components of the MAP/40P. You must remove the dress cover to access these components.

**WARNING:**
Shut power off before removing the dress cover or access panel of the MAP/40P. See Removing Power from the MAP/40P on page 6.

1. Ensure that the MAP/40P tower configuration is in an upright position on the support base.
2. Remove the six screws located along the bottom of the MAP/40P, one located midway up the left side toward the front, and one in the middle of the rear of the chassis.

**Note:** You will need a No. 2 Phillips screwdriver.

There are three screws on each side of the MAP/40P.

3. Remove the screw holding the dress cover to the rear of the MAP/40P.
4. Remove the front bezel by pulling it forward.
5. At the rear of the MAP/40P, pry both sides of the dress cover away from the unit.
6. Slide the dress cover up to remove it from the MAP/40P.
Replacing the Dress Cover

1. Place the MAP/40P in the upright position.
2. Slide the dress cover over the unit.
3. Replace and tighten the eight dress cover retaining screws.

Restoring Power to the MAP/40P

The MAP/40P requires a dedicated power line. The power cord connects to the rear of the MAP/40P at the point labeled Input Receptacle (Figure 10 on page 7).

Follow the procedure below to restore power to the MAP/40P.

1. Place the MAP/40P power cord in the AC input receptacle on the rear of the unit (Figure 10 on page 7).
2. Plug the MAP/40P power cord into the designated power outlet.
3. Turn on the power switch on the front of the MAP/40P.
   - The green lamp, labeled POWER ON, on the front of the unit should be lit.
4. Turn on the monitor’s power switch.
   - The green or amber lamp on the front bottom of the monitor should be lit.
2 Installing or Replacing Circuit Cards

Overview

The purpose of this chapter is to ensure that:
• Circuit cards are installed correctly
• Resource options are set correctly

Topics covered include:
• Configuring circuit cards in the MAP/40P
• Types of circuit cards
• General steps for circuit card installation
• Specific procedures for installation of standard and optional MAP/40P circuit cards
• Settings for resource options
2 Installing or Replacing Circuit Cards

General Procedures

The general procedures include:

• Removing a Circuit Card on page 12
• Installing a Circuit Card on page 14

Removing a Circuit Card

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2, in Chapter 1, Getting Inside the Computer, for detailed electrostatic discharge precautions.

To remove a circuit card, do the following.

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

Note: If the circuit card being replaced is defective, note all symptoms of failure and include this information with the circuit card when it is returned.
2 Installing or Replacing Circuit Cards

General Procedures

2 If the system is in service, do the following:

a Stop the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the *Intuity CONVERSANT System Reference*, 585-313-205.

3 Remove power from the MAP/40P. See *Removing Power from the MAP/40P on page 6* in *Chapter 1. Getting Inside the Computer*.

4 Remove the dress cover. See *Removing the Dress Cover on page 9* in *Chapter 1. Getting Inside the Computer*.

5 Locate the card to be replaced within the card cage. Disconnect any attached cables. Note the connectivity of each cable.

6 If there are ribbon cables attached to other cards which would impede the removal of the card, disconnect them and place them to the side. Note the connectivity of each cable.

7 Remove the retaining screw from the circuit card faceplate and save it.
Installing or Replacing Circuit Cards

8 Remove the circuit card from the backplane slot by gently pulling at the top corners of the circuit card.

**Note:** The backplane connector slots are labeled 1 through 20. Make sure to install the replacement card in the same backplane slot.

9 Remove the circuit card from the MAP/40P chassis.

⚠️ **CAUTION:**
Hold the circuit card carefully by the edges and place it on a grounded mat. See Protecting Against Damage from Electrostatic Discharge on page 2 in Chapter 1, “Getting Inside the Computer,” for detailed electrostatic discharge precautions.

Installing a Circuit Card

⚠️ **CAUTION:**
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2 in Chapter 1, Getting Inside the Computer, for detailed electrostatic discharge precautions.

To install a circuit card, do the following:

1 Remove the new circuit card from its ESD protective wrapping.
2 Installing or Replacing Circuit Cards

General Procedures

Note: Keep the package and all ESD protective wrapping. If you must return a card for repair, re-use of the replacement unit packaging is necessary to meet the manufacturer’s warranty.

2 Verify the circuit card switch and jumper settings. Ensure address switches and jumpers are set to match the old card.

Note: See the specific instructions, listed later in this chapter, for each type of circuit card being installed then continue with step 3.

3 Holding the circuit card by its upper corners, slide the card into the backplane connector slot position from which you removed the damaged card.

4 Apply even pressure to both corners of the circuit card until it is locked into the backplane.

5 Secure the circuit card faceplate into position by replacing the retaining screw.

6 Return all cables on the new card. Make sure these cables are attached to their proper terminations.

7 Return all cables removed from other cards. Make sure these cables are attached to their proper terminations.

8 Replace the side dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.
Settings for Optional Circuit Cards

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2, in Chapter 1, Getting Inside the Computer, for detailed electrostatic discharge precautions.

This section provides the following information on the optional feature circuit cards:

- Switch and jumper settings
- Other installation requirements that are specific to the particular circuit card you are installing
In general, circuit cards are not preset at the factory. You must set the switches and jumpers (resource options) BEFORE you install the cards. When you set the switches according to the instructions in this book, remember that OFF is equivalent to open and ON is equivalent to closed.

**Tip/Ring Circuit Cards**

The Tip/Ring circuit cards provide the channels which are used by the Intuity CONVERSANT system. The MAP/40P accommodates eleven Tip/Ring circuit cards. The Tip/Ring circuit card can be any of the following types:

- AYC29 (IVP6-IA)
- AYC10 (IVC6)
- AYC30 (NGTR)

The following section covers the resource option settings for each type of T/R card. Many of the figures referenced illustrate settings for more than one type of T/R card.

The six switches on Switch Bank A adjust the termination impedance that each Tip/Ring interface presents to the network. This adjustment is sometimes necessary to ensure an adequate impedance match between the network and the telephone hybrid on the Tip/Ring card.

Switches one (1) through six (6) on Switch Bank A correspond to channels 0-5, respectively, on each Tip/Ring card.
In general, you should leave all switches on Switch Bank A in the factory default “OPEN” position. If the system shows problems such as not recognizing touch tones, touch-tone simulation by outgoing speech (speech abruptly stops during playback), or unreliable detection of touch tones during playback (playback does not stop when a touch tone is entered), moving the switch that corresponds to the channel exhibiting the conditions to the “CLOSED” position may solve the problem.

Each Tip/Ring card in the system must have a unique address. To set these addresses, set Switch Bank B as shown in Figure 11 on page 19, where “T/R 0” denotes the first Tip/Ring circuit card you are installing, “T/R 1” denotes the second card, and so on.
Figure 11. Settings for Switches on the IVP6-IA (AYC29), and IVC6 (AYC10)

Installing or Replacing Circuit Cards

**Installing the Tip/Ring Circuit Card Driver**

**Note:** If the Tip/Ring circuit cards are not recognized when the voice system is started or if other problems are noticed with the Tip/Ring circuit card driver, it may be necessary to remove and reinstall the Tip/Ring circuit card driver.

Occasionally dynamically loadable drivers fail to load into the UnixWare kernel properly.

To install the Tip/Ring circuit card driver, do the following:

2. Run the Hardware Resource Allocator to determine the configuration and placement of the Tip/Ring circuit cards to be installed. See *Adding Hardware to an Existing Configuration on page 468* in *Appendix A., System Configuration*.

3. If you are not already logged in as root, do so now.

4. Enter `pkgadd -d diskette1`

   The system displays the following message:

   ```
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)
   ```
5 Insert the diskette labeled “Tip/Ring Board Driver 1 of 1” into the diskette drive.

6 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. tipring INTUITY Tip/Ring Board Driver (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

7 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Tip/Ring Board Driver (tipring) from <diskette1>
INTUITY Tip/Ring Board Driver (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
2 Installing or Replacing Circuit Cards

The system displays several status messages and then the following message:

Please enter the IRQ:

8 Enter the IRQ provided by the Hardware Resource Allocator.

The system displays several status messages and then the following message:

Installation of INTUITY Tip/Ring Board Driver (tipring) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

9 Enter q

10 Remove the diskette labeled “Tip/Ring Board Driver 1 of 1” from the diskette drive.

E1/T1 Circuit Card

Note: The E1/T1 circuit card (Figure 16 on page 30) contains switches and jumpers that you must set before you install the circuit card in the MAP/40P.
Figure 16. E1/T1 (AYC21) Circuit Card

Installing the E1/T1 Circuit Card Driver

Note: If the E1/T1 circuit cards are not recognized when the voice system is started or if other problems are noticed with the E1/T1 circuit card driver, it may be necessary to remove and reinstall the E1/T1 circuit card driver.

Occasionally dynamically loadable drivers fail to load into the UnixWare kernel properly.

To install the E1/T1 circuit card driver, do the following:

1. If you are not already logged in as root, do so now.
3. Enter `pkgadd -d diskette1`
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)
4. Insert the diskette labeled “T1/E1 Board Driver 1 of 3” into the diskette drive.
5. Press ENTER.
The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:
1. t1driver INTUITY T1/E1 Board Driver (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

6 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY T1/E1 Board Driver (t1driver) from <diskette1>

INTUITY T1/E1 Board Driver (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY T1/E1 Board Driver (t1driver)
diskette 2 of 3
2 Installing or Replacing Circuit Cards

Settings for Optional Circuit Cards

Insert diskette 2 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

7 Remove the diskette labeled “T1/E1 Board Driver 1 of 3” from the diskette drive.

8 Insert the diskette labeled “T1/E1 Board Driver 2 of 3” into the diskette drive.

9 Press ENTER.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY T1/E1 Board Driver (tldriver)
diskette 3 of 3

Insert diskette 3 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

10 Remove the diskette labeled “T1/E1 Board Driver 2 of 3” from the diskette drive.

11 Insert the diskette labeled “T1/E1 Board Driver 3 of 3” into the diskette drive.

12 Press ENTER.
The system displays several status messages and then the following message:

Installation of T1/E1 Board Driver (t1driver) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

13 Enter q
14 Remove the diskette labeled “T1/E1 Board Driver 3 of 3” from the diskette drive.

Speech and Signal Processor (AYC43) Circuit Card

Note: The SSP circuit card (Figure 21 on page 38) contains switches that you must set before you install the circuit card in the MAP/40P.
Jumper Settings  

Figure 21 on page 38 shows a location for jumpers. However, there should be no jumpers installed on the SSP circuit card.
## Switch Settings

There are two types of switches on the SSP circuit card:

- Two-position switches
- Rotary switch

### Two-Position Switch Settings

**Figure 22 on page 39** shows the location of the SSP circuit card two-position switches. If the SSP circuit card is not located at the end of the TDM bus, both switches should be set to open. The switches should be set to closed if the SSP circuit card is located at the end of the bus.

**Figure 22.** SSP Circuit Card Two-Position Switches (Set for a Placement in the Middle of the TDM Bus)

### Rotary Switch Settings

**Figure 23 on page 40** shows the rotary switch. It is set at zero for the first SSP circuit card installed in the MAP/40P.
Table 1 on page 40 shows the rotary switch settings for the subsequent SSP circuit cards installed.

Table 1. SSP Circuit Card Rotary Switch Setting

Installing the ASP Driver Package
To install the ASP circuit card driver, do the following:

1  Stop the voice system. See “Administer the Voice System,” in “Common System Procedures,” in Intuity CONVERSANT System Reference, 585-313-205.

2  At the UNIX prompt, enter pkgadd -d diskette1
The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

3 Insert the diskette labeled “ASP Driver Package 1 of 2” into the diskette drive.

4 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.
The following packages are available:
1. asp INTUITY ASP Driver Package
   (i486) cs3.1

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY ASP Driver Package (asp) from <diskette1>
INTUITY ASP Driver Package
(i486) cs3.1
Using </> as the package base directory.
2 Installing or Replacing Circuit Cards

Note: If you did not stop the voice system, the system displays the following message at this point:

The voice system is currently running and must be stopped in order to install this package.
Is it ok to STOP the voice system? [y/n]

Enter y

The system displays the following message:

READY TO PROCESS:
Package: INTUITY ASP Driver Package (asp)
diskette 2 of 2

Insert diskette 2 of 2 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Remove the diskette labeled “ASP Driver Package 1 of 2” from the diskette drive.

7 Insert the diskette labeled “ASP Driver Package 2 of 2” into the diskette drive.

8 Press ENTER.
The system displays several status messages and then the following message:

The UNIX Operating System kernel will be rebuilt to include your configuration changes during the next system reboot.

Installation of INTUITY ASP Driver Package (asp) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

9 Enter q
10 Make sure the light on the diskette drive is off, and remove the diskette from the drive.

Reboot the system. See “Reboot the System,” in “Common System Procedures,” in Intuity CONVERSANT System Reference, 585-313-205.

PCI Ethernet LAN Circuit Cards

The system supports two versions of the PCI Ethernet LAN circuit card

~ SMC8432
~ SMC9332
## Installing or Replacing Circuit Cards

### Settings for Optional Circuit Cards

**SMC8432 Circuit Card**

The SMC8432 Ethernet LAN circuit card is a 10-Mbps circuit card. Figure 24 on page 45 shows the SMC8432 Ethernet LAN circuit card.

**Note:** There are no jumpers on the circuit card.

**Figure 24. SMC8432 Ethernet LAN Circuit Card**
SMC9332 Circuit Card

The SMC9332 Ethernet LAN circuit card is a 10/100-Mbps circuit card. Figure 25 on page 46 shows the SMC9332 Ethernet LAN circuit card.

**Note:** There are no jumpers on the circuit card.

**Figure 25. SMC9332 Ethernet LAN Circuit Card**
2 Installing or Replacing Circuit Cards

Settings for Optional Circuit Cards

Installing a PCI LAN Circuit Card

Installation of a 10 Mbps or a 10/100 Mbps PCI LAN circuit card, in a system which did not previously have a LAN circuit card, involves

- Installing the PCI LAN Circuit Card on page 47
- CMOS Parameter Settings on page 92
- Installing the PCI Circuit Card Driver on page 49
- Verifying the PCI LAN Circuit Card Installation on page 52

Installing the PCI LAN Circuit Card

To install either a 10 Mbps or a 10/100 Mbps PCI LAN circuit card, do the following:

1 Shut down the system if it is running; otherwise continue with step 2. See “Shut Down the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

2 Install the 10 Mbps or 10/100 Mbps PCI LAN circuit card. See Installing a Circuit Card on page 14.

3 Administer the PCI INT/IRQ Binding. See CMOS Parameter Settings on page 92.
Installing a 100 Mbps PCI LAN Circuit Card

**Note:** Perform the following procedure if the SMC9332 circuit card is required to operate at 100 Mbps. If the SMC9332 circuit card is to operate at 10 Mbps, continue with [Installing the PCI Circuit Card Driver on page 49](#) because no changes are required for 10 Mbps operation.

To ensure the SMC9332 circuit card operates at 100 Mbps, do the following:

1. Login as root.
2. Enter `vi /etc/inst/nics/drivers/smpw0`
3. Change the line `SMPMEDIA0 SMC_MEDIA_AMD` to `SMPMEDIA0 SMC_MEDIA_STP100_UTP100`

**Note:** SMPMEDIA0 is used for the first PCI LAN circuit card. If your system is using more than one PCI LAN circuit card, change SMPMEDIA1 (for card 2), SMPMEDIA2 (for card 3), or SMPMEDIA3 (for card 4) as required, to read the same as that entered for SMPMEDIA0.

4. Write and exit the file.
Installing the PCI Circuit Card Driver

To install the PCI LAN circuit card driver, do the following:

1. From the network administrator, determine the following:
   - The machine IP address
   - The machine node name
   - The system name

2. If you are not already logged in as root, do so now.

3. Enter `niccfg`

   The system displays the following message:

   Setting up the Network Interface Card Support Utility

   The system then displays the Network Interface Card Support Utility—Summary Screen (Figure 26 on page 50).
2 Installing or Replacing Circuit Cards

Settings for Optional Circuit Cards

Figure 26. Network Interface Card Support Utility—Summary Screen

Please Select an Option

(*) Accept all Entries
( ) Add an entry for a card
( ) Delete/restore an Entry for a Card
( ) Install Driver from IHV Diskette
( ) Cancel this Utility Without Making Changes

Use the up/down arrow keys to select then press ENTER

4 Use the down ▼ arrow to select: **Accept all Entries**

**Note:** If installing from a diskette, select: **Install Driver from IHV Diskette**

5 Press ENTER

The system displays the following message:

Installing drivers for Network Card you selected. This will take a few minutes.
2 Installing or Replacing Circuit Cards

Settings for Optional Circuit Cards

When complete, the system displays the system prompt.

6 Enter `setuname -n name` where `name` is the machine node name.

7 Enter `setuname -s name` where `name` is the system name.

8 Enter `cd /etc/net`

9 Use the vi editor and enter the machine node name to the `hosts` file in each of the following directories:
   - `~ ticlts`
   - `~ ticots`
   - `~ ticotsord`

   **Note:** The machine node name must be entered two times on the same line, separated by a tab.

10 Enter `cd /etc/confnet.d/inet`

11 Use the vi editor to edit the `interface` file.

12 Change the line `smpw0:0::/dev/smpw0_0:-trailers` to:
   
   `eeE0:0::/dev/eeE_0:netmask 0xffffff00 broadcast a.b.c.255 -trailers`

   where `a.b.c.` are the first three parts of your machine IP address. For example, IP address 135.7.50.201 would be changed to 135.7.50.255.

13 Copy the files you edited in step 9 into the `/etc/inet/` directory.
2 Installing or Replacing Circuit Cards

14 Enter `cd /etc/inet`

15 Use the vi editor to edit the `config` file.

16 Change the line `###4c:/usr/sbin/route::n:add default
default_router 1`
   to:
   `4c:/usr/sbin/route::y:add default a.b.c.254 1`

   where `a.b.c.` are the first three parts of your IP address. For example, IP
   address 135.7.50.201 would be changed to 135.7.50.254.

17 Write and exit the file.

18 Continue with the procedure in Verifying the PCI LAN Circuit Card
   Installation on page 52.

Verifying the PCI LAN Circuit Card Installation

To set the 10 Mbps or 10/100 Mbps PCI LAN circuit card installation, do the
following:

1 Enter `/etc/inet/rc.restart`

2 Check the message log report for TCP/IP or LAN adapter errors. See
   Chapter 7, “Peripheral Administration,” Intuity CONVERSANT System
   Version 7.0 Administration, 585-313-501.
2 Installing or Replacing Circuit Cards

3 Verify that you have network connectivity using the ping command. See Appendix A, “Summary of Commands,” in Intuity CONVERSANT System Version 7.0 Administration, 585-313-501.

Replacing a PCI LAN Circuit Card

To replace a 10Mbps or a 10/100Mbps PCI LAN circuit card, do the following:

1 Run the Hardware Resource Allocator to determine the configuration and slot assignment of the PCI LAN circuit card. See Adding Hardware to an Existing Configuration on page 468 in Appendix A, System Configuration.

2 Record the output.

3 Complete the procedure in Installing the PCI LAN Circuit Card on page 47.

4 Complete the procedure in Verifying the PCI LAN Circuit Card Installation on page 52.

Token Ring Circuit Card

The Intuity CONVERSANT Token Ring circuit card allows you to connect the system to your local area network.
2 Installing or Replacing Circuit Cards

IBM Turbo 16/4

IBM Turbo 16/4 of the Token Ring circuit card (Figure 27 on page 55) is software configured. This is the latest version of the Token Ring circuit card. A diskette, provided with the Token Ring circuit card, is used to set the IRQ, I/O address, ROM address, RAM address, and RAM size.

Note: If you are installing the IBM Turbo 16/4 circuit card, the system cannot be equipped with the IBM Auto 16/4 circuit card.
2 Installing or Replacing Circuit Cards

Figure 27. Token Ring Circuit Card - IBM Turbo 16/4
To configure the IBM Turbo 16/4 Token Ring circuit card, do the following:

1. If the Token Ring circuit card is being added to the system, run the Intuity CONVERSANT Hardware Resource Allocator to determine the resource assignments. See Operating the Hardware Resource Allocator on page 468 in Appendix A, System Configuration.

   Record the parameters listed in Table 2 on page 56.

### Table 2. Token Ring Circuit Card Settings

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>IRQ</td>
<td></td>
</tr>
<tr>
<td>ROM address</td>
<td></td>
</tr>
<tr>
<td>RAM address</td>
<td></td>
</tr>
<tr>
<td>I/O address</td>
<td></td>
</tr>
</tbody>
</table>

If the Token Ring circuit card is replacing an existing Token Ring circuit card, record and use the existing hardware resource parameters. You can view the existing parameters by entering `cat /etc/conf/sdevice.d/ibmtok`

The system displays a message similar to the following message:

```
ibmtok   Y 16 6 1 3 A20 A23 CC000 CDFFF -1
ibmtok   Y 16 0 0 0 0 0 0 D0000 D3FFF -1
```
2 Installing or Replacing Circuit Cards

Settings for Optional Circuit Cards

Record the parameters listed in Table 2 on page 56.

In the example message, the IRQ is 3, the ROM address range is CC000 - CDFFF, the RAM address range is D0000 - D3FFF, and the I/O address range is A20 - A23.

Verify that IRQ being used by the existing Token Ring circuit card, or designated by the Hardware Resource Allocator, is available.

2 Enter resmgr

The system displays a table containing available and assigned IQRs. Scan the IRQ column to verify availability.

3 Install the new Token Ring circuit card. See Installing a Circuit Card on page 14.

Note: Complete all steps in the installation procedure.

4 Connect the Token Ring circuit card to the LAN.

⚠️ CAUTION:
Do not use a 10 Base T (802.3) wire to connect the Token Ring circuit card to the LAN.
安装或更换电路板

注意：您必须先移除设置为Tip/Ring 1（I/O地址=0x200，OSINDEX=1）的Tip/Ring电路板，然后才能完成此步骤（参见第12页上的“移除电路板”）。如果您没有设置为Tip/Ring 1的Tip/Ring电路板，请继续进行第5步。

5 在软盘驱动器中插入标有“Turbo Token Ring Setup Floppy”的软盘。

6 重新启动系统。请参阅“重新启动系统”一节，在“常用系统操作”一章中的Intuity CONVERSANT System Reference，585-313-205。

   系统显示以下信息：

   Starting PC DOS...

   PC DOS 7.0 Startup Menu

   1. IBM Auto/Turbo ISA Configuration using LANAID
   2. IBM Auto/Turbo ISA Extended Diagnostics

   输入选择：1 余下时间：15

   注意：系统将自动默认为1，时间剩余为0。

7 按下ENTER键。
The system displays the following message:

If you have a Tip/Ring card equipped (IVP4, IVP6, IVC6, NGTR) that is set as Tip/Ring 1 (I/O address=0x200, OSINDEX=1) you MUST TEMPORARILY REMOVE that Tip/Ring card while running LANAIDC. If equipped, power down the system NOW and remove Tip/Ring card 1. Otherwise, continue with LANAIDC.

Hit any key to continue with LANAIDC...

8 Press ENTER.

The system displays the following message:

Please wait while LANAIDC configures your card. To complete setup, you must assign the INTERRUPT number, RAM address and ROM address. Don’t forget to reinstall Tip/Ring 1 when complete.

Enter LANAIDC parameters – reboot your machine when done.

Examples: /view
          /help

LANAIDC >

⚠️ CAUTION:

If n is shown to be 2, enter 9 instead. Do not enter 2.
Enter the following:

```
/INT=n /ROM=ROM_start_address /RAM=RAM_start_address
```

where \( n \) is the IRQ recorded in Table 2 on page 56, and

\( ROM\_start\_address \) and \( RAM\_start\_address \) are addresses recorded in

Table 2 on page 56.

The system displays the following message:

```
Configuration complete:

11 If the configuration is correct, remove the diskette labeled "Turbo Token Ring Setup Floppy" from the diskette drive.

12 Insert the Tip/Ring 1 circuit card if it was removed prior to step 5 (See Installing a Circuit Card on page 14.) Otherwise, continue with step 13.

13 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.
Installing the Token Ring Driver

To configure the Token Ring driver, do the following:

1. If you are not already logged in as root, do so now.

2. Enter `niccfg`

   The system displays the following message:
   
   Setting up the Network Interface Card Support Utility

   The system then displays the Network Interface Card Support Utility—Summary Screen (Figure 26 on page 50).

   **Note:** If other network cards are installed in your system, the system first displays a message indicating network drives are currently installed. Press enter to continue.
3 Use the down (▼) arrow to select **Add an entry for a card**.

4 Press **ENTER**.

The system displays the Selection Screen (Figure 29 on page 65).
2 Installing or Replacing Circuit Cards

Settings for Optional Circuit Cards

(Page Down for more)

5 Use the left ⬅, right ➤, up ⬆, or down ⬇ arrows on your keyboard to move through the field selections.

6 Select IBM_16/4_DLPI_TOKEN_RING

7 Press ENTER
The system displays the Configuration Screen (Figure 30 on page 66).

**Figure 30. Configuration Screen**

![Configuration Screen](image)

<table>
<thead>
<tr>
<th>Configuring: IBM_16/4_DLPI_TOKEN_RING</th>
</tr>
</thead>
<tbody>
<tr>
<td>IRQ Value</td>
</tr>
<tr>
<td>I/O Address</td>
</tr>
<tr>
<td>RAM Address</td>
</tr>
</tbody>
</table>

Press F2 (Choices) to select values then press F10 to apply and exit.

⚠ **CAUTION:**

If the IRQ is shown to be 2, enter 9 instead. Do not enter 2.

8 Use **F2** (Choices) to select the values for each field. Enter the following:

- IRQ value from Table 3 on page 62.
- I/O address from Table 3 on page 62.
- RAM address from Table 3 on page 62.

9 Press **F10** to apply the values and exit.

The system displays the Network Interface Support Card Utility-Summary Screen (Figure 31 on page 67).
## 2 Installing or Replacing Circuit Cards

Please Select an Option

- (*) Accept all Entries
- ( ) Add an entry for a card
- ( ) Delete/restore an Entry for a Card
- ( ) Install Driver from IHV Diskette
- ( ) Cancel this Utility Without Making Changes

Use the up/down arrow keys to select then press ENTER

#### 10 Use the down ▼ arrow to select: **Accept All Entries**

The system displays the following message:

Are you sure?

Yes

No
11 Select **yes** and press **ENTER**

   The system displays the following message:

   Installing drivers for the Network Card(s) you selected.
   This will take a few minutes.

   The system displays the system prompt.

**Asynchronous SuperSerial Card**

The asynchronous circuit card allows you to connect the Intuity CONVERSANT System to external peripheral equipment. One end of the octopus cable, shipped with the circuit card, connects to the circuit card faceplate. The other end splits into eight separate cables, allowing for eight connections to your system.

**Figure 32 on page 69** shows the asynchronous SuperSerial circuit card.

**Note:** If you are installing the asynchronous SuperSerial circuit card, the system cannot be equipped with the 8-Port Asynchronous Megaport circuit card.
Figure 32. Asynchronous SuperSerial Circuit Card
To install the Asynchronous SuperSerial card driver, do the following:

1. If you are not already logged in as root, do so now.

2. Enter `pkgadd -d diskette1`
   
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

3. Insert the diskette labeled “Equinox SST Loadable STREAMS Device Driver (EISA/ISA/MCA/PCI) 1 of 1” into the diskette drive.

4. Press ENTER.
   
   The system displays the following message:
   
   Installation in progress -- do not remove the diskette.

   The following packages are available:
   
   1. eqn   Equinox SST Loadable STREAMS Device Driver (EISA/ISA/MCA/PCI) (i386)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,?,q]:

5. Press ENTER.
The system displays the following message:

PROCESSING:
Package: Equinox SST Loadable STREAMS Device Driver
(EISA/ISA/MCA/PCI) (eqn) from <diskette1>
Equinox SST Loadable STREAMS Device Driver
(EISA/ISA/MCA/PCI) (i386)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

This seems to be an ISA system. Is this correct [Y/n]?

6 Enter y

The system displays the following message:

Installing for ISA bus system.

The following i/o ports appear to be free for use by Equinox ISA boards:
220 240 260 280 2a0 2c0 2e0 320 360 3a0 3c0

Should the driver autoconfigure all Equinox ISA boards [Y/n]?

7 Enter n
The system displays the following message:

One 16k block of memory addresses will be used by all Equinox ISA boards. This address must meet the following criteria:

1. In the range of 640 kilobyte to 1 Megabyte or above 2 Gigabytes
2. No other physical memory (RAM/ROM) present
3. Must NOT be cached
4. Must begin on a 16K boundary

An example hexadecimal address is 0xb0000

Enter your address selection in hexadecimal: 0x

Enter the appropriate address as determined by the Hardware Resource Allocator.

The memory block boundary is determined by the Intuity CONVERSANT Hardware Resource Allocator. See Operating the Hardware Resource Allocator on page 468 in Appendix A, System Configuration.

The system displays the following message:

You may enable a selection of baud rates above 38400 for all ports by answering "Yes" to the following question.

If you enable baud rates above 38400, speeds below 300 baud will be unavailable. Speeds 300 to 38400 are unaffected.
The high baud rates are selected according to the following table:

<table>
<thead>
<tr>
<th>Rate</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>57600</td>
<td>B50</td>
</tr>
<tr>
<td>76800</td>
<td>B75</td>
</tr>
<tr>
<td>115200</td>
<td>B110</td>
</tr>
<tr>
<td>238400</td>
<td>B134</td>
</tr>
</tbody>
</table>

Enable high baud rate selection [y/N]?

Enter n

The system displays the following message:

The unix kernel will be rebuilt to include your configuration changes during the next system reboot.

A system rebuild has been requested when the system is shutdown. System tunables have been modified.

Please request a reboot using the "init 6" command to use the driver.

If you desire the default set of port monitors and port services to be installed, execute "/etc/equportsetup" after the system has rebooted.

Installation of Equinox SST Loadable STREAMS Device Driver (EISA/ISA/MCA/PCI) (equ) was successful.
Installing or Replacing Circuit Cards

Settings for Optional Circuit Cards

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

10 Enter q

11 Remove the diskette labeled “Equinox SST Loadable STREAMS Device Driver (EISA/ISA/MCA/PCI) 1 of 1” from the diskette drive.

12 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

FIFO/SIB Synchronous Host Circuit Card

The MAP/40P supports up to two Lucent FIFO/SIB synchronous host circuit cards.

Figure 33 on page 75 shows the FIFO/SIB synchronous host card and the location of the switches and interrupt jumpers.
Figure 33. FIFO/SIB Synchronous Host Circuit Card

- SW1 (see Synchronous Host switch setting figure)
- J2 (see Synchronous Host jumper setting figure)
- J3 (see Synchronous Host jumper setting figure)
2 Installing or Replacing Circuit Cards

Jumper Settings

There are two jumper locations on the synchronous host circuit card, J3 and J2.

Use J3 to set the interrupt request line (IRQ) to a value of 3, 5, 9, 10, 11, 12, or 13 (Figure 34 on page 77). The IRQ corresponds to the number below the pins. Figure 34 on page 77 shows the card set with an IRQ of 3. See Operating the Hardware Resource Allocator on page 468 in Appendix A, System Configuration.

Note: If you are using IRQ 9, ensure that IRQ 2 is unused on your system.

J2 is preset at the factory. However, before you install the FIFO/SIB synchronous host circuit card, ensure that this jumper is set as shown in Figure 34 on page 77.

Note: When operating at 64 kbaud, this setting supports a maximum cable length of 15 ft.
Figure 34. Jumper Settings for the FIFO/SIB Synchronous Host Circuit Card

Switch Settings  
Figure 33 on page 75 shows the location of the I/O switch block SW1. Figure 35 on page 78 shows the I/O switch settings for an address of 380.
Figure 35. Switch Settings for the FIFO/SIB Synchronous Host Circuit Card

Base I/O address = 380 Hex

All switches closed or OFF

NOTE: Switch 4 is not used.

Table 4 on page 78 shows the switch settings for other potential I/O addresses.

2 of 2
This section provides the following information on the standard circuit cards that are included with every MAP/40P:

- Switch and jumper settings
- Other installation requirements that are specific to the particular circuit card you are installing

**P5 200 MHz CPU Circuit Card**

The P5 200 MHz CPU is packaged on a single PC/AT-compatible circuit card (Figure 36 on page 81) that plugs into the backplane. There is one P5 200 MHz CPU circuit card installed in the MAP/40P.
2 Installing or Replacing Circuit Cards

Standard Circuit Cards

Figure 36. P5 200 MHz CPU Circuit Card

1. SCSI cable connector
2. Diskette cable connector
3. COM2 cable connector
4. Mouse cable connector (not used)
5. Keyboard cable connector
Setting the Resource Options

The resource options for the P5 200 MHz CPU circuit card are set by jumpers and switches.

Jumper Settings

The P5 200 MHz CPU card has jumpers that you must verify before you install the circuit card (Figure 37 on page 83).

Switch Settings

The P5 200 MHz CPU card has switches that you must set before you install the circuit card (Figure 37 on page 83).
To place the P5 200 MHz CPU circuit card in the MAP/40P, do the following:

1. Remove the incoming power. See Removing Power from the MAP/40P on page 6, in Chapter 1, Getting Inside the Computer.
2 Installing or Replacing Circuit Cards

Standard Circuit Cards

2 Remove the dress cover. See Removing the Dress Cover on page 9, in Chapter 1, Getting Inside the Computer.

3 Remove the video controller card. See Removing a Circuit Card on page 12.

4 Attach the SCSI cable adapter to the P5 200 MHz CPU circuit card (Figure 38 on page 85).
2 Installing or Replacing Circuit Cards

Standard Circuit Cards

Figure 38. Attaching the SCSI Cable Adapter

1. SCSI cable adapter
2. SCSI cable connector
5 Complete step 1 and step 2 of the procedure in Installing a Circuit Card on page 14.

6 Attach the keyboard cable to the keyboard pins on the P5 200 MHz CPU circuit card. See Inserting the Remote Maintenance Circuit Card on page 112.

7 Complete step 3 of the procedure in Installing a Circuit Card on page 14.

8 Attach the disk activity cable to the P5 200 MHz CPU circuit card with the red lead toward the back of the MAP/40P.

9 Install the rear COM2 cable to the P5 200 MHz CPU circuit card. See Inserting the Remote Maintenance Circuit Card on page 112.

10 Attach the SCSI cable to the SCSI controller pins on the P5 200 MHz CPU circuit card. See Installing a SCSI Cable on page 196 in Chapter 4, Replacing Other Components.

Note: The SCSI cable has a label that displays the following message:

H600-449 Group 1
MAP/40P SCSI CA
(SCSI/( ) -P5/200)

Note: The SCSI cable will be routed over top of the disk activity cable.

11 Attach the diskette drive cable to the diskette drive cable pins on the P5 200 MHz CPU circuit card. See Installing a Diskette Cable on page 188.
2 Installing or Replacing Circuit Cards

Standard Circuit Cards

Note: The diskette drive cable has a label that displays the following message:

H600-449 Group 1
MAP/40P Floppy CA
(Floppy/( ) -P5/200)

Note: Replace the video controller circuit card. See Installing a Circuit Card on page 14.

12 Complete step 4 through step 10 in Installing a Circuit Card on page 14.

Verifying the Parameter Settings

P5 200 MHz CPU circuit card parameter settings are preloaded into each card. To verify these settings, do the following.

Host Adapter Parameter Settings

⚠️ CAUTION:
Do not change the settings if there is a mismatch. Contact your remote maintenance center for assistance.

1 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

2 After the power on self test (POST) but before the system boots, press CONTROL + A when prompted.
The system displays the Host Adapter Configuration screen (Figure 39 on page 88).

Figure 39. Host Adapter Configuration Screen

Would you like to configure the Host Adapter, or run the SCSI disk utilities? Select the option and press <Enter>. Press <F5> to switch between color and monochrome modes.

Options
Configure/View Host Adapter Settings
SCSI Disk Utilities

3 Place the cursor on Configure/View Host Adapter Settings. Use the up ▲ and down ▼ arrows to move the cursor.

4 Press ENTER.

5 Compare the settings shown on the screen with the parameters listed in Table 5 on page 89.
2 Installing or Replacing Circuit Cards

17 Press ESC.

The system displays the SCSI bus interface definitions screen.

18 Press ESC.

The system displays the following message:

Exit Utilities
Yes
No
2 Installing or Replacing Circuit Cards

CMOS Parameter Settings

19 Place the cursor on Yes. Use the up ▲ and down ▼ arrows to move the cursor.

20 Press ENTER.
   The system displays the following message:
   Please press any key to reboot.

21 Press ENTER.
   The system reboots and responds with the UNIX prompt (#).

CMOS Parameter Settings

⚠️ CAUTION:
Do not change the settings if there is a mismatch. Contact your local technical support representative for assistance.

1 Perform a hard reboot of the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

2 During the POST, press S.
   The system displays the following message:
   Please standby for SETUP Utility...
After the system has installed the BIOS it displays the CMOS basic options set-up menu.

3 Compare the P5 200 MHz CPU circuit card settings in the setup menu with the default parameters listed in Table 9 on page 94.

Note: The settings shown are for BIOS Version 4.05a.2.2 only.

Note: The settings in Table 9 on page 94 that are indicated by a star (*) may differ from the default parameters due to other equipped feature circuit cards in your system. All other settings should be the same as those listed.

Note: ISA option ROMs such as those on the remote maintenance circuit card reside at addresses D000, D400, D800, and DC00 under Shadow RAM. When equipped, these devices should not be shadowed.

</table>
Place the cursor on Basic Options.

Press ENTER.

The system displays the CMOS basic options set-up menu.

If you have changed any option from what is indicated in Table 9 on page 94, Table 10 on page 98, and Table 11 on page 101, press ESC.

This will reboot the system using the values you entered without creating a Flash it backup. If you have entered any incorrect values you can still go back to the original CMOS settings.

If you are certain the CMOS settings are correct and that the system will operate properly, place the cursor on Flash It! and press ENTER.

The system displays the following message.

Ready to Flash, Press the ESC key to Exit or ENTER to flash.
Note: CMOS options can not be flashed if you made any changes. If any changes were made, you must exit, reboot, then re-enter setup to flash.

b  Press ENTER.

The system displays the following message.

Erasing CPU BIOS
Flash It Reset in progress.

After approximately three minutes, the system reboots and displays
Console Login:

**Video Controller Circuit Cards**

Note: The AT&T CRT345 monitor is not compatible with the PCI video circuit card.

*Figure 40 on page 105* and *Figure 41 on page 106* show the PCI video controller circuit cards.

Note: There are no jumpers to set on the PCI video circuit cards.

2 Installing or Replacing Circuit Cards

Remote Maintenance Circuit Card

Types of Remote Maintenance Circuit Cards

The Lucent Intuity system supports the AYC54 remote maintenance circuit card.

- With an internal modem (AYC54)
- Without an internal modem (AYC55)

You can determine the type of remote maintenance circuit card installed on your system by viewing the faceplate. *Figure 43 on page 110* shows the faceplate of a remote maintenance circuit card with an internal modem (AYC54).

**Note:** The AYC54 and AYC55 remote maintenance circuit cards can be connected to an external modem.
Figure 43. AYC54 Remote Maintenance Circuit Card Faceplate

- RJ-11 tip-ring connector (line in)
- User-definable output
- UART DB9S connector
- RMB reset switch
- User-definable input (external UPS)
- RMB AYC54 label
- Lock-down screws
Figure 44 on page 111 shows the faceplate of a remote maintenance circuit card without an internal modem (AYC55).

Figure 44. AYC55 Remote Maintenance Circuit Card Faceplate
2 Installing or Replacing Circuit Cards

Setting the Resource Options

The remote maintenance circuit card is equipped with a BEC enable switch (Figure 42 on page 108). Ensure that this switch is set to the ON position (Figure 45 on page 112).

Figure 45. BEC Enable Switch

swr2bec LJK 063097

Inserting the Remote Maintenance Circuit Card

To insert the remote maintenance circuit card, do the following:

1 Complete the steps in Installing a Circuit Card on page 14.
2 Connect the remote maintenance circuit card interface cable to the P5 200 MHz CPU circuit card keyboard connection (Figure 36 on page 81).

Note: The P5 200 MHz CPU circuit card must be pulled partially out of the MAP/40P before the cable can be connected to the keyboard port.
3 Connect the remote maintenance circuit card interface cable to the P5 200 MHz CPU circuit card COM2 port connection (Figure 36 on page 81).
4 Connect the remote maintenance circuit card interface cable to the remote maintenance circuit card platform reset connection (Figure 42 on page 108).
2 Installing or Replacing Circuit Cards

Remote Maintenance Circuit Card

5 Connect the remote maintenance circuit card interface cable to the remote maintenance circuit card fan status connection (Figure 42 on page 108).

Installing the Remote Maintenance Circuit Card Software Package

To install the remote maintenance circuit card software package, do the following:

1 Stop the voice system.

2 Enter `pkgadd -d ctape1`
   The system displays the following message:
   Insert a cartridge into Tape Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)

3 Insert the tape labeled “RMB Software Set” into the tape drive.

4 Press ENTER.
   The system displays the following message:
   Installation in progress. Do not remote the cartridge tape.
   The following sets are available:
   1 RMBset INTUITY RMB V2 Set (1486)
   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]
2 Installing or Replacing Circuit Cards

Remote Maintenance Circuit Card

5 Press ENTER.

The system displays the following message:

Processing:
Set: RMB Software Set R2.0 (RMBset) from <ctape1>.
Intuity RMB Software Set R2.0 (i486)
Using </> as the package base directory.
The RMB BEC ADDR has been defaulted to D1000
As is typical, should the RMB use COM1, rather than COM2
(default:y) [y,n,?]:

6 If the remote maintenance circuit card should use:

~ COM1, press ENTER.
~ COM2, enter n

The system displays the following message:

Please select the country code:
01 - United States
02 - International

Country code [01]:

7 Enter the appropriate code.
The system displays the following message:

Insert a cartridge into Tape Drive 1.
Type [go] when ready
or [q] to quit: (default: go)

8 Enter q
9 Remove the cartridge tape.
Overview

This chapter describes the procedures to identify and recover from Intuity CONVERSANT system hard disk drive failures, to add a hard disk drive, and to clean a hard disk drive.

Topics covered include:

- How to identify a failed hard disk drive
- Hardware procedures for replacing a hard disk drive
- Software procedures for preparing the system for a new hard disk drive
- Software procedures for initializing a hard disk drive
Identifying a Failed Hard Disk Drive

Before a hard disk drive can be replaced you must identify which drive has failed. This section tells how to identify a failed hard disk drive in systems with two hard disk drives (both mirrored and unmirrored).

Note: If your system is configured with only one hard disk drive, see Software and Hardware Procedures for Replacing Hard Disk Drive 1 (Nonmirrored System) on page 135.

Hard Disk Drive Contents of the Hard Disk Drives in a Two-Drive System

To determine which hard disk drive has failed, it is necessary to know what type of information is stored on each drive. Table 12 on page 117 shows the information contained on each hard disk drive in a nonmirrored system.

<table>
<thead>
<tr>
<th>Disk Identity</th>
<th>Contents of Disk</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hard Disk Drive 0, (bay 4) SCSI ID 00</td>
<td>UNIX operating system, all Intuity CONVERSANT software, system data, and speech/voice storage</td>
</tr>
<tr>
<td>Hard Disk Drive 1, (bay 5) SCSI ID 01</td>
<td>Speech/voice storage</td>
</tr>
</tbody>
</table>
3 Replacing the Hard Disk Drive

Identifying a Failed Hard Disk Drive

Note: The contents for Hard Disk Drive 0 are identical in nonmirrored and single-disk systems.

Table 13 on page 118 shows the information contained on each hard disk drive in a mirrored system.

Table 13. Contents of the Hard Disk Drives in a Mirrored System

<table>
<thead>
<tr>
<th>Disk Identity</th>
<th>Contents of Disk</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hard Disk Drive 0, (bay 4) SCSI ID 00</td>
<td>UNIX operating system, all Intuity CONVERSANT software, system data, and speech/voice storage</td>
</tr>
<tr>
<td>Hard Disk Drive 1, (bay 5) SCSI ID 01</td>
<td>The same information as is contained on Disk 0</td>
</tr>
</tbody>
</table>

Identifying a Hard Disk Drive 0 Failure in a Nonmirrored or Single-Disk System

Because Hard Disk Drive 0 contains the only copy of the operating software in a nonmirrored or single disk system, a failure of this drive will result in a complete failure of the system. If this occurs you will not be able to reboot the system. See Software and Hardware Procedures for Replacing Hard Disk Drive 1 (Nonmirrored System) on page 135 for the replacement procedure.
Identifying a Hard Disk Drive 1 Failure in a Nonmirrored System

Hard Disk Drive 1 contains speech and voice storage. If this hard disk drive fails, speech is lost. In the event of a Hard Disk Drive 1 failure the system displays the following message:

WARNING: Disk Driver: HA0 TCX LU0 - Check Condition

Note: The number after TC is the SCSI ID of the failed hard disk drive.

Identifying a Hard Disk Drive Failure in a Mirrored System

In a mirrored system both hard disk drives contain the same information. As a result, if either hard disk drive fails, the other drive will continue to operate the system. There will be no noticeable difference in service. A hard disk drive failure will be identified by the message shown in Identifying a Hard Disk Drive 1 Failure in a Nonmirrored System on page 119.

The number preceded by TC in the message is the SCSI ID of the failed hard disk drive. If this message appears on the screen, contact your remote maintenance center.
Replacing a Hard Disk Drive

The MAP/40P can contain two hard disk drives. The first hard disk drive, SCSI ID 0, is located in Bay 4; the second hard disk drive, if provided, is located in Bay 5 (Figure 46 on page 121).

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2 in Chapter 1, Getting Inside the Computer.
3 Replacing the Hard Disk Drive

Replacing a Hard Disk Drive

Figure 46. Internal View of the MAP/40P

1. Power supply
2. Backplane
3. Peripheral Bay 1 - unused
4. Peripheral Bay 2 - cartridge tape drive
5. Peripheral Bay 3 - diskette drive
6. Circuit card cage fan
7. Peripheral Bay 4 - Hard Disk Drive 0
8. Peripheral Bay 5 - Hard Disk Drive 1
Hard Disk Drive Removal

To remove a hard disk drive, you must complete the following procedures:

- Removing the Lucent Intuity CONVERSANT System from Service on page 122
- Accessing A Hard Disk Drive on page 123
- Extracting Hard Disk Drive on page 123

Removing the Lucent Intuity CONVERSANT System from Service

To remove the Lucent Intuity system from service, do the following:

**Note:** This procedure is not necessary if Hard Disk Drive 0 has failed on a single-disk system.

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.
### 3 Replacing the Hard Disk Drive

<table>
<thead>
<tr>
<th>Replacing a Hard Disk Drive</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 Remove the incoming power. See <a href="#">Removing Power from the MAP/40P on page 6</a> in Chapter 1, Getting Inside the Computer.</td>
</tr>
</tbody>
</table>

### Accessing A Hard Disk Drive

To access a hard disk drive, remove the dress cover. See [Removing the Dress Cover on page 9](#) in Chapter 1, Getting Inside the Computer.

### Extracting Hard Disk Drive

To extract a hard disk drive, do the following:

1. Remove the SCSI and power cables from the back of Hard Disk Drive 0 and 1 (if installed).
2. Loosen the two screws holding the hard disk drive bracket to the MAP/40P chassis.
3. Slide the hard disk drive bracket toward the floppy drive to release it from the keyed retainers then lift it from the MAP/40P.
4. Remove the screws which secure Hard Disk Drive 0 or 1 to the hard disk drive bracket.

**Note:** Hard Disk Drive 0 is nearest the fans.

5. Place the hard disk drive assembly, with the printed circuit board facing up, on an ESD-protected surface.
6. Continue with the procedure in [Hard Disk Drive Installation on page 124](#).
Reversing the Hard Disk Drive
Replacing a Hard Disk Drive

Hard Disk Drive Installation

To install Hard Disk Drive 0, you must complete the following procedures:

- Installing the Hard Disk Drive Jumpers on page 124
- Inserting A Hard Disk Drive on page 125

Installing the Hard Disk Drive Jumpers

The Lucent Intuity system supports Quantum hard disk drive. Figure 47 on page 124 and Figure 48 on page 125 show the jumper settings for the hard disk drives.

Figure 47. Jumper Settings for SCSI ID 0
Inserting A Hard Disk Drive

To insert the hard disk drive, do the following:

1. Remove the new hard disk drive from its ESD-protective wrapping.

   **Note:** Keep the package and all ESD-protective wrapping to return the defective unit. Re-use of the original replacement unit packaging is necessary to meet the manufacturer’s warranty.

2. Align Hard Disk Drive 0 or 1, in the hard disk drive bracket, with the jumpers near the top of the bracket.

3. Secure the hard disk drive in the hard disk drive bracket using the screws removed in Step 4 of Extracting Hard Disk Drive on page 123.

4. Connect the SCSI and power cables to the back of Hard Disk Drive 0 and 1, if installed.

5. Secure the hard disk drive bracket to the chassis using the two screws loosened in Step 2 of Extracting Hard Disk Drive on page 123.
3 Replacing the Hard Disk Drive

Recovering the Hard Disk Drive

6 Return to either the procedure Replacing Hard Disk Drive 0 (Nonmirrored or Single-Disk System) on page 126 or Replacing Hard Disk Drive 0 (Mirrored System) on page 128 to complete the system recovery.

Replacing Hard Disk Drive 0

The following procedure explains how to replace a hard disk drive on an existing Intuity CONVERSANT system.

The following sections list the procedures for replacing Hard Disk Drive 0 in mirrored, nonmirrored, and single-disk systems.

Replacing Hard Disk Drive 0 (Nonmirrored or Single-Disk System)

Because Hard Disk Drive 0 contains the base system software, you must reinstall the entire Intuity CONVERSANT system if this disk fails on a nonmirrored or single-disk system, after the hard disk drive has been replaced.

To replace the hard disk drive, do the following:

1 Remove Hard Disk Drive 0 from the system. See Replacing a Hard Disk Drive on page 120 for the procedure.
2 Set the jumpers on the replacement Hard Disk Drive 0. See Replacing a Hard Disk Drive on page 120 for the procedure.

3 Place the replacement Hard Disk Drive 0 in Bay 4. See Replacing a Hard Disk Drive on page 120 for the procedure.

⚠️ CAUTION:

After installing a 2-Gbyte hard disk drive into a system as Disk 0, DO NOT ATTEMPT TO INSTALL AN OLDER VERSION OF UnixWare. The version of the operating system tape that should be used contains the phrase “Independent Image.” If the operating system tape does not contain this phrase, notify the remote maintenance center immediately.

To reinstall the Intuity CONVERSANT system software, do the following:

1 Restore the system using the CONVERSANT Image Tape created using the \texttt{mkimage} command. See “Restore the System,” in “Common System Procedures,” in the \textit{Intuity CONVERSANT System Reference}, 585-313-205.

Replacing the Hard Disk Drive

Replacing Hard Disk Drive 0 (Mirrored System)

If Hard Disk Drive 0 fails in a mirrored system, the system will still be operational and there will be no noticeable degradation of service. The following procedure explains how to replace Hard Disk Drive 0 on a mirrored system.

⚠️ CAUTION:

This initial synchronization of data on a mirrored system can degrade service, depending on system load. Therefore, perform this procedure only during off-peak hours.

Replacing the Hard Disk Drive

To replace the hard disk drive, do the following:

1. Remove Hard Disk Drive 0 from the system. See Replacing a Hard Disk Drive on page 120 for the procedure.

2. Set the jumpers on the replacement Hard Disk Drive 0. See Replacing a Hard Disk Drive on page 120 for the procedure.

3. Place the replacement Hard Disk Drive 0. See Replacing a Hard Disk Drive on page 120 for the procedure.

Restoring the Intuity CONVERSANT System

To restore the Intuity CONVERSANT system, do the following:

1. Log in as root.

2. Enter `vxdiskadm`
The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

Figure 49. Volume Manager Support Operations Screen

<table>
<thead>
<tr>
<th>Volume Manager Support Operations</th>
<th>Menu: VolumeManager/Disk</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Add or initialize a disk</td>
<td></td>
</tr>
<tr>
<td>2 Encapsulate a disk</td>

<tr>
<td>?? Display help about menuing system</td>
<td></td>
</tr>
<tr>
<td>q Exit from menus</td>
<td></td>
</tr>
</tbody>
</table>

Select an operation to perform:

3 Enter list
The system displays the List Disk Information screen (Figure 50 on page 130).

Figure 50. List Disk Information Screen

List Disk Information
Menu: VolumeManager/Disk/ListDisk

Use this menu option to display a list of disks. You can also choose to list detailed information about the disk at a specific disk device address.

Enter disk device or "all" [<address>, all, q, ?] (default: all)

4 Press ENTER.

The system displays the following message:

<table>
<thead>
<tr>
<th>DEVICE</th>
<th>DISK</th>
<th>GROUP</th>
<th>STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>c0b0t0d0</td>
<td>disk00</td>
<td>rootdg</td>
<td>online</td>
</tr>
<tr>
<td>c0b0t1d0</td>
<td>disk01</td>
<td>rootdg</td>
<td>online</td>
</tr>
</tbody>
</table>
3 Replacing the Hard Disk Drive

5 Record the device IDs and disk names in the following table.

<table>
<thead>
<tr>
<th>Device</th>
<th>Disk</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6 Press **ENTER**.

   The system displays the Volume Manager Support Operations screen *(Figure 49 on page 129)*.

7 Enter 4

   The system displays the following message:

   Enter the name of the disk to remove.

8 Enter the disk name for the drive with the device ID c0b0t0d0.

**Note:** This should be disk00.

   The system displays the Volume Manager Support Operations screen *(Figure 49 on page 129)*.

9 Enter 5
The system displays the following message:

Enter the name of the disk to replace.

10 Enter the same disk name as in step 8.

The system displays the following message:

Enter the device ID of the disk to use as a replacement.

11 Enter c0b0t0d0

The system displays the Hard Disk Partitioning – Disk 0 screen (Figure 51, on page 133).
Enter 1

The system responds with a screen where you must supply information for the new partition.

13 Select UNIX System. Use ◄ and ► to move through the Partition Type field selections.

14 Press TAB to move to the Percentage of Disk field.
Replacing the Hard Disk Drive

Replacing Hard Disk Drive 1

15 Enter 100

16 Press 7 to move to the Apply box and press ENTER.

   The system displays the Hard Disk Partitioning – Disk 0 screen (Figure 51 on page 133).

17 Enter 4

   The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

18 Enter q

   The system starts mirroring the contents of Hard Disk Drive 1 to Hard Disk Drive 0. This will not interrupt normal operation of the Intuity CONVERSANT system.

Replacing Hard Disk Drive 1

The following procedure explains how to replace a hard disk drive on an existing Intuity CONVERSANT system.

This procedure only applies to Hard Disk Drive 1. If it is not possible to log in to the Intuity CONVERSANT system, it is possible that Hard Disk Drive 0 has failed. See one of the procedures in Replacing Hard Disk Drive 0 on page 126 (nonmirrored or mirrored, depending on your configuration) for instructions.
Software and Hardware Procedures for Replacing Hard Disk Drive 1 (Nonmirrored System)

If Hard Disk Drive 1 fails in a nonmirrored system, the system is still operational. However, speech files are lost. The following procedure explains how to replace Hard Disk Drive 1 on a nonmirrored system.

**Replacing the Hard Disk Drive**

To replace Hard Disk Drive 1, do the following:

1. Remove Hard Disk Drive 1 from the system. See Replacing a Hard Disk Drive on page 120 for the procedure.

2. Set the jumpers on the replacement Hard Disk Drive 1. See Replacing a Hard Disk Drive on page 120 for the procedure.

3. Place the replacement Hard Disk Drive 1. See Replacing a Hard Disk Drive on page 120 for the procedure.

**Restoring the Intuity CONVERSANT System**

To restore the Intuity CONVERSANT system, do the following:

1. Log in as root.

2. Enter `vxdiskadm`
   
   The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

3. Enter `list`
3 Replacing the Hard Disk Drive

The system displays the List Disk Information screen (Figure 50 on page 130).

4 Press ENTER.

The system displays the following message:

<table>
<thead>
<tr>
<th>DEVICE</th>
<th>DISK</th>
<th>GROUP</th>
<th>STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>c0b0t0d0</td>
<td>disk00</td>
<td>rootdg</td>
<td>online</td>
</tr>
<tr>
<td>c0b0t1d0</td>
<td>disk01</td>
<td>rootdg</td>
<td>online</td>
</tr>
</tbody>
</table>

5 Record the device IDs and disk names in the following table.

<table>
<thead>
<tr>
<th>Device</th>
<th>Disk</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6 Press ENTER.

The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

7 Enter 3

The system displays the following message:

Enter the name of the disk to remove.
8 Enter the disk name for the drive with the device ID c0b0t1d0.

Note: This should be disk01.

The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

9 Add Hard Disk Drive 1 to the system. See Adding a Hard Disk Drive to a System for Speech Storage on page 149.

10 Restore the speech files using the spres command. See Appendix A, “Summary of Commands” in Intuity CONVERSANT System Version 7.0 Administration, 585-313-501, for more information.

Software and Hardware Procedures for Replacing Hard Disk Drive 1 (Mirrored System)

If Hard Disk Drive 1 fails in a mirrored system, the system is still operational and there is no noticeable degradation of service. The following procedure explains how to replace Hard Disk Drive 1 on a mirrored system.

⚠️ CAUTION:

This initial synchronization of data on a mirrored system can degrade service, depending on system load. Therefore, perform this procedure only during off-peak hours.

Total disk size is 2048 cylinders (2048.0MB)

SELECT ONE OF THE FOLLOWING

0. Overwrite system master boot code
1. Create a partition
2. Change Active (Boot from) partition
3. Delete a partition
4. Update (Update disk configuration and exit)
5. Exit (Exit without updating disk configuration)

Enter selection:

12 Enter 1

The system responds with a screen where you must supply information for the new partition.

13 Select UNIX System. Use ← and → to move through the Partition Type field selections.

14 Press TAB to move to the Percentage of Disk field.
Adding a Hard Disk Drive

This section details the procedures for adding a second hard disk drive to an Intuity CONVERSANT system with only one hard disk drive. If you are replacing an existing drive, see Replacing Hard Disk Drive 0 on page 126 or Replacing Hard Disk Drive 1 on page 134.
Adding a Hard Disk Drive to a System for Mirroring

To add a hard disk drive, do the following:

1. Install the new hard disk drive. See Replacing a Hard Disk Drive on page 120.

2. Clean the new hard disk drive. See Cleaning a Hard Disk Drive on page 153.

3. Log in as root.

4. Enter `fdisk /dev/rdsk/c0b0t`d0s0`

   The system displays the following message:

   The recommended default partitioning for your disk is 100% UNIX system partition.

   To select this, please type "y". To partition your disk differently, type "n" and the "fdisk" program will let you select other partitions.

5. Enter y

6. Enter `vxdiskadm`

   The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

7. Enter 1
The system displays the Add or Initialize a Disk screen (Figure 53 on page 144).

Figure 53. Add or Initialize a Disk Screen

Add or initialize a disk
Menu: VolumeManager/Disk/AddDisk

Use this operation to add a disk to a disk group. You can select an existing disk group or create a new disk group. You can also initialize a disk without adding it to a disk group, which leaves the disk available for use as a replacement disk. This operation takes, as input, a disk device, for example c0b0t2d0, a disk group (or none to leave the disk available for as a replacement disk). If you are adding the disk to a disk group, you will be asked to give a name to the disk.

More than one disk or pattern may be entered at the prompt. Here are some disk selection examples:

all: all disks
c3 c4b0t2: all disks on both controller 3 and controller 4, bus 0, target 2
c3b0t4d2: a single disk

Select disk device to add
[<pattern-list>,all,list,q,?]
3  Replacing the Hard Disk Drive

Note: The list command will show the newly added disk online or error, but not as part of any disk group. Choose this disk address for the next prompt.

The system displays a message similar to the following message:

<table>
<thead>
<tr>
<th>DEVICE</th>
<th>DISK</th>
<th>GROUP</th>
<th>STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>c0b0t0d0</td>
<td>disk00</td>
<td>rootdg</td>
<td>online</td>
</tr>
<tr>
<td>c0b0t1d0</td>
<td>-</td>
<td>-</td>
<td>online</td>
</tr>
</tbody>
</table>

9 Enter the device to add, in the form c0b0tXd0, where X is the number of the drive that you are adding.

The system displays the following message:

Here is the disk selected. Output format: [Device_Name]
c0b0tXd0
Continue operation? [y,n,q,?] (default: y)

10 Enter y

The system displays the following message:

Disk device c0b0tXd0 appears to have been initialized already.
The disk is currently available as a replacement disk.
3 Replacing the Hard Disk Drive

Adding a Hard Disk Drive

**Note:** If the disk is a brand new disk, the above message is not displayed. Sometimes the newly added disk STATUS is shown as error instead of online. This may happen until the disk is added to the Volume Manager internal configuration files using vxdiskadm.

Do you wish to reinitialize c0b0tXd0?

11 Enter y

The system displays the following message:

You can choose to add this disk to an existing disk group, to create a new disk group, or you can choose to leave the disk available for use by future add or replacement operations. To create a new disk group, select a disk group name that does not yet exist. To leave the disk available for future use, specify a disk group name of "none".

Which disk group [<group>,none,list,q,?] (default: rootdg)

12 Press ENTER.

The system displays the following message:

Use a default disk name for the disk? [y,n,q,?] (default: y)

13 Enter n
The system displays the following message:
Add disk as a hot-spare disk for? [y,n,q,?] (default: n)

14 **Enter n**

The system displays the following message:
The selected disks will be added to the disk group rootdg with the disk name that you will specify interactively

c0b0tXd0
Continue the operation? [y,n,q,?] (default: y)

15 **Enter y**

The system displays the following message:
The following disk device appears to have been initialized already. The disk is currently available as a replacement disk.
Output format: [Device_name]
c0b0tXd0
Use this device? [y,n,q,?] (default: y)

**Note:** If the disk is a brand new disk, the above message is not displayed.

16 **Enter y**
Reinitializing the Hard Disk Drive

Adding a Hard Disk Drive

The system displays the following message:

The following disk you selected for use appears to have already been initialized for the Volume Manager. If you are certain the disk has already been initialized for the Volume Manager, then you do not need to reinitialize the disk device.

Output format: [Device_Name]

`c0b0tXd0`

Reinitialize this device? [y,n,q,?] (default: y)

**Note:** If the disk is a brand new disk, the above message is not displayed.

17. **Enter n**

The system displays the following message:

Perform surface analysis (highly recommended). [y,n,q,?] default: y

18. **Enter y**

The system displays the following message:

Enter disk name for `<c0d0tXd0>` [<name>,q,?] (default: disk01)

19. Enter the disk name, or press **ENTER** to select disk01.
The system displays the following message:

```
Adding disk device c0b0tXd0 to disk group rootdg with disk name <diskname>
```

Add or initialize other disks? [y,n,q,?] (default: n)

20 Press **ENTER**.

The system displays the Volume Support Manager Operations screen (**Figure 49 on page 129**).

21 Select **q** to quit

22 Enter **vxdisk list**

The system displays a message similar to the following message:

```
DEVICE       DISK         GROUP        STATUS
----------   ----------    ----------    --------
c0b0t0d0     disk00       rootdg       online
```  

23 Verify that the STATUS column for the disk is online.

---

**Adding a Hard Disk Drive to a System for Speech Storage**

**Note:** If you are using an existing disk, perform the [Cleaning a Hard Disk Drive on page 153](#) procedure first.
3 Replacing the Hard Disk Drive

1 Complete the procedure in Adding a Hard Disk Drive to a System for Mirroring on page 143.

2 Log in to the system as root.

3 Enter /mtce/bin/dispdisk

   The system displays a message similar to the following:
   Choose a disk from the following list
   disk00  disk01
   Enter disk:

4 Enter disk01

   The system displays a message similar to the following:
   Disk Name:  disk01  Status: online
   Device Name:  c0b0t1d0s0  Length:  4187648
   Volumes on disk disk01:
   -------------------------
   home
   home2
   rootvol
   standvol
   swapvol
   usr
5 Record the value shown in the Length field on the line below.
Length: __________________________

6 Enter /mtce/bin/makevol
The system displays the following message:
Enter Volume Name:

7 Enter home3
The system displays the following message:
Enter Volume Length:

8 Enter the number you recorded in Step 5.
The system displays the following message:
Number of mirrors set to: 0
Volume layout set to: nocontig
Logging type set to: NONE
Disk Group set to: rootdg
Choose a disk from the following list:
disk00  disk01
Enter disk:

9 Enter the disk name (for example, disk01).
3 Replacing the Hard Disk Drive

Adding a Hard Disk Drive

The system displays the following message:

Please wait, this will take a couple of minutes.

Mkfs: make vxfs file system?

(DEL if wrong)

When the system prompt returns, an entry is automatically added /etc/vfstab for the home3 volume, and the file system is mounted.

Moving the Speech to the Speech Disk

Note: Direct calls away from the system during this procedure.

To add a speech disk to an existing system, do the following:

1 Log in as root.
2 Enter cd /home2/vfs/talkfiles
3 Enter find . -name -pring | cpio -pdmuv /home3/vfs/talkfiles
4 Enter vi /vs/data/irAPI.rc
5 Change the line SPEECHDIR=/home2/vfs/talkfiles to SPEECHDIR=/home3/vfs/talkfiles
6 Enter stop_vs
Cleaning a Hard Disk Drive

Cleaning a hard disk drive can be done by:
- Using the fdisk command
- Low-level formatting the hard disk drive

Using the fdisk Command

A hard disk drive which contains data cannot be installed in a Intuity CONVERSANT system. The hard disk drive must be cleaned before use.

To clean a hard disk drive, do the following:
1. Log in to the system as root.
2. Enter `fdisk /dev/rdsk/c0b0t1d0s0`
CAUTION:
The phrase c0b0t1d0s0 is the name of the disk to be cleaned. The phrase c0b0t1d0s0 is correct for Hard Disk Drive 1. Hard Disk Drive 0 is named c0b0t0d0s0.

The system displays the Disk Cleaning screen (Figure 54 on page 154).

**Figure 54. Disk Cleaning Screen**

<table>
<thead>
<tr>
<th>Partition</th>
<th>Status</th>
<th>Type</th>
<th>Start</th>
<th>End</th>
<th>Length</th>
<th>%</th>

</table>

SELECT ONE OF THE FOLLOWING

0. Overwrite system master boot code
1. Create a partition
2. Change Active (Boot from) partition
3. Delete a partition
4. Update (Update disk configuration and exit)
5. Exit (Exit without updating disk configuration)

Enter selection:

3  Enter 3
3 Replacing the Hard Disk Drive

Cleaning a Hard Disk Drive

The system displays the following message:

Enter the number of the partition you want to delete
(or enter x to exit)

4 Enter the number of the partition.

For the example given in Figure 54 on page 154, you would enter 1.

The system displays the following message:

Do you want to delete partition X? This will erase all files and programs in this partition (type "y" or "n").

5 Enter y

The system displays the following message:

Partition X has been deleted.

The system displays the Disk Cleaning screen (Figure 54 on page 154).

6 Enter 4

The system displays the following message:

If you have created or altered a partition, you must initialize the partition to reflect the new configuration. For a UNIX System partition run the disksetup(1m) command. For a DOS partition, run the DOS format command. Changes limited to the "Active' status field require no additional action.
Replacing the Hard Disk Drive

7 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

Low-Level Formatting the Hard Disk Drive

The procedure for low-level formatting a hard disk drive differs depending on the CPU type installed on your system.

To low-level format a hard disk drive, do the following:

1 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

2 Press CONTROL + A when prompted.

   The system displays the Host Adapter Configuration screen (Figure 55 on page 157).
3 Place the cursor on **SCSI Disk Utilities**. Use the up ▲ and down ▼ arrows to move the cursor.

4 Press **ENTER**.

The system displays the SCSI Disk Utilities screen ([Figure 56 on page 158](#)).
3 Replacing the Hard Disk Drive

Cleaning a Hard Disk Drive

Figure 56. SCSI Disk Utilities Screen

Place the cursor on the SCSI Disk to be formatted. Use the up ▲ and down ▼ arrows to move the cursor.

6 Press ENTER.

The system displays the Configure/Format Disk screen (Figure 57 on page 158).

Figure 57. Configure/Format Disk Screen

Select SCSI Disk and press <Enter>.

<table>

Configure Disk
Format Disk
3 Replacing the Hard Disk Drive

Mirroring

This section details procedures for establishing or removing mirroring on a two-disk Intuity CONVERSANT system.

Establishing Mirroring

Establishing disk mirroring includes copying data from the first disk to the second disk, then enabling mirroring so that the two disks continue to be in sync. When mirroring to another disk, make sure that the second disk is at least as large as the first one. If the second disk is larger, the additional space remains unused and may be used later if there is a need to grow a file system.

The following procedure shows the system entries and system responses when mirroring disk00 and disk01. If you are mirroring other disks, your responses will be different.

7 Place the cursor on the Format Disk. Use the up ▲ and down ▼ arrows to move the cursor.

8 Press ENTER.
   The system will ask you to confirm that the disk is to be formatted.

9 Enter y
1. Set the jumpers on Hard Disk Drive 1. See Replacing a Hard Disk Drive on page 120 for the procedure.

2. Place Hard Disk Drive 1 in Bay 3. See Replacing a Hard Disk Drive on page 120.

3. Add Hard Disk Drive 1 to the system. See Adding a Hard Disk Drive to a System for Mirroring on page 143.

4. At the UNIX prompt, enter `vxdiskadm`
   The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

5. Enter 6
   The system displays the Mirror Volumes on a Disk screen (Figure 58 on page 161).
Figure 58. Mirror Volumes on a Disk Screen

Mirror volumes on a disk
Menu: VolumeManager/Disk/Mirror

This operation can be used to mirror volumes on a disk. These volumes can be mirrored onto another disk or onto any available disk space. Volumes will not be mirrored if they are already mirrored. Also, volumes that are comprised of more than one subdisk will not be mirrored. Mirroring volumes from the boot disk will produce a disk that can be used as an alternate boot disk.

At the prompt below, supply the name of the disk containing the volumes to be mirrored.

Enter disk name

6 Enter list

The system displays the Disk Group screen (Figure 59 on page 162).
3 Replacing the Hard Disk Drive

Figure 59. Disk Group Screen

<table>
<thead>
<tr>
<th>Disk group: rootdg</th>
</tr>
</thead>
<tbody>
<tr>
<td>DM NAME</td>
</tr>
<tr>
<td>dm disk00</td>
</tr>
<tr>
<td>dm disk00</td>
</tr>
</tbody>
</table>

Enter disk name

7 Enter disk00

The system displays the following message:

You can choose to mirror volumes from disk disk00 onto any available disk space, or you can choose to mirror onto a specific disk. To mirror to a specific disk, select the name of that disk. To mirror to any available disk space, select "any".

Enter destination disk [<disk>,list,q,?] (default: any)

8 Enter disk01

The system displays the following message:

The requested operation is to mirror all volumes on disk disk00 in disk group rootdg onto available disk space on disk disk01.
NOTE: This operation takes a long time to complete. Continue with the operation?

9 Enter y

The system displays the following message:

Mirror volume standvol
Mirror volume swapvol
Mirror volume rootvol
Mirror volume disk006vol
Mirror volume home3
Mirror volume mtce
Mirror volume oracle
Mirror volume tmp
Mirror volume voice1
Mirror volume voxem
Mirror volume vs

Mirroring of disk disk01 is complete.

Mirror volumes on another disk? [y,n,q,?] (default:n)

10 Enter n

The system displays the Volume Manager Support Operations screen (Figure 49 on page 129).

11 Enter q
Removing Mirroring

To remove mirroring, do the following:

1. At the UNIX prompt, enter `/mtce/bin/rmvolmirr`

2. The system displays the following message:
   
   Choose a VolumeName from the following list:
   ALL standvol swapvol rootvol mtce oracle tmp vs
   Enter VolumeName or ALL:

3. Enter ALL

   The system displays the following message for each volume:

   Mirroring for xxx volume has been turned off.
   Volume mirror xxx has been removed.

   where xxx is the volume name.
Disk Reuse

Reusing for Mirroring

To reuse an existing speech disk for mirroring, do the following:

1. Log in as root.

   **Note:** In the following steps, `home3` is the volume where the speech files are stored.

2. Enter `umount /home3`

3. Enter `voledit -rf rm home3`

4. Establish mirroring. See [Establishing Mirroring on page 159](#), and begin with [step 4](#).

Reusing for Speech

To reuse an existing mirrored disk for speech, do the following:

1. Log in as root.

2. Remove mirroring. See [Removing Mirroring on page 164](#).
3 Add a disk for speech storage. See Adding a Hard Disk Drive to a System for Speech Storage on page 149, and begin with step 3.

4 Move the speech to the speech disk. See Moving the Speech to the Speech Disk on page 152.
4 Replacing Other Components

Overview

This chapter describes the correct procedures for replacing the following components on the Intuity CONVERSANT system. Information is also provided on the correct configuration and settings for the individual components.

- Backplane
- Cables
- Cartridge tape drive
- Circuit card cage fans
- Diskette drive
- Filter
- Memory modules
- Power supplies
- Terminator SIPs
Note: For circuit card replacement procedures, see Chapter 2, Installing or Replacing Circuit Cards. For hard disk drive replacement procedures see Chapter 3, Replacing the Hard Disk Drive.

Replacing the Electromagnetic Interference Reduction Components

Before connecting peripherals or external devices, install toroids and/or ferrites to each interface cable. All installations require the installation of toroids and ferrites as described in the following procedures to meet the individual country agency electromagnetic compatibility (EMC) regulations.

A toroid (Type A), used only on a MAP/40P system, is a 2.5 inch (6.4 cm) circular ferrite. Toroids are made of a highly conductive carbon type of material that is very brittle. If a toroid ring fractures, it should immediately be replaced.

A ferrite (Type B) is a 1 inch (2.5 cm) rectangular device. Ferrites are made of a variable conductive carbon type material to reduce special EMI (electromagnetic interference) frequency band width. Available in split and solid ferrite forms, a special snap-back protective cover is used to install and keep the halves together.
Table 14 on page 169 lists the ferrites to be installed on a MAP/40P system that uses the AYC10 Tip/Ring circuit card. Table 15 on page 170 lists the ferrites to be installed on a MAP/40P system that uses the AYC30 Tip/Ring circuit card.

**Note:** Table 14 on page 169 and Table 15 on page 170 contain data for a MAP/40P system installed with a 200 MHz CPU

**Table 14. MAP/40P Ferrite Installation Using the AYC10 Tip/Ring Circuit Card**

<td>• Wrap the modular cable once around each ferrite.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Wrap each modular cable twice through the toroid.</td>
</tr>
</tbody>
</table>

See [Installing a Toroid on the MAP/40P on page 175](#) for general toroid installation.

### General Toroid and Ferrite Installation Guidelines

⚠️ **CAUTION:**

Handle toroids and ferrites with care. Toroids and ferrites are easily fractured or broken. Immediately replace any fractured or broken toroids or ferrites as they are no longer effective for EMC control.

When installing toroids or ferrites:

- Install toroids or ferrites to cables as required.
- Minimize the amount of cable between the toroids or ferrites and the computer chassis.
• Wrap cables as tightly as possible. Do not leave large amounts of slack in the loop(s).
• Use cable ties, when required, behind the ferrites to keep the ferrites in place.

Installing a Ferrite

To install a ferrite, do the following:

1. Open the ferrite by gently pulling the fastener away from the body of the ferrite.
2. Place the cord or cable in the groove inside the ferrite (Figure 60 on page 172).

Note: Maintain minimum cable lead length between the ferrite and the computer chassis.
Figure 60. Example Ferrite (Type B) Installation

1. Ferrite in open position
2. Ferrite in snapped closed position
3. Cable tie
4. To the computer
If the cable is to be wrapped around the ferrite, wrap the cable tightly around half of the ferrite and place the cable into the groove (Figure 61 on page 173).

If the cable is to be wrapped around two ferrites, ensure the second ferrite is close to the first ferrite assembly (Figure 62 on page 174).

Figure 61.  Example of Cable Wrapped Around Ferrite
3  Gently snap the ferrite shut.

4  Attach a cable tie (Figure 60 on page 172), when required, directly behind the last ferrite to secure it.

**Note:** If the cable is wrapped around the ferrite(s), no cable tie is required.

5  Trim the cable tie.
Installing a Toroid on the MAP/40P

The following is the general toroid installation procedure to be used on a MAP/40P system. Figure 63 on page 176 shows an example of a paired toroid installation.

To install a toroid, do the following:

1. Place the toroid close to the computer chassis.
2. Wrap each modular cable tightly around the toroid.
3. Secure the cable(s) with a small cable tie to reduce cable movement.
4. Trim off any excess from the cable tie.
Figure 63. Example Toroid Installation

Cable tie

Toroids (2)

Cable tie
Replacing the Backplane

The following procedures detail removing and installing the backplane. The backplane (Figure 64 on page 178) is located in the MAP/40P card cage area as shown in Figure 65 on page 179.
Figure 64. MAP/40P Backplane

1. Attach power cable here. Align from top with wires:
   - red red white black black

2. Attach power cable here. Align from top with wires:
   - black black blue yellow red orange

3. Attach power cable here. Align from top with wires:
   - red red black black

4. Voltage measurement points

4. Peripheral Bay 2 - cartridge tape drive
5. Peripheral Bay 3 - diskette drive
6. Circuit card cage fan
7. Peripheral Bay 4 - Hard Disk Drive 0
8. Peripheral Bay 5 - Hard Disk Drive 1
Removing the Backplane

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2, in Chapter 1, Getting Inside the Computer.

To remove the backplane, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, perform the following Steps a and b.
4  Replacing Other Components

Replacing the Backplane

3 Remove the incoming power. See Removing Power from the MAP/40P in Chapter 1, Getting Inside the Computer.

4 Remove the dress cover. See Removing the Dress Cover in Chapter 1, Getting Inside the Computer.

5 Remove all of the circuit cards. See Removing a Circuit Card, in Chapter 2, Installing or Replacing Circuit Cards.

Note: Pay close attention to the backplane connector slots from which each circuit card is removed. The circuit cards will need to be replaced in the same slots in the new backplane. See Component Assignments in Appendix A, System Configuration, for circuit card placement.

6 Unplug all power lead connectors.

Note: Make a note of the connector locations. Connectors are polarized but not keyed.

7 Remove the ten screws that secure the backplane to the MAP/40P.

8 Lift the backplane from the MAP/40P.

Installing the Backplane

To install the backplane, do the following:

1 Remove the new backplane from its ESD protective wrapping.
Note: Keep the package and all ESD-protective wrapping to return the defective unit. Re-use of the original replacement unit packaging is necessary to meet the manufacturer’s warranty.

2 Mount the new backplane to the MAP/40P chassis using the ten screws you removed in step 7 of the procedure in Removing the Backplane on page 180.

Note: Make sure no wiring is trapped between standoffs and backplane. Redress the COM2 cable to a position near and under the CPU.

3 Connect all power cables that you removed in step 6 of the procedure in Removing the Backplane on page 180.

4 Seat the CPU circuit card and the video controller card. See Installing a Circuit Card on page 14, in Chapter 2, Installing or Replacing Circuit Cards.

Note: Be sure to mount these cards in their correct backplane slot. See Component Assignments on page 466 in Appendix A, System Configuration, for these locations.

5 With the MAP/40P still disassembled, connect the COM2 interface and keyboard to the appropriate connectors on the CPU board.

6 Connect the video monitor cord to the video monitor interface plug termination on the video controller board.

7 Connect the disk activity LED cable assembly to the CPU.
8 Restore power to the MAP/40P. See Restoring Power to the MAP/40P, in Chapter 1, Getting Inside the Computer.

9 Check for the following indications that the system is properly connected:

- The +5, -5, +12, or -12 volt DC locations marked on the backplane read + (plus) or - (minus) 0.25 volt with respect to the correct voltages.

  - The monitor shows indications that the MAP/40P is attempting to boot. A self-check of memory is displayed on the terminal.
  - The diskette drive LED will temporarily light, indicating diskette drive bus activity and proper cable connection.

If the system is assembled properly, the machine will finish its boot process in approximately 2 minutes and remain in an idle state, waiting for system login. If the system is not assembled properly, repeat Steps 1 through 13 above.

**Note:** Depending on the particular configuration of the MAP/40P being serviced, error messages may be displayed on the screen indicating that certain circuit cards are not in their proper slots. This will not affect the MAP/40P’s attempt to boot, and the error messages should subside when the system is fully operational with the four circuit cards.

- The card cage fan begins operating.
Replacing Cables

This section provides procedures for replacing the:
• Diskette cable
• Keyboard cable
• SCSI cable

Replacing the Diskette Cable

The diskette cable (Figure 66 on page 185) connects the diskette drive to the P5 200-MHz CPU circuit card.
Figure 66. Diskette Cable Routing
Removing the Diskette Cable

To remove the diskette cable, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, do the following.

3. Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer, for this procedure.

4. Remove dress cover and access panel. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer, for these procedures.

5. Disconnect the diskette cable from the P5 200 MHz CPU circuit card.

6. Disconnect the diskette cable from the diskette drive.
7 Gently pull the diskette cable through the holes (Figure 67 on page 187) in the internal sheet metal into the card cage area of the MAP/40P.

**Figure 67. MAP/40P Internal Sheet Metal Holes**

1. Hole for routing power supply cables to backplane
2. Hole for routing SCSI cable and diskette cable to P5 200 MHz CPU
3. Hole for routing keyboard, reset, and LED cables
8 Remove the diskette cable from the chassis.

**Installing a Diskette Cable**

To install a diskette cable, do the following:

1 Carefully slide the cross over end of the diskette cable through the cable hole (*Figure 67 on page 187*) from the card cage area to the peripheral bay area.

2 Connect the diskette cable to the diskette drive.

3 Connect the diskette cable to the P5 200 MHz CPU circuit card.

4 Replace the dress cover. See *Replacing the Dress Cover on page 10* in Chapter 1, *Getting Inside the Computer*.

5 Apply power to the MAP/40P. See *Restoring Power to the MAP/40P on page 10* in Chapter 1, *Getting Inside the Computer*.

**Replacing the Keyboard Cable**

The keyboard cable (*Figure 68 on page 189*) connects the keyboard port to the P5 200 MHz CPU circuit card.
1. LED cables
2. Reset cable
3. Disk activity cable, attach to CPU
4. Keyboard interface
5. Keyboard cable, attach to CPU
6. Keyboard cable
7. Keyboard port
To remove the keyboard cable, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, do the following.

3. Remove the incoming power. See *Removing Power from the MAP/40P on page 6*, in *Chapter 1, Getting Inside the Computer*.

4. Remove dress cover and access panel. See *Removing the Dress Cover on page 9*, in *Chapter 1, Getting Inside the Computer*.

5. Remove the circuit cards in Slots 1 through 6. See *Removing a Circuit Card on page 12*, in *Chapter 2, Installing or Replacing Circuit Cards*.

6. Disconnect the keyboard cable from the keyboard interface (*Figure 69 on page 191*).
Replace Other Components

Replacing Cables

Figure 69. Keyboard Interface

7 Disconnect the keyboard port from the MAP/40P chassis by removing the two screws (Figure 70 on page 192).

8 Remove the keyboard cable from the MAP/40P.
Figure 70. Back View of the MAP/40P

1. AC power inlet receptacle
2. AC power supply outlet
3. External SCSI I/O connector
4. Parallel port
5. COM2
6. Keyboard connector
7. Power supply fan exhaust
8. Mouse connector - (not used)
9. Video connector
10. COM1
To install a keyboard cable, do the following:

1. Connect the keyboard cable to the keyboard interface (Figure 69 on page 191).

2. Attach the keyboard port to the MAP/40P chassis (Figure 70 on page 192) using the screws removed in step 7 of the procedure in Removing the Keyboard Cable on page 190.

3. Replace the circuit cards removed in step 5 of the procedure in Removing the Keyboard Cable on page 190. See Installing a Circuit Card in Chapter 2, Installing or Replacing Circuit Cards, for the procedure.

4. Replace the dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.

5. Connect the keyboard to the keyboard port.

6. Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.

Replacing the SCSI Cable

The SCSI cable (Figure 71 on page 194) connects the hard disk drives and cartridge tape drive to the P5 200 MHz CPU circuit card.
Figure 71. SCSI Cable Routing
To remove the SCSI cable, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, do the following:

3. Remove the incoming power. See Removing Power from the MAP/40P on page 6 in *Chapter 1, Getting Inside the Computer*.

4. Remove dress cover and access panel. See Removing the Dress Cover on page 9 in *Chapter 1, Getting Inside the Computer*.

5. Disconnect the SCSI cable from the P5 200 MHz CPU circuit card.

6. Disconnect the SCSI cable from the external SCSI connector circuit card.

7. Disconnect the SCSI cable from the hard disk drives.
8 Disconnect the SCSI cable from the cartridge tape drive.

9 Gently pull the SCSI cable through the holes (Figure 67 on page 187) in the internal sheet metal into the peripheral bay area of the MAP/40P.

10 Remove the SCSI cable from the chassis.

Installing a SCSI Cable

To install a SCSI cable, do the following:

1 Identify the tape drive and the two, closely-positioned hard disk connectors.

2 Slide this end of the cable into the peripheral bay area, with the dark wire nearest you, and around to the hard disk drives.

3 Continue back around with the single-connector end to the rear of the tape drive. See Figure 71 on page 194.

4 Attach one end of the SCSI cable to the cartridge tape drive.

5 Attach the SCSI cable to the hard disk drives.

6 Attach the SCSI cable to the P5 200 MHz CPU circuit card.

7 Attach the SCSI cable to the external SCSI connector circuit card.

8 Replace the dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.

9 Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.
Replacing the Cartridge Tape Drive

The cartridge tape drive ([Figure 72 on page 198](#)) is located in Position 2 of the peripheral bay ([Figure 78 on page 216](#)). The following procedures detail removal and installation of the cartridge tape drive for the MAP/40P:

- [Removing the Cartridge Tape Drive on page 198](#)
- [Installing the Cartridge Tape Drive on page 200](#)

⚠️ **CAUTION:**

Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See [Protecting Against Damage from Electrostatic Discharge on page 2](#) in Chapter 1, Getting Inside the Computer.
Removing the Cartridge Tape Drive

To remove the cartridge tape drive, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.
2 If the system is in service, perform the following Steps a and b.

   a Stop the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.

   b Shut down the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.

   c Shut down the Intuity CONVERSANT system. See “Shut Down the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

3 Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer.

4 Remove dress cover and bezel. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer.

5 Remove the power cord connector from the back of the cartridge tape drive.

6 Remove the SCSI bus cable assembly connection from the back of the cartridge tape drive.

7 Remove the four screws that mount the cartridge tape drive to the peripheral bracket. Two of the screws are accessed through holes in the MAP/40P chassis.
4 Replacing Other Components

Replacing the Cartridge Tape Drive

8 Slide the cartridge tape drive forward and remove it.

9 Place the cartridge tape drive upside down, with the printed circuit board facing up, on an ESD-protected surface.

Installing the Cartridge Tape Drive

To install a cartridge tape drive, do the following:

1 Remove the new cartridge tape unit from its ESD-protective wrapping.

Note: Keep the package and all ESD-protective wrapping to return the defective unit. Re-use of the original replacement unit packaging is necessary to meet the manufacturer’s warranty.

2 Verify the jumper settings were set correctly by the manufacturer (Figure 73 on page 201).
4 Replacing Other Components

Replacing the Cartridge Tape Drive

Figure 73. Jumper Settings for the 2-Gbyte SCSI Cartridge Tape Drive, SCSI ID = 3

1. Parity
2. SCSI ID 3

3 Slide the new cartridge tape drive unit into the peripheral bracket. Ensure the front of the cartridge tape drive is flush with the other units in the peripheral bracket.

4 Secure the cartridge tape drive using the four screws removed in step 7 of Removing the Cartridge Tape Drive on page 198.

5 Attach the SCSI cable to the cartridge tape drive.

6 Attach the power cable that is provided with the system power supply wiring.
4 Replacing Other Components

Replacing the Circuit Card Cage Fan

7 Replace the dress cover and bezel. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.

8 Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.

Replacing the Circuit Card Cage Fan

The MAP/40P contains three fans that provide cooling inside the unit. The first is located inside the power supply and is not serviceable. Never attempt repairs to this fan. If it fails, you must replace the entire power supply. See Replacing the Power Supply on page 231 for more information.

The other two fans are located in front of the card cage, behind the front cover panel. They are mounted on a support plate and force airflow through the MAP/40P chassis, across the circuit cards as illustrated in Figure 65 on page 179.

Procedures to replace the circuit card cage fan include:

• Removing a Circuit Card Cage Fan on page 203
• Installing a Circuit Card Cage Fan on page 205
Removing a Circuit Card Cage Fan

To remove a circuit card cage fan, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, perform the following Steps a and b.

3. Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, *Getting Inside the Computer*.

4. Remove the dress cover. See Removing the Dress Cover on page 9 in Chapter 1, *Getting Inside the Computer*.

5. Remove the two pop rivets that hold the circuit card cage fan to the chassis (Figure 74 on page 204).
Figure 74. Circuit Card Cage Fans

1. Power cable connection leads
6 Unplug the 12-VDC power lead connector.
7 Lift the card cage fan out of the chassis.

Installing a Circuit Card Cage Fan

To install a circuit card cage fan, do the following:

1 Attach the 12-VDC connector.
   The connector is keyed to ensure correct mating.

2 Mount the card cage fan in the MAP/40P chassis and secure it with two pop-rivets (Figure 74 on page 204).

   **Note:** The card cage fan unit must be installed so that air travels through the mounting plate hole towards the card cage area, as shown in Figure 65 on page 179. Locate the air-flow direction indicators to ensure that the fan is properly mounted.

3 Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.

4 Verify that the replacement fan is operating by placing a small sheet of paper across the grill on the intake side of the fan. The paper should adhere to the grill.
   If the fan is operating, continue with step 5.
If the fan is not operating or is spinning very slowly, check all wiring connections and voltages to ensure that the replacement unit is receiving power.

⚠️ CAUTION:
Do not leave the MAP/40P powered up for any length of time or proceed to the next step until the card cage fan is fully operational.

5 Replace the dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.

Replacing the Diskette Drive

The 1.44 Mbyte, 3.5-inch diskette drive is assembled by the manufacturer with a mounting kit. The diskette drive is located in Position 3 of the peripheral bay, as shown in Figure 78 on page 216.

Procedures to replace the diskette drive include:

- Removing the Diskette Cable on page 186
- Installing a Diskette Cable on page 188
CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2 in Chapter 1, Getting Inside the Computer.

Removing the Diskette Drive

To remove the diskette drive, do the following:

1 Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2 If the system is in service, perform the following Steps a, b and c.
   a Stop the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.
   b Shut down the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.
   c Shut down the Intuity CONVERSANT system. See “Shut down the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.
3 Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer.

4 Remove dress cover and bezel. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer.

5 Remove the four screws on the top of the chassis.

These screws hold the peripheral bracket (Figure 75 on page 209) which contains the cartridge tape drive and the diskette drive.
Figure 75. Peripheral Bracket
4 Replacing Other Components Replacing the Diskette Drive

6 Slide the bracket toward the power supply to free it from a keyed fastener then lift it out of the MAP/40P.

7 Remove the power cord connectors from the back of the diskette and tape drives.

8 Remove the SCSI bus cable assembly connection from the back of the tape drive and the floppy cable from the diskette drive.

9 Remove the four 3-millimeter screws that mount the diskette drive to the peripheral bracket.

⚠️ CAUTION:
Keep these four screws separate. These screws are metric. Using any of the other screws associated with the MAP/40P will damage the threads in the diskette drive mounting hardware.

10 Slide the diskette drive forward and remove it.

⚠️ CAUTION:
Handle the diskette drive with care. The spindle motor, stepping motor, and printed circuit board are located on the bottom of the diskette drive. Do not place any force or strain on these components and do not touch the surface of the diskette drive printed circuit board.

11 Place the diskette drive upside down, with the printed circuit board facing up, on an ESD-protected surface.
Installing a Diskette Drive

To install a diskette drive, do the following:

1. Remove the new diskette drive unit from its ESD-protective wrapping.

   **Note:** Keep the package and all ESD-protective wrapping to return the defective unit. Re-use of the original replacement unit packaging is necessary to meet the manufacturer’s warranty.

   The MAP/40P supports the following version of the diskette drive:

   ~ FD-235HF-201
   ~ FD-235HF-3201
   ~ FD-235HF-4429
   ~ FD-235F-5429
   ~ FD-235HF-6429
   ~ FD-235HF-6529
   ~ FD-235HF-7529
   ~ FD-235HF-A529

   Identify the diskette drive you are installing.

2. Verify that the jumpers are set as shown in Figure 76 on page 212 and Figure 77 on page 213.
Note: The jumper settings for the FD-235HF-A529 are the same as those displayed for the FD-235HF-7529.

Figure 76. Diskette Drive Jumper Connections (6429, 6529, 7529, and A529)
Figure 77. Diskette Drive Jumper Connections (201, 3201, 4429, 5429)

- **FD-235HF-201**
  - CC#: 406832584
  - HA: Drive Select 1
  - DS1: Drive Select 1
  - DS1 and HA must be shorted.

- **FD-235HF-3201**
  - CC#: 406832584
  - HA: Intelligent mode
  - Sensing disk type
  - DS1: Drive Select 1
  - DS1 and HA must be shorted.

- **FD-235F-5429**
  - HA: Drive select = 1
  - HA: 720 K mode, fixed
  - DC34: Disk change signal at time = 34
  - REN: Auto recall to track 00 on power up
  - FG: Frame ground
  - FG, REN, DS1, DC34, and HA must be shorted.

- **FD-235F-4429**
  - CC#: 406972646
  - HA: Intelligent mode
  - Sensing disk type
  - DS1: Drive Select 1
  - DS1 and HA must be shorted.
3 Slide the new diskette drive unit into the peripheral bracket. Ensure the front of the diskette drive is flush with the other units in the peripheral bracket.

4 Secure the diskette drive using the four 3-millimeter screws removed in step 9 of Removing the Diskette Drive on page 207.

5 Attach the mini power-cable assembly that is provided with the system power supply wiring.

6 Attach the diskette cable assembly to the diskette drive.
   Ensure that the red bus cable No. 1 conductor tracer indicator (dark wire farthest from you) is towards the bottom of the peripheral bay.

7 Attach the tape drive SCSI and power cables. (Be sure the dark wire of the SCSI is nearest you.)

8 Slide the peripheral bracket into the MAP/40P chassis.

9 Secure the peripheral bracket using the four 3-millimeter screws removed in step 5 of Removing the Diskette Drive on page 207.

10 Replace the dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.

11 Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.
Replacing the Filter

The MAP/40P is equipped with a filter designed to remove dust and debris from the air before the air circulates inside the chassis. The filter is located behind a vented cover which attaches to the lower portion of the bezel (Figure 78 on page 216). The filter should be checked on a regular basis to determine the condition and cleaned if necessary.

Procedures to replace the filter include:

- Removing the Filter on page 217
- Cleaning the Filter on page 217
- Memory and SIMM Description on page 219
4 Replacing Other Components

Replacing the Filter

Figure 78. Front View of the MAP/40P

1. Cartridge tape drive
2. Diskette drive
3. Reset button
4. Power ON LED
5. Hard disk drive usage LED
6. Power ON/OFF switch
Removing the Filter

To remove the filter for replacement or cleaning, do the following.

1. Remove the vented cover from the lower portion of the bezel by pressing down gently on the top of the cover and pulling out.
2. Remove the filter from the vented cover.

Cleaning the Filter

Cleaning the filter should be a part of routine maintenance. Clean the filter with mild soap and water. Allow it to air dry before you replace it.

⚠️ CAUTION:
Do not use heat to dry the filter and do not place a wet or damp filter into the MAP/40P.

Installing the Filter

To install the filter, do the following:

1. Place the filter into the vented cover.
2. Place the vented cover into the bezel by inserting the lower portion behind the bezel, pressing down gently on the top of the cover, and pushing in toward the chassis.

Re replacing Memory Modules

This section describes the memory available with the MAP/40P and includes the following procedures to replace memory modules:

- Identifying a Damaged SIMM on page 221
- Removing SIMMs on page 225
- Installing SIMMs on page 226

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2 in Chapter 1, Getting Inside the Computer.
Memory and SIMM Description

The MAP/40P supports 96 Mbytes of memory for the P5 200 MHz CPU circuit card. The memory is packaged on single in-line memory modules (SIMMs). These modules are placed in sockets located in the top left corner of the CPU circuit card (Figure 79 on page 220).

Installation Rules

The SIMMs must be installed on the CPU using the following rules:

- All SIMMs must be either -6, 60nS or -7, 70nS speed rating.
- SIMMs must be in matched pairs.
- SIMM1 and SIMM2 must both be equipped.
- SIMM1 and SIMM2 must be identical (same part number, speed, size, vendor).
- If SIMM3 and SIMM4 are equipped they must be identical. SIMM3 and SIMM4 can be different than SIMM1 and SIMM2.
The SIMMs must be in one of the following configurations:

- 32 Mbytes consisting of two identical 16-Mbyte SIMMs located in the SIMM1 and SIMM2 sockets.
Replacing Other Components

Repeating Memory Modules

- 64 Mbytes consisting of two identical 32-Mbyte SIMMs located in the SIMM1 and SIMM2 sockets.
- 64 Mbytes consisting of two identical 16-Mbyte SIMMs located in the SIMM1 and SIMM2 sockets and two identical 16-Mbyte SIMMs located in the SIMM3 and SIMM4 sockets.
- 96 Mbytes consisting of two identical 32-Mbyte SIMMs located in the SIMM1 and SIMM2 sockets and two identical 16-Mbyte SIMMs located in the SIMM3 and SIMM4 sockets.
- 128 Mbytes consisting of two identical 32-Mbyte SIMMs located in the SIMM1 and SIMM2 sockets and two identical 32-Mbyte SIMMs located in the SIMM3 and SIMM4 sockets.

Note: The Intuity™ CONVERSANT system will not boot if there is an odd number of SIMMs installed.

Identifying a Damaged SIMM

To determine which of the SIMMs is defective, you must test each pair. One pair of SIMMs must be removed and the system then rebooted using the remaining SIMMs to obtain a reading on the amount of memory available.
Checking for Proper SIMM Seating

To check for proper SIMM seating, do the following:

1. Verify that the replacement SIMM is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, perform the following steps.

3. Remove power from the MAP/40P. See Removing Power from the MAP/40P in Chapter 1, Getting Inside the Computer.

4. Remove the dress cover. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer.

5. Carefully remove the CPU circuit card. See Removing a Circuit Card on page 12 in Chapter 2, Installing or Replacing Circuit Cards, for more information on removing the CPU circuit card.
6 Verify that all SIMMs are properly seated in their slots. If all are properly seated, continue with the procedure in Checking for Defective SIMMs on page 223.

If one or more of the SIMMs are not properly installed or seated, do the following.

a Properly seat the SIMM.

b Replace the CPU circuit card. See P5 200 MHz CPU Circuit Card on page 80 in Chapter 2, Installing or Replacing Circuit Cards, for more information on removing the CPU circuit card.

c Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

If the system shows an amount of memory:

- Equal to that installed on the card, the problem has been corrected.
- Less than that installed on the card, continue with the next procedure, Checking for Defective SIMMs on page 223.

Checking for Defective SIMMs

To check for defective SIMMs, do the following:

1 Remove one of the SIMMs. See Removing SIMMs on page 225.

2 Install a new SIMM, identical to the SIMM which was removed. See Installing SIMMs on page 226.
3 Reinstall the CPU circuit card. See P5 200 MHz CPU Circuit Card on page 80 in Chapter 2, Installing or Replacing Circuit Cards, for more information on installing the CPU circuit card.

4 Restore power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.

5 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

6 Verify the amount of memory as the system reboots.

7 If the amount of memory shown by the system is not equal to the amount of memory installed on the card, one of the remaining SIMMs is defective. Complete step a through step c. If the memory is correct continue with step 8.

   a Remove power from the MAP/40P. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer, for more information on removing the power.

   b Replace the SIMM which was removed in Step 1. See Installing SIMMs on page 226, for more information on replacing the SIMM.

   c Return to step 1 and continue, removing a second of SIMM.

If the amount of memory shown by the system equals the amount of memory installed on the card, the SIMM you removed is defective.
8 Replace the dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer, for more information on replacing these components.

9 Apply power to the unit. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.

Removing SIMMs

To remove a SIMM, do the following:

1 Verify that the replacement SIMMs are on site and appear to be in usable condition.

2 If the system is in service, perform the following steps.
   a Stop the voice system. See “Administer the Voice System,” in Common System Procedures, in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.
   b Shut down the voice system. See “Administer the Voice System,” in Common System Procedures, in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.
   c Shut down the Intuity CONVERSANT system. See “Shut down the System,” in Common System Procedures, in the Intuity CONVERSANT System Reference, 585-313-205.
3 Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer.

4 Remove the dress cover. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer.

5 Remove the CPU circuit card. See Removing a Circuit Card on page 12 in Chapter 2, Installing or Replacing Circuit Cards.

6 Lay the CPU circuit card on a flat, clean, ESD-protected surface.

7 Release the metal snap locks gently at the edge of the SIMM connectors.

8 Rotate the SIMM back and downward to approximately a 60-degree angle.

9 Remove the SIMM.

Installing SIMMs

To install a SIMM, do the following:

1 If the system is in service, perform the following steps.

   a Stop the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.
Replacing Other Components

Replacing Memory Modules

b Shut down the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.

c Shut down the Intuity CONVERSANT system. See “Shut down the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

2 Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer.

3 Remove the dress cover. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer.

4 Remove the CPU circuit card. See Removing a Circuit Card on page 12 in Chapter 2, Installing or Replacing Circuit Cards.

5 Install the SIMM by positioning the new SIMM at approximately a 60-degree angle with respect to the CPU circuit card.

All SIMMs are keyed to prevent them from being inserted incorrectly.

Note: Install a new SIMM in the slot adjacent to the last SIMM installed. Do not leave any empty sockets between SIMMS.

6 Push down at that angle until the SIMM is reset into the SIMM carrier.

7 Snap the SIMM into place by rotating it to an upright position.
The metal snap lock on the ends of the connector for the SIMM will be forced open and then lock when in the upright position.

8 Ensure the connector guide pins are seated into the clearance holes provided at each end of the SIMM.

When properly seated, the guides should be fully extended into the circuit card clearance holes.

9 Reinstall the CPU circuit card. See Installing a Circuit Card on page 14 in Chapter 2, Installing or Replacing Circuit Cards.

10 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

11 Verify the amount of memory as the system reboots.

12 Replace the dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.

13 Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.
Replacing the Power ON/OFF Switch

The power ON/OFF switch is located in the front of the MAP/40P (Figure 65 on page 179).

Removing the Power ON/OFF Switch

To remove the power ON/OFF switch, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, perform the following Steps a and b.

3. Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer.
Remove dress cover. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer.

Remove the four wires which attach to the back of the power ON/OFF switch (Figure 80 on page 230).

Figure 80. Power ON/OFF Switch

- Black wire
- Brown wire
- White wire
- Blue wire
- ON symbol
- OFF symbol
Replacing the Power Supply

The 110/220-VAC power supply is located in the upper right corner of the MAP/40P as shown in Figure 65 on page 179.

Removing the Power Supply

To remove the power supply, do the following:

1. Verify that the replacement equipment is on site and appears to be in usable condition, with no obvious shipping damage.

2. If the system is in service, perform the following Steps a, b and c.

3. Remove the incoming power. See Removing Power from the MAP/40P on page 6 in Chapter 1, Getting Inside the Computer.
4 Remove dress cover. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer.

5 Unplug the connector to the cartridge tape drive (Figure 81 on page 233).

6 Unplug the connector to the diskette drive (Figure 81 on page 233).

7 Unplug the connector to the second hard disk drive, if provided.

8 Unplug the connector to the first hard disk drive (Figure 81 on page 233).
Figure 81. MAP/40P Power Supply Unit

1. Cartridge tape drive power connection
2. Diskette drive power connection
3. Power ON/OFF switch
4. Reset button
5. Hard Disk Drive 1 power connection
6. Hard Disk Drive 0 power connection
7. Backplane power connection
8. Backplane power connection
9. Backplane power connection
9 Remove the circuit cards in PCI slots 1, 2, and 3.
   This is necessary to provide enough clearance to remove the power supply unit from the chassis.

10 Remove the SCSI cable from the P5 200 MHz circuit card.
    This is necessary to provide adequate clearance to access the backplane power supply connectors.

11 Remove the diskette cable from the P5 200 MHz circuit card.
    This is necessary to provide adequate clearance to access the backplane power supply connectors.

12 Disconnect the four wires connecting the output power cord to the power on switch (Figure 81 on page 233).

13 Remove the four screws on the chassis rear area that secure the power supply unit.

14 Slide the unit slightly forward towards the front of the chassis and tilt towards the backplane.

15 Lift and remove the power supply.
Installing a Power Supply

To install the power supply, do the following:

1. Remove the spare power supply unit from the shipping carton.

   **Note:** Keep the package and all ESD-protective wrapping to return the defective unit. Re-use of the original replacement unit packaging is necessary to meet the manufacturer’s warranty.

2. Install the power supply unit into the chassis and align the screw holes.

3. Install the four screws on the chassis rear area that secure the power supply unit.

4. Attach the power supply DC output connectors to the backplane connectors.

5. Attach the four wires connecting the output power cord to the power on switch (Figure 81 on page 233).

6. Attach the connector to the second hard disk drive, if provided.

   If a second hard disk drive is not installed, dress this lead back out of the way to reduce cable congestion as previously outlined (Figure 81 on page 233).

7. Attach the connector to the first hard disk drive (Figure 81 on page 233).

8. Attach the connector to the cartridge tape drive (Figure 81 on page 233).
9. Attach the connector to the diskette drive (Figure 81 on page 233).

10. Connect the SCSI cable to the P5 200 MHz CPU circuit card.

11. Connect the diskette cable to the P5 200 MHz CPU circuit card.

12. Reinstall the circuit cards you removed from PCI slots 1, 2, and 3. See Installing a Circuit Card on page 14 in Chapter 2, Installing or Replacing Circuit Cards.

13. Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.

14. Verify that the replacement power supply unit is functioning properly by doing the following:
   a. Measure the backplane +5V, -5V, +12V and -12V voltages.
   b. Make sure the card cage fans are operating.

15. Replace the dress cover. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.
Replacing a Terminator SIP

If the circuit card is the last circuit card connected to either end of the TDM bus, you must ensure that the TDM bus terminator single in-line packages (SIPs) are in place on the circuit card. If the circuit card is not the last circuit card on the bus, you must remove the SIPs.

**Note:** “Last circuit card connected” means that there are no other cards between the circuit card and the end of the bus. There may, however, be empty connectors.

To replace a terminator SIP, complete the following:

1. Align the terminator SIP with the SIP socket on the circuit card ([Figure 82 on page 238](#)).

   There are markings on both the terminator SIP and the circuit card which should be used to align the terminator SIP.

2. Insert the terminator SIP.
Replacing Other Components

Installing the Tip/Ring Distribution Hardware

Overview

As the number of lines served by the Lucent Intuity system increases, the number of 6-pin modular cords also increases. These 6-pin modular cords connect the system with the customer-premises equipment or the on-premises terminal block provided by the central office.

Optional Tip/Ring distribution hardware is available to help simplify the wiring scheme.

This chapter describes the two types of Tip/Ring distribution hardware and the proper installation procedures for them.

Capacity

The Tip/Ring distribution hardware allows you to connect to a maximum of 48 channels (eight Tip/Ring circuit cards) through two 25-pair, high-density cables (RJ21X).
Types of Tip/Ring Distribution Hardware

There are two types of Tip/Ring distribution hardware:

- Distribution hardware with a 356B adapter
- Distribution panel without a 356B adapter

Tip/Ring Distribution Hardware with a 356B Adapter

The Tip/Ring distribution hardware with the 356B adapter (Figure 83 on page 241) comes in a kit which consists of:

- A 356B adapter
- An adapter bracket
- A mounting plate
- A 25-pair, high-density cable for the first 24 channels

Note: An additional 25-pair, high-density cable is required for the second 24 channels to be supported by the distribution panel. Therefore, if you are connecting 48 channels, you will need another cable that is not part of this kit.
Figure 83. Assembly of MAP/40P Tip/Ring Distribution Hardware with 356B Adapter

2. 356B adapter
3. Grounding plug
4. Grounding wire
5. 25-pin cable
6. Connector
7. Tip/Ring cords
8. Modular jacks
9. Grounding tab
5 Installing the Tip/Ring Distribution Hardware

Tip/Ring Distribution Hardware without a 356B Adapter

The Tip/Ring distribution hardware without the 356B adapter (Figure 84 on page 243) comes in a kit which consists of:

- A distribution panel with a circuit pack assembly mounted in its base
- A top cover plate
- A 25-pair, high-density cable for the first 24 channels

Note: An additional 25-pair, high-density cable is required for the second 24 channels to be supported by the distribution panel. Therefore, if you are connecting 48 channels, you will need another cable that is not part of this kit.
5 Installing the Tip/Ring Distribution Hardware

Types of Tip/Ring Distribution Hardware

Figure 84. MAP/40P Tip/Ring Distribution Hardware Assembly without 356B Adapter
Installing and Connecting the Tip/Ring Distribution Hardware with the 356B Adapter

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2 in Chapter 1, Getting Inside the Computer.

Installing the Tip/Ring Distribution Hardware with the 356B Adapter

1. Verify that the distribution hardware is on site and appears to be in usable condition.

2. If the system is currently connected to the telephone network, notify the service provider that the system is about to be disconnected. The service provider will ask which extensions will be affected.

3. If the system is in service, perform Steps a and b.

Remove the incoming power. See *Removing Power from the MAP/40P on page 6* in Chapter 1, *Getting Inside the Computer*.

Remove dress cover and access panel. See Chapter 1, *Getting Inside the Computer*.

Verify that all of the necessary components are included. See Figure 83 on page 241 for the components.

Place the MAP/40P on its side and install the distribution mounting plate below the circuit card cage on the bottom of the MAP/40P (Figure 83 on page 241).

Locate the two mounting holes which are parallel to those used to mount the support base.

Attach the short end of the mounting plate to the two mounting holes with the two screws provided. The end of the mounting plate should rest against the support base.

Return the MAP/40P to an upright position.

Install the u-shaped adapter brackets with the screws provided. Attach the brackets to the mounting plate.
The u-shape of the bracket should face out with the grounding lug towards the MAP/40P top surface (Figure 83 on page 241).

12 Plug the 3-foot, 6-pin modular cords from the Tip/Ring cards into the 356B adapters. Each adapter can accommodate eight modular cords (Figure 83 on page 241).

13 Using the connector provided, attach the 25-pair, high-density cable to the 356B adapter.

14 Snap the 356B adapters into the adapter bracket. Ensure the modular cords are inside the adapter bracket.

Note: The 356B adapters can be removed by spreading the bracket sides apart.

⚠️ CAUTION:
The 25-pair, high-density cables should come from the top of the adapter brackets.

15 Connect the grounding wire and strap to the top of the adapter bracket.
Connecting the Tip/Ring Distribution Hardware with the 356B Adapter

The numbering scheme for pinouts and channels which shows how to connect the short modular cords provided with the Tip/Ring cards to the distribution hardware is shown in Tip/Ring Circuit Cards on page 17 in Chapter 2, Installing or Replacing Circuit Cards.

Referring to those tables and using the channel numbers on the Tip/Ring cards and the number of the Tip/Ring circuit cards in the system, connect the Tip/Ring card modular jacks to the appropriate jacks on the 356B connectors.

Installing and Connecting the Tip/Ring Distribution Hardware without the 356B Adapter

⚠️ CAUTION: ⚠️
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. See Protecting Against Damage from Electrostatic Discharge on page 2 in Chapter 1, Getting Inside the Computer.
Installing the Tip/Ring Distribution Hardware without the 356B Adapter

1. Make sure that the Tip/Ring distribution hardware assembly kit is on site and appears to be in usable condition.

2. Verify that all of the necessary components are included. See Figure 83 on page 241 for the components.

3. If you are currently connected to the telephone network, notify the service provider that you are disconnecting. They will ask you which extensions will be affected.

4. If the system is in service, perform Steps a and b.

Connecting the Tip/Ring Distribution Hardware without the 356B Adapter

1. Remove the seven screws that secure the distribution panel cover.

2. Put the distribution panel cover aside.
Table 16 on page 249 shows the numbering scheme for connecting the short modular cords provided with the Tip/Ring circuit cards to the panel.

Use this information, the channel numbers on the Tip/Ring circuit cards, and the number of Tip/Ring circuit cards in the system to connect the Tip/Ring circuit card modular jacks to the appropriate jacks on the Tip/Ring distribution panel.

Table 16. Connecting the Modular Cords from the MAP/40P Tip/Ring Circuit Cards to the Tip/Ring Distribution Panel

5 Installing the Tip/Ring Distribution Hardware

4 Make telephone line connections to the MAP/40P with the 25-pair, high-density cable(s) equipped with USOC RJ21X connections.

5 Mount the rear cover plate to the distribution panel cover with the four screws provided.

6 Mount the Tip/Ring distribution panel on a wall or cabinet or allow it to rest on a shelf or the floor.

Completing the Installation

To complete the installation and put the system back in service, do the following:

1. Replace the circuit card access panel and the dress cover and reconnect the keyboard, and the monitor. See Replacing the Dress Cover on page 10 in Chapter 1, Getting Inside the Computer.

2. Apply power to the MAP/40P. See Restoring Power to the MAP/40P on page 10 in Chapter 1, Getting Inside the Computer.

3. Run diagnostics to verify the hardware is functioning properly. See “Diagnostics,” in the Intuity CONVERSANT System Reference, 585-313-205 for more information on running the diagnostics.

4. Notify the service provider that the system is back online, if necessary.
6 Installing Base System Software

Overview

This chapter describes the installation procedures necessary to reload the UnixWare operating system software on a computer that has experienced a disk failure.

Use this chapter in conjunction with Appendix D, Disaster Recovery Checklists.

Note: The installer must have the root password to complete these procedures.
Installing Base System Software

**Note:** Installing the UnixWare operating system unmounts file systems. If this software is being loaded onto a system that has clean hard disks that have not been previously loaded, the system will not detect file systems. If this is a recovery installation, the system will detect previously loaded file systems.

**Beginning the UnixWare Installation**

To load software onto a new or used disk, do the following:

1. Insert the diskette labeled “Intuity CONVERSANT 7 Intuity UnixWare 2.1.2 Boot Floppy 1” into the diskette drive.

2. If the system is off, turn it on using the power switch on the front of the MAP/40P. See *Restoring Power to the MAP/40P on page 10* in Chapter 1, *Getting Inside the Computer*.

   If the system is on, reboot the system. See “Reboot the System,” in “Common System Procedures,” in the *Intuity CONVERSANT System Reference*, 585-313-205.
The system displays the SCO introduction screen as it begins to load the base system software. When the system has loaded the first boot floppy it displays the following message:

Insert the second floppy and press ENTER.

3 Remove the diskette labeled “Intuity CONVERSANT 7 Intuity UnixWare 2.1.2 Boot Floppy 1” from the diskette drive.

4 Insert the diskette labeled “Intuity CONVERSANT 7 Intuity UnixWare 2.1.2 Boot Floppy 2” into the diskette drive.

5 Press ENTER.

The system displays the following message:

Please wait while the system software drivers are loaded.

After approximately 2 minutes the system displays the SCO UnixWare 2.1 menu (Figure 85 on page 255).
6  Press the down arrow to move to **Install/Upgrade UnixWare 2.1** and press **ENTER**.

The system displays the Remove Floppy screen (**Figure 86 on page 255**).

**Figure 86.  Remove Floppy Screen**

<table>
<thead>

<tr>
<td>Remove the Floppy for the floppy drive</td>
<td></td>
</tr>
<tr>
<td>Press ‘ENTER’ to continue</td>
<td></td>
</tr>
</tbody>
</table>
7 Remove the diskette labeled “Intuity CONVERSANT 7 Intuity UnixWare 2.1.2 Boot Floppy 2” from the diskette drive.

8 Press **ENTER**.

The system displays the Introduction screen ([Figure 87 on page 256](#)).

**Figure 87. Introduction Screen**

```plaintext
UnixWare Installation

Welcome to the UnixWare installation process!

If you have never installed UnixWare before, it is recommended that you press the ‘F1’ (or ‘?’) key now to learn more about the installation process and the hardware requirements of UnixWare.

- Pressing the ‘F1’ (or ‘?’) key at any time during installation will display more information or help.
- Pressing the ‘Del’ key at any time cancels the installation.

Press the ‘F1’ (or ‘?’) key for more information or ‘ENTER’ to continue.
```
CAUTION:
If you press DELETE to stop the UnixWare installation at any time during this process, you will have to restart the software installation process at step 1.

9 Continue with the procedure in Setting Up the UnixWare Environment on page 257.

Setting Up the UnixWare Environment

To set up the UnixWare Environment, complete the following:

1 Starting at the Introduction Screen (Figure 87 on page 256), press ENTER.

   The system displays the Keyboard Setup screen (Figure 88 on page 258).
Figure 88. Keyboard Setup Screen

The UnixWare installation procedure supports the following international keyboards. You may select alternate keyboard types by using the left and right arrow keys and then press the ENTER (or RETURN) key.

Keyboard Nationality: U.S. ASCII

When Finished, move the cursor to "Apply" and then press "Enter" to continue.

2 Use the left and right arrows on your keyboard to move through the field selections.

3 Select **U.S. ASCII**.

4 Press the down arrow to move to the Apply field and press **ENTER**.
   The system displays the Configure Date and Time screen (Figure 89 on page 259).
Figure 89. Configure Date and Time Screen

Electrical Installation Configure Date and Time

On this screen, you will check the current date and time that is set on your computer and change them if necessary. You also select what timezone configuration you require. Either set a continent(s) which will lead you onto a further screen with locations or manual entry for a custom timezone.

The current date:
The current Time:
Enter the current year:
Enter the month of the year (1-12):
Enter the day of the month (1-31):
Enter the hour of the day (0-23):
Enter the minute of the hour (0-59):
Timezone configuration:

Press ‘TAB’ to move the cursor between fields. When finished, move the cursor to ‘APPLY’ and then press ‘ENTER’ to continue.

5 Use the left and right arrows on your keyboard to move through the field selections. Use the down arrow to move to the next field.

6 Select the appropriate data for each field.
6 Installing Base System Software

7 Press the down ▼ arrow to move to the Apply field and press ENTER.

The system displays the Continent Location Choice screen (Figure 90 on page 260).

Figure 90. Continent Location Choice Screen

UnixWare Installation Continent Location Choice Screen

On this screen you choose the country/location you are in, having already selected the continent. To go back to the continent screen select ‘Back One Screen’. Use the left and right arrow keys.

Location

Apply  Reset

Press ‘TAB’ to move the cursor between fields. When finished, move the cursor to ‘APPLY’ and then press ‘ENTER’ to continue.

8 Use the left ← and right → arrows on your keyboard to move through the field selections.

9 Select the appropriate data for each field.
6 Installing Base System Software

10 Press the down ▼ arrow to move to the **Apply** field and press **ENTER**.

The system displays the Installation Type Selection screen (Figure 91 on page 261).

**Figure 91. Installation Type Selection Screen**

<table>

</tr>
</tbody>
</table>

13 Press the down ▼ arrow to move to the Apply field and press ENTER.

Note: If the system displays a message that the system must have at least 60 MByte of space in the hard disk drive to install UNIX, the hard disk drive is experiencing problems. The cable may not be connected, or the hard disk drive may be damaged. Power down the system and check the hard disk drive cables. See Removing the Dress Cover on page 9 in Chapter 1, Getting Inside the Computer, for the procedure.

The system displays the Primary Hard Disk Partitioning screen (Figure 92 on page 263).
In order to install UnixWare, you must reserve a partition (a portion of your hard disk’s space) on your primary hard disk for the UNIX System. After you press ‘ENTER’ you will be shown a screen that will allow you to create new partitions, delete existing partitions or change the active partition of your primary hard disk (the partition that your computer will boot from).

WARNING: All files in any partition(s) you delete will be destroyed. If you wish to attempt to preserve any files from an existing UNIX System, do not delete its partition(s).

The UNIX System partition that you intend to use on the primary hard disk must be at least 120 MBs and labeled ‘ACTIVE.’

Press ‘ENTER’ to continue.

14 Continue with the procedure in Initializing the Hard Disk Drives on page 264.
### Initializing the Hard Disk Drives

To partition the hard disk drives, do the following:

1. Starting at the Primary Hard Disk Partitioning screen ([Figure 92 on page 263](#)), press **ENTER**.
   - The system displays the Hard Disk Partitioning, Disk 1 screen ([Figure 93 on page 264](#)).

**Figure 93. Hard Disk Partitioning, Disk 1 Screen**

1. Partition 1

Enter the number of partition you want to boot from:

8 Press ENTER

The system displays the Hard Disk Partitioning, Disk 1 screen Figure 98, on page 270.
If you have a second hard disk drive, the system displays the Secondary Hard Drive Partitioning Screen (Figure 99 on page 271).

If you do not have a second hard disk drive, skip to step 11.
6 Installing Base System Software

Figure 99. Secondary Hard Disk Partitioning Screen

You may use a partition of your secondary hard disk for the UNIX system. If you choose to use a partition of your secondary hard disk you will be shown a screen that will allow you to partition your secondary hard disk.

WARNING: All files in any partition(s) you delete will be destroyed.

If you choose to create a UNIX System partition on your secondary hard disk, it must be at least 40 MBs.

Your Options are:
1. Do not use a partition of the secondary hard disk for the UNIX System.
2. Use a partition of the secondary hard disk for the UNIX System.

Press ‘1’ or ‘2’ followed by ‘ENTER’.

10 Enter 1

The system displays the UnixWare Installation Set Slice Sizes screen (Figure 100 on page 272).
Installing Base System Software

Figure 100. UnixWare Installation Set Slice Sizes Screen

UnixWare Installation Set up File Systems on Disk(s)

Enter filesystem sizes on first disk.

Size of / in MB: xx
Size of /stand in MB: xx
Size of /dev/dump in MB: xx
Size of /dev/swap in MB: xx
Size of /mtce in MB: xx
Size of /vs in MB: xx
Size of /oracle in MB: xx
Size of /tmp in MB: xx
Size of /voice in MB: xx
Size of /voxem in MB: xx

Consult software installation manual for correct sizes.
Megabytes in active partition: Disk 1 - 2063

11 Use the left and right arrows on your keyboard to move through the field selections. Use the down arrow to move to the next field.
12 Enter the appropriate number of megabytes of space needed for each slice as specified in Table 19 on page 273.

**Note:** The sizes listed in Table 19 on page 273 are the recommended minimum sizes. If you are loading a system using a mkimage tape, use the sizes on the tape label. If there are no sizes, use the recommended size. If you are loading a new system, without a mkimage tape, use the recommended sizes.

**Table 19. Minimum Space Requirements for the MAP/40P**

<td></td>
</tr>
</tbody>
</table>

⚠️ CAUTION:

Ignore the message at the top of this screen. Surface analysis is required for all systems because it makes a configuration change to the disk. Failure to perform surface analysis may cause the Intuity CONVERSANT system to fail.

14 Continue with the procedure in Transferring the UnixWare Files on page 276.
Transferring the UnixWare Files

To transfer the UnixWare files, do the following:

1. Starting at the Hard Disk Surface Analysis screen (Figure 101 on page 275), press ENTER.

   This will accept the default of 1 and perform the surface analysis. The system displays the following message:
   
   Checking the hard disk for defects and creating file systems. This will take a few minutes. Please wait.

   After about 5 minutes the system displays the Media Type screen (Figure 102 on page 277).
Figure 102. Media Type Screen

<table>
<thead>
<tr>
<th>UnixWare Installation</th>
<th>Media Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Intuity Software is available on tape as an image depending on the application. You must select the proper choice depending on the application. For new CONVERSANT installation choose option 1. For new Audix installation choose option 2. For restoring CONVERSANT Make-image choose option 3.</td>
<td></td>
</tr>
</tbody>
</table>

Your choices are:
1. UnixWare for Intuity CONVERSANT Tape
2. UnixWare for Intuity Audix
3. Intuity Conversant Make-Image Tape

Press a number between ‘1’ and ‘3’ followed by 'ENTER':

2 Continue with the procedure in Installing the Application Server on page 278.
Installing the Application Server

To Install the application server, do the following:

1. Starting at the Media Type screen (Figure 102 on page 277), enter 1

   The system displays the Insert Tape screen (Figure 103 on page 278).

   ![Figure 103. Insert Lucent Intuity Tape Screen](image)

   UnixWare Installation Insert Intuity Image Tape

   Please insert the Intuity Image cartridge tape into the tape drive and press ‘ENTER’.

   Your choices are:

   1. The tape has been inserted in the tape drive.
   2. Go back to previous menu.

   Press ‘1’ or ‘2’ followed by ‘ENTER’:

   2. Insert the cartridge tape labeled “Intuity CONVERSANT 7.0 Intuity UnixWare 2.1.2 Image Tape for CONVERSANT with Veritas” into the tape drive.

   3. Press ENTER.
Installing Base System Software

This will accept the default of 1 to indicate the tape has been inserted and is ready for access.

The system displays the following message:

Retentioning the tape. This will take about 3 minutes. Please do not remove the tape.

After a few minutes the system displays the following message:

Copying Intuity Image Tape to hard disk. Do not remove tape until prompted to do so.

After about 30 minutes, the system displays the following message:

Please remove the tape from the tape drive.
Press ENTER to continue.

4 Remove the cartridge tape labeled “Intuity CONVERSANT 7.0 Intuity UnixWare 2.1.2 Image Tape for CONVERSANT with Veritas” from the tape drive.

5 Press ENTER.

The system displays the following message:

The UNIX System is now being rebuilt to reflect your selections. This will not require any user input.

Please wait
Activating the Volume Manager

To activate the Volume Manager, complete the following steps.

1. Login as **root**.
   The system displays the following message:
   
   **Password:**

2. Press **ENTER**.

3. At the system prompt, enter **installit**
   The system displays the following message:
   
   Installit execution started:
   The system will attempt to perform a new installation.
   Press enter, to continue the Volume Manager installation...

4. Press **ENTER**.

5. The system automatically reboots three times; each reboot takes approximately 5 minutes to complete.

The system automatically reboots.

Continue with the procedure in [Activating the Volume Manager on page 280](#).
When the initialization of the Volume Manager is complete, the system displays:

```
Console Login:
```

## Installing the LAN Card Driver Package

See [PCI Ethernet LAN Circuit Cards on page 44](#) or [Token Ring Circuit Card on page 53](#) in [Chapter 2, Installing or Replacing Circuit Cards](#), for the procedure.

## Setting up the Monitor

To set up the monitor, do the following:

1. Login as `root`
   - The system displays the system prompt `#`
   - In order to use the graphical user interfaces (GUI) with the video controller card installed in your system, perform the following video setup operations:
   2. Enter `/usr/X/lib/display/setvideomode`
      - The system displays a menu listing the different video chipset options.
   3. Enter `3`
6  Installing Base System Software

This is the number corresponding to the video controller circuit card installed on your system.

The system displays a menu listing monitor mode numbers for video resolution.

4 Enter 13

Note: The mode number corresponds to the video controller circuit card installed on your system. The resolution must be 640 x 480 and the color must be 256.

The system displays the following message:

Video RAM: 2048K

Do you want to change this value? (y/n) [n]:

5 Press ENTER.

The system displays the following message:

Default Monitor Size, 17 inches(y/n) [y]:

6 Enter n

The system displays the Monitor Size screen (Figure 104 on page 283).
6 Installing Base System Software

Setting up the Monitor

Figure 104. Monitor Size Screen

Enter Monitor Size =>

7 Enter 14

The system displays a screen similar to the Monitor Test screen (Figure 105 on page 284).
Figure 105. Monitor Test Screen

You have selected the following:

- **VENDOR.......**: Generic S3 Virge-VS
- **CHIPSET.......**: VIRGE-VX
- **VIDEO RAM.....**: 2048K
- **MONITOR.......**: MULTISYNC 60 Hz
- **RESOLUTION...**: 640x480
- **COLORS.......**: 256

Do you want to test this mode? (y/n) [y]:

8 Press **ENTER**.

The system displays the Test Pattern screen (Figure 106 on page 285).
6 Installing Base System Software

Setting up the Monitor

Figure 106. Test Pattern Screen

A TEST PATTERN WILL BE DRAWN ON YOUR SCREEN.
AFTER A FEW SECONDS, YOU WILL RETURN TO THIS
SCREEN. IF THE PATTERN DOESN’T LOOK RIGHT, YOU
CANNOT USE THIS MODE. YOU SHOULD TRY ANOTHER MODE.
IF THE PATTERN IS NOT EVEN STABLE,
PRESS ‘DEL’ IMMEDIATELY TO AVOID DAMAGE TO YOUR
HARDWARE.

Do you want to continue? (y/n) [y]:

9 Press ENTER.

After the test pattern is drawn, the system displays the following
message:

Do you want to try the test again? (y/n) [n]:

10 Press ENTER to stop the test.

The system displays the following message:

Accept(y), Quit(q), Try another mode(anykey):

11 Enter y to accept the setup.

The system displays the Current Selection screen (Figure 107 on page 286).
6 Installing Base System Software

Initializing the Mouse

Initializing the Mouse

If you want to initialize the mouse, do the following:

1. Enter `mouseadmin` at the system prompt and press `ENTER`.

   The system displays the Mouse Main Menu (Figure 108 on page 287).
6 Installing Base System Software

Initializing the Mouse

Figure 108. Mouse Main Menu

- There are no mice assigned.
- Select one of the following:
  - B) Bus mouse add
  - P) PS2 mouse add
  - S) Serial mouse add
  - T) Test your mouse configuration
  - U) Update mouse configuration and quit
  - E) Exit (no update)

Enter Selection:

2 If you are not installing a mouse, enter e
   If you are installing a mouse, enter s
   The system displays the following message:
   There are no mice assigned.

   Enter the display terminal that will be using the mouse, or strike the ENTER key to return to the main menu.

   Display terminal (i.e., console, s0vt00, etc):

3 Enter console and press ENTER.
The system displays the following message:

Enter the device that the mouse will be attached to or strike the ENTER key to return to the main menu.

Mouse device: (i.e., tty00, tty01):

4 Enter the appropriate data for the serial port your mouse is connected to as listed in Table 20 on page 288.

Note: Be sure to use an available port and not the one assigned to the RMB.

Table 20. Serial Mouse Installation Entries

</tr>
</thead>
<tbody>
<tr>
<td>Console</td>
<td>Serial Mouse on TTY01</td>
</tr>
</tbody>
</table>

Select one of the following:

* B) Bus mouse add
* P) PS2 mouse add
* S) Serial mouse add
* T) Test your mouse configuration
* U) Update mouse configuration and quit
* E) Exit (no update)

Enter Selection:

7 Enter u and press **ENTER**.

The system displays the Mouse Main menu Figure 109 on page 289.

TTY01 shown in Figure 109 on page 289 reflects the port selected in step step 4.

Continue with procedure in Testing the Mouse on page 290.
Testing the Mouse

To test the mouse, do the following:

1. Enter `mouseadmin` at the system prompt and press ENTER.
   The system displays the Mouse Main Menu (Figure 109 on page 289).

2. Enter `t` and press ENTER.
   The system displays the following message:
   Please try using your mouse when the next screen appears.

   Strike the ENTER key when ready:

3. Press ENTER.
   The system displays the following message:
   Press a mouse button to stop test.
   Test will be cancelled automatically in 15 seconds.
   The system displays the Mouse Main Menu (Figure 109 on page 289).

4. Enter `e` and press ENTER.
   You have now installed all the required software for your UnixWare operating system.
7 Installing the Intuity CONVERSANT System Software

Overview

This chapter provides detailed installation procedures to reload the Intuity CONVERSANT system in the event of a disk failure. Use this chapter in conjunction with Appendix D, Disaster Recovery Checklists.
Installing the Intuity CONVERSANT Base Software Set

The Intuity CONVERSANT base software set includes:

- Intuity CONVERSANT Utilities Package
- Intuity CONVERSANT Runtime Processing Package
- Intuity CONVERSANT Maintenance Package
- Intuity CONVERSANT Logger/Alerter Package
- Intuity AUDIX Logger Package
- Intuity CONVERSANT Base ORACLE RDBMS 7.3.2
- Intuity CONVERSANT ORACLE 7 Integration Package
- Intuity CONVERSANT Administration Screens Package
- Intuity CONVERSANT Transaction State Machine Package
- Intuity CONVERSANT Switch Utilities Package
- Intuity CONVERSANT License Modification Package
- Intuity CONVERSANT Platform CONVERSANT Tuning

All of the packages included in the Intuity CONVERSANT base software set are required for the operation of the Intuity CONVERSANT system. All of the packages are contained on one cartridge tape.
To install the Intuity CONVERSANT base software set, do the following:

⚠️ CAUTION:
If you are using this procedure in conjunction with an upgrade, skip the first three steps and begin with step 4.

1. Log in as root.

2. Insert the cartridge tape labeled “Intuity Platform CVIS 7.0 Set 1 of 1” into the cartridge tape drive.

3. Enter `pkgadd -d ctape1`
   The system displays the following message:
   
   Insert a cartridge into Tape Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)

4. Press ENTER.
   The system displays the following message:
   
   Installation in progress. Do not remove the cartridge.

   The following packages are available:
   
   1. CVISset INTUITY CONVERSANT VIS V7 Set (i486)
Select the package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY CONVERSANT VIS V7 Set (CVISset) from <ctape1>
INTUITY CONVERSANT VIS V7 Set
(i486)
Using </> as the package base directory.

Do you want to run the default set installation? (default: y)

6 Answer the questions in Table 21 on page 295 with a check mark for “yes” or “no.”
### Table 21. Questions to Determine if the Default Installation is Appropriate

<table>
<thead>
<tr>
<th>Number</th>
<th>Question</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Do you want to turn off daylight savings time?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>Does your system have a remote maintenance circuit card?</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If you answer yes to this question, you must answer yes to Question 3.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Do you want to disable COM1?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Do you want to disable COM2?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>Do you want to disable the parallel port?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>6</td>
<td>Is Interrupt Level 4 being used by anything other than COM1?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7</td>
<td>Is Interrupt Level 3 being used by anything other than COM2?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8</td>
<td>Is Interrupt Level 7 being used by anything other than the parallel port?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>9</td>
<td>Is your ORACLE database larger than 65 Mbyte</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
If you answered **no** to all of the questions in Table 21 on page 295, you can use the default installation; enter **y**

If you answered **yes** to any of the questions in Table 21 on page 295, you can not use the default installation; complete the following **step a** through **step p**.

**a** Enter **n**

The system displays the following message:

Do you want the default installation for mtce? [y,n,?] 

**b** If you answered **no** to Question 1 in Table 21 on page 295, enter **y** and skip to **step d**.

If you answered **yes** to Question 1 in Table 21 on page 295, enter **n**

The system displays the following message:

Is Daylight Savings Time ever used? [y,n,?] 

**c** Enter **n**

The system displays the following message:

Do you want the default installation for vs? [y,n,?] 

**d** If you answered **no** to all seven Questions 2, 3, 4, 5, 6, 7, and 8 in Table 21 on page 295, enter **y** and skip to **step g**.
If you answered **yes** to Question 2, 3, 4, 5, 6, 7, or 8 in **Table 21 on page 295**, enter **n**

The system displays the following message:

The first serial port uses interrupt level 4  
The second serial port uses interrupt level 3  
The parallel port uses interrupt level 7

If you wish to reclaim some of these interrupts for other devices, you may disable one of these serial ports. However, one serial port must be enabled.

For serial ports would you like to:  
1. Enable both  
2. Enable first, disable second  
3. Disable first, enable second

Please enter your selection:

- **e** If you answered **no** to Questions 2, 3, 4, 6, and 7 in **Table 21 on page 295**, enter **1**
  
- If you answered **no** to Questions 2, 3, and 6 and **yes** for Question 4 or 7 in **Table 21 on page 295**, enter **2**
  
- If you answered **yes** to Question 2, 3, or 6 and **no** for Questions 4 and 7 in **Table 21 on page 295**, enter **3**
Installing the Intuity CONVERSANT System Software

Note: If you would like to disable both serial ports, enter 3, complete the installation procedure, edit the /etc/conf/sdevice.d/asyc file, and reboot the system.

The system displays the following message:

For the parallel port (interrupt 7) would you like to:
1. Enable the parallel port
2. Disable the parallel port

f If you answered no for Questions 5 and 8 in Table 21 on page 295, enter 1

If you answered yes for Question 5 or 8 in Table 21 on page 295, enter 2

The system displays the following message:

Do you want the default installation for maint?

Enter n

Note: There is no difference between the default installation and a custom installation of the maint system.

The system displays the following message:

Do you want the default installation for machlog? [y,n,?]

h If you answered no to Questions 2, 3, and 4 in Table 21 on page 295, enter y and skip to step j.
If you answered yes to Question 2, 3, or 4 in Table 21 on page 295, enter n.

The system displays the following message:

The first serial port uses interrupt level 4
The second serial port uses interrupt level 3

If you wish to reclaim some of these interrupts for other devices, you may have to free some of these ports. However, one serial port must be configured as the alarm port.

For serial ports would you like to:
1. Enable first serial port (COM1) as alarm port
2. Enable second serial port (COM2) as alarm port

Please enter your selection:

i

If you answered no for Questions 2 and 3 and yes for Question 4 in Table 21 on page 295, enter 1.

Note: If your system has a remote maintenance circuit card, make sure COM1 is disabled in the CMOS settings. See P5 200 MHz CPU Circuit Card in Chapter 2, Installing or Replacing Circuit Cards, for the procedure to edit the CMOS settings.

If you answered yes to Questions 2 and 3 and no for Question 4 in Table 21 on page 295, enter 1.
If you answered **yes** to Question 3 and **no** for Questions 2 and 4 in Table 21 on page 295, enter 2

The system displays the following message:

Serial port X has been configured as the alarm port.

j If you answered **no** for Question 9 in Table 21 on page 295, enter y and skip to step 8.

If you answered **yes** for Question 9 in Table 21 on page 295, enter n

The system displays the following message:

Enter a new name or strike ENTER to accept the default.

k Press ENTER.

The system displays the following message:

Enter a new name or strike ENTER to accept the default.

l Press ENTER.

The system displays the following message:

Enter a new name or strike ENTER to accept the default.
Enter a new name or strike ENTER to accept the default.

m Press ENTER.

The system displays the following message:

How many blocks do you want in your database? [default: 132,000].

n Enter the number of blocks you want in your database.

⚠️ CAUTION:
This number must be greater than 24,000.

The system displays the following message:

The default size for each of the redo log files is 800 [512 bytes] blocks.

How many blocks do you want in each of the redo log files? [default: 800].

o Enter the number of blocks you want in your redo log files.

The system displays the following message:

Do you want to install TSM? [y,n,?]

p Enter y
The system displays the following message:

Lucent Technologies Inc.
## Processing package information.
## Processing system information.
## Verifying disk space requirements.
Installing INTUITY CONVERSANT VIS V7.0 Set as <CVISset>
## Executing preinstall script.
Executing the preinstall personality script for CVISTune.
Enter password for oracle:
New password:

⚠️ CAUTION:
If you are using this procedure in conjunction with an upgrade, stop here and return to Intuity CONVERSANT System Version 7.0 Upgrade Procedures. Do not continue with step 8.

8 Type the new password.
9 Press ENTER.

The system displays the following message:

Re-enter new password:

10 Re-type the new password.
11 Press ENTER.
Installing the Intuity CONVERSANT Base Software Set

The system displays a series of messages. After approximately one hour the system displays the following message:

Processing of <INTUITY CONVERSANT VIS V7.0 Set> is completed.

Insert a cartridge into Tape Drive 1.

Type [go] when ready, or [q] to quit: (default: go)

12  Enter q

The system displays the following message:

***IMPORTANT NOTICE***
If installation of all desired packages is complete, the machine should be rebooted in order to ensure sane operation. Execute the shutdown command with the appropriate options and wait for the "Console Login:" prompt.

13  Enter shutdown -i6 -g0 -y
Installing the TCP/IP Packages

All of the UnixWare TCP/IP packages are installed during the installation of the operating system from the cartridge tape labeled “Intuity CONVERSANT VIS V7.0 UnixWare for Intuity 2.1.2.”

• Distributed File System Utilities
• Remote Procedure Calls Utilities
• Internet Utilities

Use the `pkginfo` command to view the list of packages on your system. If these packages are not installed on your system, install them now.

To install the TCP/IP packages, do the following:

1. Enter `pkgadd -d ctape1`
   The system displays the following message:
   
   Insert a cartridge into Tape Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

2. Insert the cartridge tape labeled “Intuity CONVERSANT VIS V7.0 UnixWare for Intuity 2.1.2.”

3. Press `ENTER`. 
Installing the Intuity CONVERSANT System Software

Installing the TCP/IP Packages

The system displays a list of packages from which you must specify yes or no.

4 Enter **yes** for the following packages:
   ~ Distributed File System Utilities
   ~ Remote Procedure Calls Utilities
   ~ Internet Utilities

   Enter **no** for all other packages.

5 Press **ENTER**.

   The system displays the following message:

   Insert a cartridge into Tape Drive 1.
   Type [go] when ready
   or [q] to quit: (default: go)

6 Enter **q**
8 Installing the Optional Feature Software

Overview

Note: All of the procedures in this chapter must be performed with root permission.

This chapter describes the procedures to install all the software that was not included on the application software cartridge tape. This software is called optional since it is not required for the basic system to function. The organization of this chapter is not to imply that you will necessarily install all of these packages nor will you install them in the order documented. Packages that are order-specific are identified as such.

This chapter also describes the general procedure for removing software packages.

The information in this chapter is necessary to reload the optional feature software on a computer that has experienced a disk failure.

Note: Be sure that you have run the Intuity CONVERSANT Hardware Resource Allocator and indicate all hardware that is or will be on your system. The data generated by the program is crucial in assuring that you respond correctly the prompts in this chapter.
Installing Software Packages Using the Unix Management Screens

If your system has been equipped the Unix Management Screens Package, software can be loaded using the Intuity CONVERSANT system screens.

To load software a software package using the Intuity CONVERSANT system screens do the following:

1. Start at the Voice System Administration menu (Figure 110 on page 308).
8 Installing the Optional Feature Software

Installing Software Packages Using the Unix Management Screens

Figure 110. Voice System Administration Menu

![Voice System Administration Menu]

2 Select:

> UNIX Management

> Software Install

The system displays the Software Install menu (Figure 111 on page 309).
Figure 111.  Software Install Menu

3  Select the appropriate media.
4  Continue with the procedures for each package.

Installing the Hardware Resource Allocator Package

Note: You must install and run the Intuity CONVERSANT Hardware Resource Allocator before installing any of the Intuity CONVERSANT System Version 7.0 base or optional packages.

To install the Hardware Resource Allocator package, do the following:

1  If you are not already logged in as root, do so now.
2  Enter **pkgadd -d diskette1**

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)
3 Insert the diskette labeled “Hardware Resource Allocator 1 of 1” into the diskette drive.

4 Press ENTER.

   The system displays the following message:
   
   Installation in progress -- do not remove the diskette.
   
   The following packages are available:
   
   1. config INTUITY Hardware Resource Allocator (i486)
   
   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

   The system displays the following message:

   PROCESSING:
   
   Set: INTUITY Hardware Resource Allocator (config) from <diskette1>
   
   INTUITY Hardware Resource Allocator (i486)
   
   Using </> as the package base directory.
The system displays several status messages and then the following message:

Installation of INTUITY Hardware Resource Allocator (config) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Remove the diskette labeled “Hardware Resource Allocator 1 of 1” from the diskette drive.

7 Enter q
Run the Intuity CONVERSANT Hardware Resource Allocator to obtain a current configuration listing for your system. See Operating the Hardware Resource Allocator on page 468 in Appendix A, System Configuration.

⚠️ CAUTION:
You must run the Intuity CONVERSANT Hardware Resource Allocator and obtain the output from it. The information is needed to install software packages to correctly set addresses for interrupts, I/O, etc.
Installing the Asynchronous Host Toolkit

To install the Asynchronous Host Toolkit package, do the following:

1. If you are not already logged in as root, do so now.
2. Enter `pkgadd -d diskette1`
   
   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready, 
   or [q] to quit: (default: go)
3. Insert the diskette labeled “CGS Asynchronous Host Toolkit 1 of 1” into the diskette drive.
4. Press ENTER.
   
   The system displays the following message:

   Installation in progress -- do not remove the diskette.

   The following packages are available:

   1. asynchost INTUITY CSG Asynchronous Host Toolkit (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:
5. Press ENTER.
The system displays the following message:

PROCESSING:
Set: INTUITY CSG Asynchronous Host Toolkit (asynchost) from <diskette1>
INTUITY CSG Asynchronous Host Toolkit
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.
Enter number of host lines to be configured, 1 or 2:

6 Enter the number of lines to be configured.
This is the number of lines your system will be using to communicate with the host.
~ If you entered 1, the system displays the following message:
Enter asynchronous request function number, 1 or 2:

Note: Entering 1 turns on the DIP for hostreq1 host line only. Entering 2 turns on the DIP for hostreq2 host line only
~ If you entered 2, the system displays the following message:
Enter asynchronous request function number, S or D:

Note: Entering S turns on both host DIPs and they will work independently of each other. Entering D will turn on both host DIPs and they will work in conjunction with each other.
7 Enter the request number function.

The system displays the following message:

Enter tty port for the single line (e.q., ttys02):

**Note:** The tty port number is assigned to the port on the asynchronous circuit card to which you are connecting. See Chapter 3, “Making Cable Connections,” in *Intuity CONVERSANT System Version 7.0 New System Installation*, 538-313-106.

You can also determine the available tty addresses by viewing the `/dev` file.

8 Enter the tty port number you will be using.

The system displays the following message:

Installation of INTUITY CGS Asynchronous Host Toolkit (asynchost) was successful.

Insert diskette into Floppy Drive 1.

Type [go] when ready, or [q] to quit: (default: go)

9 Remove the diskette labeled “CGS Asynchronous Host Toolkit 1 of 1” from the diskette drive.
Installing the ASYNC_TEST Transaction Script Builder Backup

To install the ASYNC_TEST Transaction Script Builder Backup package, do the following:

1. If you are not already logged in as **root**, do so now.

2. **Enter** `pkgadd -d diskette1`
   
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)

3. Insert the diskette labeled “ASYNC_TEST Transaction SB Backup 1 of 1” into the diskette drive.

4. **Press** **ENTER**.
   
   The system displays the following message:
   
   Installation in progress -- do not remove the diskette.

   The following packages are available:
   
   1. asynctest INTUITY ASYNC_TEST SB Backup (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5. **Press** **ENTER**.
The system displays the following message:

PROCESSING:
Set: INTUITY ASYNC_TEST SB Backup (asynctest) from <diskette1>
INTUITY ASYNC_TEST SB Backup (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following
message:

Installation of INTUITY ASYNC_TEST SB Backup (asynctest) was successful.
Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Remove the diskette labeled “ASYNC_TEST Transaction SB Backup
1 of 1” from the diskette drive.
Installing the ASYNC_TEST Speech Script Builder Backup

To install the ASYNC_TEST Speech Script Builder Backup package, do the following:

1. If you are not already logged in as root, do so now.
2. Enter `pkgadd -d diskette1`
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready, 
   or [q] to quit: (default: go)
3. Insert the diskette labeled “ASYNC_TEST Speech SB Backup 1 of 1” into the diskette drive.
4. Press **ENTER**.
   The system displays the following message:
   Installation in progress -- do not remove the diskette.

The following packages are available:
1. asynctest  INTUITY ASYNC_TEST SB Backup (i486)
   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:
5. Press **ENTER**.
Installing the Optional Feature Software

8 Installing the Optional Feature Software

Installing the Asynchronous Host Toolkit

The system displays the following message:

PROCESSING:
Set: INTUITY ASYNC_TEST SB Backup (asynctest) from <diskette1>
INTUITY ASYNC_TEST SB Backup (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY ASYNC_TEST SB Backup (asynctest) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

6 Enter q

7 Remove the diskette labeled “ASYNC_TEST Speech SB Backup 1 of 1” from the diskette drive.
Installing the Adjunct/Switch Application Interface Packages

Procedures to install the ASAI packages must be performed in the following order:

1. Installing the CALLVISOR PC ISDN Package on page 319
2. Installing the CALLVISOR PC LAN Gateway Package on page 322
3. Installing the CALLVISOR PC ASAI Package on page 324

Installing the CALLVISOR PC ISDN Package

To install the CALLVISOR PC ISDN package, do the following:

1. If you are not already logged in as root, do so now.

2. Enter `pkgadd -d diskette1`
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)

3. Insert the diskette labeled “AT&T CALLVISOR PC ISDN Package 1 of 1” into the diskette drive.
4 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:
1. cvisdn AT&T CALLVISOR PC ISDN Package (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: AT&T CALLVISOR PC ISDN Package (cvisdn) from <diskette1>
INTUITY CALLVISOR PC ISDN Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
Enter the number of IPCI boards installed on this machine.
(default: 1) [1-4,?]
8 Installing the Optional Feature Software

6 Enter 0

The system displays the following message:

Enter the desired version. (default: 1) [?]

7 Enter the desired version for the PC/ISDN (IPCI) circuit cards installed in your system

Note: Enter 1 if your system is connected to a G3V3 switch.
Enter 2 if your system is connected to a G3V4 switch.

The system displays the following message:

Enter for higher version operation. (default: 1) [0-1, ?]

8 Press ENTER.

The system displays the following message:

Enter for lower version operation. (default: 1) [0-1, ?]

9 Press ENTER.

The system displays several messages followed by the following message:

The UNIX Operating System kernel will be rebuilt to include your configuration changes during the next system reboot.

Remove the diskette from the drive.
To reboot the system, execute the command:
shutdown -i6 -y -g0

10 Remove the diskette labeled “AT&T CALLVISOR PC ISDN Package 1 of
1” from the diskette drive.

11 Continue with the procedure in Installing the CALLVISOR PC LAN
Gateway Package on page 322.

Installing the CALLVISOR PC LAN Gateway Package

To install the CALLVISOR PC LAN Gateway package, do the following:

1 Enter pkgadd -d diskette1
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

2 Insert the diskette labeled “AT&T CALLVISOR PC LAN Gateway Package
1 of 1” into the diskette drive.

3 Press ENTER.
   The system displays the following message:
   Installation in progress -- do not remove the diskette.
The following packages are available:
1. cvesai AT&T CALLVISOR PC LAN Gateway Package (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

4 Press ENTER.

The system displays the following message:

PROCESSING:
Set: AT&T CALLVISOR PC LAN Gateway Package (cvesai) from <diskette1>
AT&T CALLVISOR PC LAN Gateway Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
This machine currently has X BRA links administered
There are X links available for use as LAN Gateway links.
Enter the number of LAN links to be installed (<=X):

5 Enter the number of LAN links used by your system.

Note: The Intuity CONVERSANT system requires one LAN link. If your system needs additional LAN connections for other software, establish the links now.
The system displays the following message:

Enter the destination for LAN link 1 [Definity]:

6 Enter your system's switch destination.

The UNIX Operating System kernel will be rebuilt to include your configuration changes during the next system reboot.

Installation of the AT&T CALLVISOR PC LAN Gateway Package (cvesai) was successful.

***IMPORTANT NOTICE***
If installation of all desired packages is complete, the machine should be rebooted to ensure sane operation. Execute the shutdown command with appropriate options and wait for the "Console Login:" prompt.

7 Remove the diskette labeled “AT&T CALLVISOR PC LAN Gateway Package 1 of 1” from the diskette drive.

8 Continue with the procedure in Installing the CALLVISOR PC ASAI Package on page 324.

Installing the CALLVISOR PC ASAI Package

To install the CALLVISOR PC ASAI package, do the following:

1 Enter pkgadd -d diskette1
The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
   or [q] to quit: (default: go)

2 Insert the diskette labeled "CALLVISOR PC ASAI Package 1 of 1" into the
diskette drive.

3 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.
The following packages are available:
  1. cvasai  AT&T CALLVISOR PC ASAI Package
     (i486)

Select package(s) you wish to process (or 'all' to process
all packages). (default: all) [?,??,q]:

4 Press ENTER.

The system displays the following message:

Configuring cvasai for X ASAI Node(s)
PROCESSING:
Set: AT&T CALLVISOR PC ASAI Package (cvasai) from
     <diskette1>
Installing the Optional Feature Software

Installing the Adjunct/Switch Application Interface Packages

AT&T CALLVISOR PC ASAI Package
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.
Enter the number of ASAI Nodes.
(default: 1) [1-4,?]

5 Enter the number of ASAI nodes on your system

The system displays several status messages and then the following message:

The UNIX Operating System kernel will be rebuilt to include your configuration changes during the next system reboot.

Remove the diskette from the disk drive.

To reboot the system, execute the command:
shutdown -i6 -y -g0

To power down the system, execute the command:
shutdown -i10 -y -g0

***IMPORTANT NOTICE***
If installation of all desired packages is complete, the machine should be rebooted to ensure sane operation. Execute the shutdown command with appropriate options and wait for the "Console Login:" prompt.

8 Installing the Optional Feature Software

Intuity™ CONVERSANT® System Version 7.0 MAP/40P Maintenance 585-313-108 Issue 2 January 2000 326
Installing the Optional Feature Software

Installation of AT&T CALLVISOR PC ASAI Package (cvasai) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,  
or [q] to quit: (default: go)

6 Enter q

7 Remove the diskette labeled “CALLVISOR PC ASAI Package 1 of 1” from the diskette drive.

8 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

Installing the Adjunct/Switch Application Interface Package

To install the Adjunct/Switch Application Interface package, do the following:

1 If you are not already logged in as root, do so now.

2 Enter pkgadd -d diskette1
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,  
or [q] to quit: (default: go)
3 Insert the diskette labeled “Adjunct/Switch Application Interface Package 1 of 3” into the diskette drive.

4 Press **ENTER**.

The system displays the following message:

```
Installation in progress -- do not remove the diskette.
```

The following packages are available:

1. `asai` INTUITY Adjunct/Switch Application Interface Package (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

5 Press **ENTER**.

The system displays the following message:

```
PROCESSING:
Set: INTUITY Adjunct/Switch Application Interface Package (asai) from <diskette1>
INTUITY Adjunct/Switch Application Interface Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
```
8 Installing the Optional Feature Software

Installing the Adjunct/Switch Application Interface Packages

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Adjunct/Switch Application Interface Package (asai) diskette 2 of 3

Insert diskette 2 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Remove the diskette labeled “Adjunct/Switch Application Interface Package 1 of 3” from the diskette drive.

7 Insert the diskette labeled “Adjunct/Switch Application Interface Package 2 of 3” into the diskette drive.

8 Press ENTER.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Adjunct/Switch Application Interface Package (asai) diskette 3 of 3

Insert diskette 3 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)
8 Installing the Optional Feature Software

9 Remove the diskette labeled "Adjunct/Switch Application Interface Package 2 of 3" from the diskette drive.

10 Insert the diskette labeled "Adjunct/Switch Application Interface Package 3 of 3" into the diskette drive.

11 Press ENTER.

The system displays several status messages and then the following message:

The UNIX Operating System kernel will be rebuilt to include your configuration changes during the next system reboot.

Installation of Adjunct/Switch Application Interface Package (asai) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

12 Enter q

13 Remove the diskette labeled "Adjunct/Switch Application Interface Package 3 of 3" from the diskette drive.
14 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

For more information on this feature package, see Intuity CONVERSANT Version 7.0 Communication Development, 585-313-202.

Installing the Analog Switch Interface Package

To install the Analog Switch Interface package, do the following:

1 If you are not already logged in as root, do so now.

2 Enter `pkgadd -d diskette1`

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)

3 Insert the diskette labeled “Analog Switch Interface - (country) 1 of 1” into the diskette drive.

4 Press ENTER.

   The system displays the following message:

   Installation in progress -- do not remove the diskette.
The following packages are available:
1. usswtch  INTUITY Analog Switch Interface Package
   - US
   (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

**Note:** The analog switch interface package used in this example is for the United States (US). The name will change depending on the country chosen.

5 Press **ENTER**.

The system displays the following message:

PROCESSING:
Set: INTUITY Analog Switch Interface Package - US (usswtch)
from <diskette1>

INTUITY Analog Switch Interface Package - US (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY Analog Switch Interface Package - US (usswtch) was successful.
Installing the Optional Feature Software

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q

7 Remove the diskette labeled “Analog Switch Interface - (country) 1 of 1” from the diskette drive.

Installing the Backup/Restore Utility

To install the Backup/Restore Utility, do the following:

1 At the UNIX prompt, enter pkgadd -d diskette1
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
or [q] to quit: (default: go)

2 Insert the diskette labeled “Backup/Restore Utility 1 of 1” into the diskette drive.

3 Press ENTER.
   The system displays the following message:
   Installation in progress -- do not remove the diskette.
The following packages are available:
1. backrest  INTUITY Backup/Restore Utility (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

4  Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Backup/Restore Utility (backrest) from <diskette1>
INTUITY Backup/Restore Utility (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY Backup/Restore Utility (backrest) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

5  Enter q
8 Installing the Optional Feature Software

Installing the Call Bridge Application Package

To install the Call Bridge Application package, do the following:

1. If you are not already logged in as root, do so now.
2. Enter `pkgadd -d diskette1`
   
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

3. Insert the diskette labeled “Call Bridge Application Package 1 of 1” into the diskette drive.
4. Press ENTER.

For more information on this feature package, see “Back Up the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.
The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:
1. xferdip  INTUITY Call Bridge Application Package (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]: 5

Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Call Bridge Application Package (xferdip) from <diskette1>

INTUITY Call Bridge Application Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
After the installation, do you wish to activate bridging capability? (y/n)

6 Enter y
8 Installing the Optional Feature Software

Installing the Call Classification Analysis Package

The system displays several status messages and then the following message:

Installation of INTUITY Call Bridge Application Package (xferdip) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

7 Enter q

8 Remove the diskette labeled “Call Bridge Application Package 1 of 1”
from the diskette drive.

Installing the Call Classification Analysis Package

Note: If you are installing the package and feature_tst is already
installed on your system (as in assisted upgrades), once you have
finished installing all other desired, you must remove feature_tst
and reinstall it in order to select the CCA test.

To install the Call Classification Analysis package, do the following:

1 Make sure the ASP driver has been installed by entering pkginfo | pg
Installing the Optional Feature Software

Installing the Call Classification Analysis Package

If the ASP driver has been installed there will be a line similar to the following:

```
intuity asp INTUITY ASP Driver Package
```

Continue with step 2.

If the ASP driver has not been installed, see Speech and Signal Processor (AYC43) Circuit Card on page 37, in Chapter 2, Installing or Replacing Circuit Cards, for the procedure to load the driver.

**2** At the UNIX prompt, enter `pkgadd -d diskette1`

The system displays the following message:

```
Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit:  (default: go)
```

**3** Insert the diskette labeled “Call Classification Analysis Package 1 of 1” into the diskette drive.

**4** Press **ENTER**.

The system displays the following message:

```
Installation in progress -- do not remove the diskette.
The following packages are available:
1. cca INTUITY Call Classification Analysis Package (i486)
```
8 Installing the Optional Feature Software

Installing the Call Classification Analysis Package

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,?,?,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Call Classification Analysis Package (cca) from <diskette1>
INTUITY Call Classification Analysis Package
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY Call Classification Analysis Package (cca) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
    or [q] to quit: (default: go)

6 Enter q

The system displays the UNIX prompt.

7 Make sure that the light on the diskette drive is off and remove the diskette.
Installing the Optional Feature Software

## Installing the Data Collection Toolkit

To install the Data Collection Toolkit package, do the following:

1. If you are not already logged in as **root**, do so now.

2. Enter `pkgadd -d diskette1`
   
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

3. Insert the diskette labeled “Data Collection Toolkit 1 of 3” into the diskette drive.

4. Press **ENTER**.
   
   The system displays the following message:
   
   Installation in progress -- do not remove the diskette.
The following packages are available:
1. dctoolkit   INTUITY Data Collection Toolkit (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Data Collection Toolkit (dctoolkit) from <diskette1>
INTUITY Data Collection Toolkit (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
READY TO PROCESS:
Package: INTUITY Data Collection Toolkit (dctoolkit) diskette 2 of 3
Insert diskette 2 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Remove the diskette labeled “Data Collection Toolkit 1 of 3” from the diskette drive.
8 Installing the Optional Feature Software

7 Insert the diskette labeled “Data Collection Toolkit 2 of 3” into the diskette drive.

8 Press ENTER.

The system displays the following message:

READY TO PROCESS:
Package: INTUITY Data Collection Toolkit (dctoolkit) diskette 3 of 3

Insert diskette 3 of 3 into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

9 Remove the diskette labeled “Data Collection Toolkit 2 of 3” from the diskette drive.

10 Insert the diskette labeled “Data Collection Toolkit 3 of 3” into the diskette drive.

11 Press ENTER.

The system displays several status messages and then the following message:

Installation of INTUITY Data Collection Toolkit (dctoolkit) was successful.
Installing the Optional Feature Software

8 Installing the Optional Feature Software

Installing the Dial Pulse Recognition Package

To install the Dial Pulse Recognition package, do the following:

1 If you are not already logged in as root, do so now.
2 Enter `pkgadd -d diskette1`
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)
3 Insert the diskette labeled “Dial Pulse Recognition 1 of 1” into the diskette drive.
4 Press ENTER.
8 Installing the Optional Feature Software

Installing the Dial Pulse Recognition Package

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. dpr INTUITY Dial-Pulse Recognition Package (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Dial-Pulse Recognition Package (dpr) from <diskette1>

INTUITY Dial-Pulse Recognition Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY Dial-Pulse Recognition Package (dpr) was successful.
Installing the Optional Feature Software

Installing the Enhanced Basic Speech Package

To install the Enhanced Basic Speech package, do the following:

1. If you are not already logged in as root, do so now.
2. Enter `pkgadd -d diskette1`

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

3. Insert the diskette labeled “Enhanced Basic Speech Package - Language
   1 of 1” into the diskette drive.
4. Press ENTER.
8 Installing the Optional Feature Software

Installing the Enhanced Basic Speech Package

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. ebspchUS Enhanced Basic Speech - US English - Female (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]: 5

Press ENTER.

The system displays the following message:

PROCESSING:
Set: Enhanced Basic Speech - US English - Female (ebspchUS) from <diskette1>

INTUITY Enhanced Basic Speech - US English - Female (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
Installation of Enhanced Basic Speech - US English - Female (ebspchUS) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)
6 Enter q

7 Remove the diskette labeled "Enhanced Basic Speech Package - Language 1 of 1" from the diskette drive.

Installing the FlexWord Speech Recognition Package

Procedures to install the FlexWord Speech Recognition Package must be performed in the following order:

1 Installing the ASP Driver on page 347
2 Installing FlexWord Recognition - Base on page 348
3 Installing FlexWord Recognition - U.S. English on page 350

Installing the ASP Driver

See Speech and Signal Processor (AYC43) Circuit Card on page 37 in Chapter 2, Installing or Replacing Circuit Cards, for the procedure.
Installing FlexWord Recognition - Base

To install the FlexWord Recognition - Base package, do the following:

2. Ensure that the ASP Driver package has been installed.

3. At the UNIX prompt, enter `pkgadd -d diskette1`

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

4. Insert the diskette labeled “FlexWord Recognition - Base 1 of 1” into the diskette drive.

5. Press ENTER.

   The system displays the following message:

   Installation in progress -- do not remove the diskette.

   The following packages are available:
   1. flexrecog INTUITY FlexWord Recognition - Base (i486)
8 Installing the Optional Feature Software

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

**Note:** If you did not stop the voice system, the system displays the following message at this point:

The voice system is currently running and must be stopped in order to install this package.

Is it ok to STOP the voice system? [y/n]

Enter y

6 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY FlexWord Recognition - Base (flexrecog) from <diskette1>
INTUITY FlexWord Recognition - Base (i486)
Using </> as the package base directory.

The system displays several status messages and then the following message:

Installation of INTUITY FlexWord Recognition - Base (flexrecog) was successful.
8 Installing the Optional Feature Software

Installing the FlexWord Speech Recognition Package

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

7 Enter q

8 Make sure that the light on the diskette drive is off and remove the diskette.

Installing FlexWord Recognition - U.S. English

To install the FlexWord Recognition - U.S. English package, do the following:

1 Stop the voice system. See “Administer the Voice System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205, for the procedure.

2 Ensure that the ASP Driver package has been installed.

3 Ensure the FlexWord Recognition - Base package has been installed.

4 At the UNIX prompt, enter pkgadd -d diskette1

The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)
5 Insert the diskette labeled “FlexWord Recognition - US English 1 of 5” into the diskette drive.

6 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:
1. usflex INTUITY FlexWord Recognition - US English (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

Note: If you did not stop the voice system, the system displays the following message at this point:

The voice system is currently running and must be stopped in order to install this package.

Is it ok to STOP the voice system? [y/n]

Enter y

7 Press ENTER.
Installing the FlexWord Speech Recognition Package

8 Installing the Optional Feature Software

The system displays the following message:

PROCESSING:
Set: INTUITY FlexWord Recognition - US English (usflex) from <diskette1>
INTUITY FlexWord Recognition - US English (i486)
Using /> as the package base directory.
READY TO PROCESS:
Package: INTUITY FlexWord Recognition - US English (usflex) diskette 2 of 5

Insert diskette 2 of 5 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

8 Remove the diskette labeled “FlexWord Recognition - US English 1 of 5” from the diskette drive.

9 Insert the diskette labeled “FlexWord Recognition - US English 2 of 5” into the diskette drive.

10 Press ENTER.

The system displays the following message:

READY TO PROCESS:
Package: INTUITY FlexWord Recognition - US English (usflex) diskette 3 of 5
Insert diskette 3 of 5 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

11 Remove the diskette labeled “FlexWord Recognition - US English 2 of 5” from the diskette drive.

12 Insert the diskette labeled “FlexWord Recognition - US English 3 of 5” into the diskette drive.

13 Press ENTER.

The system displays the following message:

READY TO PROCESS:
Package: INTUITY FlexWord Recognition - US English
(usflex) diskette 4 of 5

Insert diskette 4 of 5 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

14 Remove the diskette labeled “FlexWord Recognition - US English 3 of 5” from the diskette drive.

15 Insert the diskette labeled “FlexWord Recognition - US English 4 of 5” into the diskette drive.

16 Press ENTER.
The system displays the following message:

```
READY TO PROCESS:
Package: INTUITY FlexWord Recognition - US English
           (usflex) diskette 5 of 5

Insert diskette 5 of 5 into Floppy Drive 1.
Type [go] when ready,
   or [q] to quit: (default: go)
```

17 Remove the diskette labeled “FlexWord Recognition - US English 4 of 5” from the diskette drive.

18 Insert the diskette labeled “FlexWord Recognition - US English 5 of 5” into the diskette drive.

The system displays several status messages and then the following message:

```
Installation of INTUITY FlexWord Recognition - US English
           (usflex) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
   or [q] to quit: (default: go)
```

19 Enter q

20 Make sure that the light on the diskette drive is off and remove the diskette.
For more information on this feature package, see *Intuity CONVERSANT Version 7.0 Speech Development, Processing, and Recognition*, 585-313-201.

**Installing the FlexWord Toolkit Package**

To install the FlexWord Toolkit package, do the following:

1. At the UNIX prompt, enter `pkgadd -d diskette1`
   
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.
   Type [go] when ready
   or [q] to quit: (default: go)

2. Insert the diskette labeled “FlexWord Toolkit 1 of 2” into the diskette drive.

3. Press ENTER.
   
   The system displays the following message:
   
   The following packages are available:
   1. FlexTool       INTUITY FlexWord Toolkit
      (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

4 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY FlexWord Toolkit (FlexTool) from <diskette1>
INTUITY FlexWord Toolkit
(i486)
Using </> as the package base directory.
READY TO PROCESS:
Package: INTUITY FlexWord Toolkit (FlexTool)
diskette 2 of 2
Insert diskette 2 of 2 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

5 Remove the diskette labeled “FlexWord Toolkit 1 of 2” from the diskette drive.

6 Insert the diskette labeled “FlexWord Toolkit 2 of 2” into the diskette drive.

7 Press ENTER.

The system displays the following message:

Installation of the FlexWord Toolkit package was successful.
Insert diskette into Floppy Drive 1.
Type [go] when ready
or [q] to quit: (default: go)

8 Enter q

9 Make sure that the light on the diskette drive is off and remove the diskette.

For more information on this feature package, see Intuity CONVERSANT Version 7.0 Speech Development, Processing, and Recognition, 585-313-201.

Installing the Form Filler Application

⚠️ CAUTION:
Talkfiles 8 and 9 are reserved talkfile numbers for Form Filler. If you have other applications that use talkfile numbers 8 or 9, do not erase your phrases; reassign new talkfile numbers to them. To do this, back up the speech in talkfiles 8 and 9, remove the speech, then install the Form Filler package. Once the Form Filler package is installed, restore the speech you backed up so the talkfile is assigned a new number. See Intuity CONVERSANT Version 7.0 Administration, 585-313-501, for information on speech backup with the spsav command.
To install the Form Filler Application package, do the following:

1. If you are not already logged in as root, do so now.

2. Enter `pkgadd -d diskette1`

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

3. Insert the diskette labeled “Form Filler Application 1 of 2” into the diskette drive.

4. Press ENTER.

   The system displays the following message:

   Installation in progress -- do not remove the diskette.

   The following packages are available:
   1. ff     INTUITY Form Filler Application
               (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5. Press ENTER.
The system displays the following message:

**PROCESSING:**
Set: INTUITY Form Filler Application (ff) from <diskette1>
INTUITY Form Filler Application
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

**READY TO PROCESS:**
Package: INTUITY Form Filler Application (ff)
diskette 2 of 2

Insert diskette 2 of 2 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Remove the diskette labeled “Form Filler Application 1 of 2” from the diskette drive.

7 Insert the diskette labeled “Form Filler Application 2 of 2” into the diskette drive.

8 Press **ENTER**.
The system displays several status messages and then the following message:

Changing Form Filler Passwords.
Enter new transcription password:

9 Enter the new transcription password.
The system displays the following message:
Enter new review password:

10 Enter the new review password.
The system displays several status messages and then the following message:

Installation of INTUITY Form Filler Application (ff) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

11 Enter q

12 Remove the diskette labeled “Form Filler Application 2 of 2” from the diskette drive.
Installing the Graphical Speech Editor Package

To install the Graphical Speech Editor package, do the following:

1. If you are not already logged in as root, do so now.

2. Enter `pkgadd -d diskette1`
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

3. Insert the diskette labeled “Graphical Speech Editor Package 1 of 1” into
   the diskette drive.

4. Press ENTER.
   The system displays the following message:
   
   Installation in progress -- do not remove the diskette.
8 Installing the Optional Feature Software

Installing the Graphical Speech Editor Package

The following packages are available:
1. gse INTUITY Graphical Speech Editor
   (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Graphical Speech Editor (gse) from <diskette1>
INTUITY Graphical Speech Editor
   (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY Graphical Speech Editor (gse) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
   or [q] to quit: (default: go)

6 Enter q
7 Remove the diskette labeled “Graphical Speech Editor Package 1 of 1” from the diskette drive.

8 Set up the monitor. See Setting up the Monitor on page 281, in Chapter 6, Installing Base System Software.

9 Initialize the mouse. See Initializing the Mouse on page 286, in Chapter 6, Installing Base System Software.

Note: For additional information about the Graphical Speech Editor, see Intuity CONVERSANT System Version 7.0 Speech Development, Recognition, and Processing, 585-313-201.

Installing the LAN Adapter Setup Program

To install the LAN Adapter Setup Program package, do the following:

1 If you are not already logged in as root, do so now.

2 Enter `pkgadd -d diskette1`

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)
3 Insert the diskette labeled “SMC LAN Adapter Setup Program 1 of 1” into the diskette drive.

4 Press ENTER.

   The system displays the following message:

   Installation in progress -- do not remove the diskette.

   The following packages are available:
   1. ezsetup  SMC LAN Adapter Setup program
      (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

   The system displays the following message:

   PROCESSING:
   Set: SMC LAN Adapter Setup program (ezsetup) from <diskette1>

   SMC LAN Adapter Setup program
   (i386)
   Using </var/spool/pkg> as the package base directory.
   Lucent Technologies Inc.
The system displays several status messages and then the following message:

Installation of SMC LAN Adapter Setup program (ezsetup) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,  
or [q] to quit: (default: go)

6 Enter q
7 Remove the diskette labeled “SMC LAN Adapter Setup Program 1 of 1” from the diskette drive.

Installing the CLEO Packages

Note: The following packages must be installed before installing any of the CLEO packages:
~ UnixWare 2.1.2 operating system
~ Intuity CONVERSANT VIS V7.0 set
~ Token Ring Hardware Support (if you have a Token Ring card)
Use the following rules to guide your package selections:

- Install all the packages (based on the remaining rules in this list) at this time. Do not choose some packages now and then go back later to install more packages. Make all your package selections for installation now.

- If you have the FIFO/SIB synchronous interface card, you must choose package 5 from the menu.

- If you have the Token Ring card, you must choose package 7 from the menu.

- Select packages 1, 2, 3, 4, and 6 in every installation case.

- Perform the procedures to install the packages in the following order:
  a. Installing the cleo_tkrn Package on page 367 and/or Installing the cleo_sib Package on page 369
  b. Installing the cleo_sna_1281u Package on page 375
  c. Installing the cleo_3270 Package on page 378
  d. Installing the cleo_mgmt Package on page 381
  e. Installing the cleo_netman Package on page 383
  f. Installing the cleo_HTE Package on page 386
Installing the cleo_tkrn Package

To install the cleo_tkrn package, do the following:

1. If you are not already logged in as root, do so now.

2. Insert the cartridge tape labeled “CLEO 4.1.2.0 1 of 1” into the cartridge tape drive.

3. Enter `pkgadd -d ctape1`

   The system displays the following message:

   Insert a cartridge into Tape Drive 1.
   Type [go] when ready,  
   or [q] to quit: (default: go)

4. Press ENTER.

   The system displays the following message:

   Installation in progress. Do not remove the cartridge.

   The following packages are available:

   1. cleo3270       cleo_3270, Feature Level 1 (4.1.2.0)  
                       (386) 4.1.2.0
   2. cleoHTE        cleo_hte, Feature Level 2 (4.1.2.0)  
                       (386) 4.1.2.0
   3. mgmt           cleo_mgmt, Feature Level 1 (4.1.2.0)  
                       (386) 4.1.2.0
   4. netman         cleo_netman, Feature Level 1 (4.1.2.0)
8 Installing the Optional Feature Software

Installing the CLEO Packages

Please wait...

Enabling Link Level Drivers

cleo_sna1281u, Link Level (4.1.2.0) installation has detected the following SDLC Frame Size.
265 (256 + 9) bytes

Do you want to change the SDLC Frame Size? (y/n)

6 Enter n

The system displays the following message:

You can use the "cleohw.cfg" utility should you need to change the SDLC Frame Size after the installation.

Enter <CR> to continue.

7 Press ENTER.

The system displays the following message:

A kernel link is required to activate the cleo_sna_1281u, SNA Level (4.1.2.0) installation. In most cases the kernel must be relinked now. However, if the cleo_slim package is to be installed before using the Cleo product the kernel link can
Installing the Optional Feature Software

be postponed. cleo_slim will relink the kernel automatically when installed.

Do you want to link the kernel now?

8 Enter y

The system displays the following message:
The Unix kernel will be rebuilt now.
This will take some time. Please wait

The system then displays the following message and the system prompt:

Installation of the cleo_sna_1281u, SNA Level (4.1.2.0) (snal281u) was successful.

Installing the cleo_3270 Package

To install the cleo_3270 package, do the following:

1 Make sure you have loaded at least one of the following packages:
   ~ cleo_tkrn and or cleo_sib
   ~ cleo_sna_1281u

2 Insert the cartridge tape labeled “CLEO 4.1.2.0 1 of 1” into the cartridge tape drive.
3 Enter `pkgadd -d ctape1`

The system displays the following message:

Insert a cartridge into Tape Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

4 Press `ENTER`.

The system displays the following message:

Installation in progress. Do not remove the cartridge.

The following packages are available:

           (386) 4.1.2.0
Installing the Optional Feature Software

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??, q]

5 Enter 1

The system displays the following message:

PROCESSING:
Package: cleo_3270, Feature Level 1 (4.1.2.0) <cleo3270>
from <->
cleo_3270
(386) (4.1.2.0)
Using <-> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installing cleo_3270, Feature Level 1 (4.1.2.0) (cleo3270).
Please wait.

The system then displays the following message and the system prompt:

Installation of the cleo_3270, Feature Level 1 (4.1.2.0) (cleo3270) was successful.
Installing the cleo_mgmt Package

To install the cleo_mgmt package, do the following:

1. Make sure you have loaded at least one of the following packages:
   ~ cleo_tkrn and or cleo_sib
   ~ cleo_sna_1281u
   ~ cleo_3270

2. Insert the cartridge tape labeled “CLEO 4.1.2.0 1 of 1” into the cartridge tape drive.

3. Enter `pkgadd -d ctape1`

   The system displays the following message:
   Insert a cartridge into Tape Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)

4. Press ENTER.

   The system displays the following message:
   Installation in progress. Do not remove the cartridge.

   The following packages are available:
   
   1 cleo3270  cleo_3270, Feature Level 1 (4.1.2.0)  (386) 4.1.2.0
| 2 | cleoHTE | cleo_hte, Feature Level 2 (4.1.2.0) |
|   |        | (386) 4.1.2.0                     |
| 3 | mgmt   | cleo_mgmt, Feature Level 1 (4.1.2.0) |
|   |        | (386) 4.1.2.0                     |
| 4 | netman | cleo_netman, Feature Level 1 (4.1.2.0) |
|   |        | (386) 4.1.2.0                     |

Please wait.

The system then displays the following message and the system prompt:

Installation of the cleo_netman, Feature Level (4.1.2.0)
(netman) was successful.
Installing the cleo_HTE Package

To install the cleo_HTE package, do the following:

1. Make sure you have loaded at least one of the following packages:
   - cleo_tknn and or cleo_sib
   - cleo_sna_1281u
   - cleo_3270
   - cleo_mgmt
   - cleo_netman

2. Insert the cartridge tape labeled “CLEO 4.1.2.0 1 of 1” into the cartridge tape drive.

3. Enter `pkgadd -d ctape1`
   The system displays the following message:
   
   Insert a cartridge into Tape Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

4. Press `ENTER`.
   The system displays the following message:
   
   Installation in progress. Do not remove the cartridge.
The following packages are available:

1 cleo3270 cleo_3270, Feature Level 1 (4.1.2.0)
   (386) 4.1.2.0
2 cleoHTE cleo_hte, Feature Level 2 (4.1.2.0)
   (386) 4.1.2.0
3 mgmt cleo_mgmt, Feature Level 1 (4.1.2.0)
   (386) 4.1.2.0
4 netman cleo_netman, Feature Level 1 (4.1.2.0)
   (386) 4.1.2.0
5 sib cleo_sib, Link Level (4.1.2.0)
   (386) 4.1.2.0
6 snal281u cleo_sna_128lu, SNA Level, (4.1.2.0)
   (386) 4.1.2.0
7 tkrn cleo_tkrn, Link Level, (4.1.2.0)
   (386) 4.1.2.0

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??, q]

5 Enter 2

The system displays the following message:

PROCESSING:
Package: cleo_HTE, Feature Level (4.1.2.0) <cleoHTE> from <-

  cleo_HTE
   (386) 4.1.2.0
Installing the Optional Feature Software

Installing the CLEO Packages

Using </> as the package base directory.
Lucent Technologies Inc.

The system then displays the following message and the system prompt:

Installation of the cleo_HTE, Feature Level (4.1.2.0)
(cleoHTE) was successful.

Completing the Installation

When all of the chosen packages have been installed the system displays the following message:

1 Remove the cartridge tape from the cartridge tape drive.
2 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

Note: If you should want to change IRQ, I/O Address, RAM Address, and/or SDLC frame size after installing the CLEO software, see cleohw.cfg in the procedure titled “Changing Hardware Configuration using cleohw.cfg” in Chapter 3, “Software installation,” of the CLEO Administration Guide.

You have completed the installation of the CLEO packages. To finish the installation of the host software, go to Installing the Host Packages on page 389.
Installing the Host Packages

When installing the Intuity CONVERSANT Host software, the order in which you install the packages is very important.

**Note:** The Intuity CONVERSANT VIS V7.0 set must be installed before any of the Host packages. If the appropriate hardware (FIFO/SIB and/or Token Ring) is not installed at this time, you may get an error message when you stop and start the voice system:

Make sure you perform the procedures to install the Host software in the following order:

1. [Installing the Synchronous Host Interface Package on page 389](#)
2. [Installing the 3270 Enhanced File Transfer Package on page 391](#)
3. [Installing the NetView Alarm Interface Package on page 393](#)

Installing the Synchronous Host Interface Package

Use the following procedure to install this optional feature package:

1. If you are not already logged in as **root**, do so now.
3 Insert the diskette labeled "Synchronous Host Interface Package 1 of 1" into the diskette drive.

4 Enter `pkgadd -d diskette1`
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready, or [q] to quit: (default: go)

5 Press ENTER.
   The system displays the following message:
   Installation in progress -- do not remove the diskette.
   The following packages are available:
   1. synchost INTUITY Synchronous Host Interface Package (i486)

   Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

6 Press ENTER.
   The system displays the following message:
   PROCESSING:
   Set: INTUITY Synchronous Host Interface Package (synchost) from <diskette1>
Installing the Optional Feature Software

INTUITY Synchronous Host Interface Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of Synchronous Host Interface Package (synchost) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

7 Enter q

8 Make sure that the light on the floppy disk drive is off and remove the diskette.

Installing the 3270 Enhanced File Transfer Package

To install the 3270 Enhanced File Transfer package, do the following:

1 If you are not already logged in as root, do so now.
2 Enter pkgadd -d diskette1
8 Installing the Optional Feature Software

Installing the Host Packages

The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

3 Insert the diskette labeled “3270 Enhanced File Transfer 1 of 1” into the diskette drive.

4 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. fts INTUITY 3270 Enhanced File Transfer Package (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY 3270 Enhanced File Transfer Package (fts) from <diskette1>
INTUITY 3270 Enhanced File Transfer Package (i486)
Installing the Optional Feature Software

Using <>/ as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY 3270 Enhanced File Transfer Package (fts) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q

7 Remove the diskette labeled “3270 Enhanced File Transfer 1 of 1” from the diskette drive.

Installing the NetView Alarm Interface Package

To install the NewView Alarm Interface package, do the following:

1 If you are not already logged in as root, do so now.

2 Enter pkgadd -d diskette1
The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

3. Insert the diskette labeled “3270 Netview Alarm Interface 1 of 1” into the
diskette drive.

4. Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:
1. mtcxmtr    INTUITY 3270 Netview Alarm Interface Package (i486)

Select package(s) you wish to process (or ‘all’ to process
all packages). (default: all) [?,??,q]:

5. Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY 3270 Netview Alarm Interface Package (mtcxmtr)
from <diskette1>
INTUITY 3270 Netview Alarm Interface Package
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY 3270 Netview Alarm Interface Package (mtcxmtr) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q

7 Remove the diskette labeled “3270 Netview Alarm Interface 1 of 1” from the diskette drive.

Once all the host software is installed, see Intuity CONVERSANT Version 7.0 Communications Development, 585-313-202, for more information about using the features.

Installing the ORACLE Development Packages

ORACLE provides many packages that are not required to support the Intuity CONVERSANT system operation. Intuity CONVERSANT system refers to these packages as ORACLE add-on packages.
This section describes the installation procedures for each add-on package. For detailed installation and removal information, see the ORACLE7 for Intel UNIX SVR4 (iABI) Installation & Configuration Guide.

Package List

The ORACLE development packages are included on the following 3 tapes:

- ORACLE 7 Pro*C Package
- ORACLE 7 Developer Toolkit – which contains ORACLE FORMS 4.5.7.12 and ORACLE Reports 2.5.5.4.0

⚠️ CAUTION:

The ORACLE Developer Toolkit cartridge tape contains more ORACLE products than those listed. However, Intuity CONVERSANT system customers must NOT install products that are not listed. Some of the products are already included in the various Intuity CONVERSANT system packages, while other products are not authorized to be used by the Intuity CONVERSANT system customers. A violation of the recommendation may result into the corruption of the Intuity CONVERSANT system software configuration and may be illegal usage of the ORACLE software.

- ORACLE 7 Patch 19
Installation Requirements

The basic requirements for installing ORACLE add-on packages are as follows:

- Intuity CONVERSANT Base ORACLE RDBMS 7.3.2 package is installed.
- The voice system and ORACLE database are stopped during the installation. (You can stop the database by entering `ior s`.)

Procedures

Use the procedures in this section to install the ORACLE development packages.

**Note:** These procedures take approximately 1 hour to complete and must be completed in the order documented.

**Increasing ORACLE File System**

**Note:** This procedure adds 150 Mbytes of space to `/oracle`. This space must be on disk0.

1. Log on to the system as `root`.
2. Enter `addfs /oracle 307200 1024`
Creating a Temporary File System

**Note:** This procedure creates a 230-Mbyte temporary file system. This file system may exist on any disk in the system.

1. Enter the following command sequence:
   ```bash
   mkdir /xtmp
   volassist make xtmp 460800
   mkfs -F vxfs /dev/vx/dsk/xtmp 460800
   mount -F vxfs /dev/vx/dsk/xtmp
   chmod 777 xtmp
   ```

2. Enter `df` to verify the /xtmp file system is mounted.

3. Enter `TMPDIR=/xtmp`

4. Enter `export TMPDIR`

Installing the ORACLE 7 Pro*C Package

1. Enter `pkgadd -d ctape1`
   The system displays the following message:
   ```
   Insert cartridge tape into Tape Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)
   ```

2. Insert the diskette labeled "ORACLE 7.3.2 Pro*C Package" into the cartridge tape drive.
3 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the cartridge.

The following packages are available:
1. proc INTUITY ORACLE 7 Pro*C Package
   (i486) i.3.1

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

4 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY ORACLE 7 Pro*C Package (proc) from <ctapel>

INTUITY ORACLE 7 Pro*C Package
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY ORACLE 7 Pro*C Package (proc) was successful.
Installing the Optional Feature Software

Installing the ORACLE Development Packages

Insert cartridge tape into Tape Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

5 Enter q

6 Make sure that the light on the cartridge tape drive is off and remove the tape.

Note: To select a response other than the screen default, use the TAB key to highlight the selection, and then press ENTER.

1 Insert the tape labeled “ORACLE 7.3.2 Developer 2000 Toolkit” into the cartridge tape drive.

2 Enter the following command sequence:

```
mkdir /xtmp/d2k132
chmod 777 /xtmp/d2k132
su - oracle
cd /tmp/d2k132
cpio -icvdB < /dev/rmt/ctape1
cd /oracle/orainst
./orainst
```

The system displays the following message:

Select the Installer Activity
3 Select **Install/Upgrade/Patch Software Only**.
   The system displays the following message:
   Select the Installer option

4 Select **New Product**.
   The system displays the following message:
   Enter mount point for your software installation.

5 **Enter** `/oracle`
   The system displays the following message:
   Complete `$ORACLE_HOME` location:
   `/oracle/app/oracle/product`

6 **Enter** 7.3.2

7 Press **ENTER** at the confirmation message.
   The system displays the following message:
   Do you want to create DB objects also?

8 Select **No**.
   The system displays the Logging and Status screen:

9 Press **ENTER**.
The system displays the README.FIRST file.

10 Press ENTER to exit the README.FIRST file

11 Press ENTER to avoid displaying the README.FIRST file in the future.

The system displays the following message:

Select one of the following:

(o) Install from CD-ROM
( ) Install from staging area

12 Press TAB, (up arrow), and the spacebar to select **Install from CD-ROM**.

13 Press ENTER.

The system displays the following message:

Enter the pathname of the $ORACLE_LINK directory

14 Enter `/xtmp/d2k132`

The system displays the following message

Select the native language to be installed:

15 Select **American/English**.
The system displays the following message

The `/oracle/app/oracle/product/7.3.2/orainst/root.sh` file already exists. Select one of the following actions:

( ) Append root-related actions to this file
(o) Create new root.sh file

16 Press TAB, (up arrow), and the spacebar to select Append root-related actions to this file.

17 Press ENTER.

The system displays the following message

Post-installation steps that need to be run by root will be written to
/oracle/app/oracle/product/7.3.2/orainst/root.sh

18 Press ENTER.

The system displays the following message

Install online help for:

( ) All Products Being Installed
(o) Products of Your Choice
( ) No Products

19 Press TAB, (up arrow), and the spacebar to select All Products Being Installed.
20 Press ENTER.

The system displays the following message:

Do you want to install UNIX-specific documentation?

21 Select Yes.

The system displays the following message:

Install product documentation from the product documentation CD-ROM for:

(o) All Product Being Installed
( ) Products of Your Choice
( ) No Products

22 Select All Products Being Installed.

The system displays the following message:

Enter the pathname for your $ORACLE_DOC directory
/oracle/app/oracle/doc

23 Press ENTER to select the default pathname.

The system displays the Software Assist Manager screen.

24 Use ⬇ (down arrow) and space bar to highlight the following products:

~ ORACLE FORMS 4.5.7.12
~ ORACLE Reports 2.5.5.4.0
25 Press **TAB** to select **Install**, and then press **ENTER**.

The system displays the following message:

Would you like to install the PL/SQL Procedure Builder demos? (Note: this will take up 5120 bytes of disk space).

26 Select **Yes**.

The system displays the following message:

Please enter the directory where the X-Windows libraries (libxt.a, libX11.a) may be found:

27 Enter `/usr/X/lib`

The system displays the following message:

Please enter the directory where the MOTIF library (libXm.a) is located:

28 Enter `/usr/X/lib`

The system displays the following message:

Would you like to install the ORACLE Graphics 2.5 demos? (Note: this will take up 4405248 bytes of disk space).

29 Select **No**.
The system displays the following message:
Select one or more user interfaces for Oracle Forms...
(x) Character Mode Interface
( ) Motif Bitmapped Interface

30 Select **Character Mode Interface**.

The system displays the following message:
Would you like to install the ORACLE Forms demos?
(Note: this will take up 7963648 bytes of disk space).

31 Select **Yes**.

The system displays the following message:
Select one or more user interfaces for Oracle Reports 2.5...
(x) Character Mode Interface
( ) Motif Bitmapped Interface

32 Select **Character Mode Interface**.

The system displays the following message:
Would you like to install the ORACLE Reports 2.5 demos?
(Note: this will take up 27224064 bytes of disk space).

33 Select **Yes**.
After approximately 30 minutes, the system displays a confirmation message.

34 Select OK.

35 Type x at the Software Asset Manager screen.

36 Press y at the confirmation message.

**Post Installation Setup**

1. At the UNIX system prompt, enter `su - root`
2. Enter the `root` password.
3. Enter `cd /oracle/app/oracle/product/7.3.2/orainst`
4. Enter `. /root.sh`

   The system displays the following message:

   The following environment variables are set as
   
   ORACLE_OWNER= oracle
   ORACLE_HOME= oracle
   ORACLE_SID= A

   Are these settings correct (Y/N)? [Y]

5. Press ENTER.
8 Installing the Optional Feature Software

Post Installation Setup

The system displays the following message:

Enter the full pathname of the local bin directory [/usr/bin]:

6 Press ENTER.

7 The procedure is complete when the UNIX system prompt is returned.

Installing the ORACLE 7 Patch 19

1 Log on to the system as root.

2 Insert the tape labeled “ORACLE 7.3.2 Patch 19” into the cartridge tape drive.

3 Enter the following command sequence:

```bash
cd /xtmp
rm -rf d2k132
cpio -icvdB < /dev/rmt/ctape1
chmod 444 *
su - oracle
mkdir /oracle/app/oracle/product/7.3.2/D2K132_19
cd /oracle/app/oracle/product/7.3.2/D2K132_19
```

The system places you in the directory that you created. The files will be installed to this directory from `/xtmp`.

4 Enter the following command sequence:

```bash
tar -xvf /xtmp.tar.patch19
```
Installing the Optional Feature Software

The system displays a series of file names and sizes before the system prompt appears.

5 Enter `./patch_install.sh` to install the ORACLE 7 Patch 19.

6 Enter `cd ..`

7 Enter `rm -rf D2K132_19` to remove the directory where the patch files were temporarily placed.

Completing Installation

1 Enter the following commands to complete installation of the ORACLE development packages
   
   `umount /xtmp`
   `voledit -rf rm xtmp`

2 Enter `vxdg free` to show the currently available disk space.

Installing the ORACLE SQL*Net TCP/IP Package

To install the ORACLE SQL*Net TCP/IP package, do the following:

1 If you are not already logged in as `root`, do so now.

2 Enter `pkgadd -d diskette1`
The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

3 Insert the diskette labeled “SQL*NET TCP/IP for ORACLE 7.3.2” into the diskette drive.

4 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.
The following packages are available:
1. ora7sql INTUITY SQL*NET TCP/IP for ORACLE 7.3.2 (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY SQL*NET TCP/IP for ORACLE 7.3.2 (ora7sql) from <diskette1>
INTUITY SQL*NET TCP/IP for ORACLE 7.3.2 (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of SQL*NET TCP/IP for ORACLE 7.3.2 (ora7sql) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q

7 Make sure that the light on the floppy disk drive is off and remove the diskette.

For more information on this feature see Intuity CONVERSANT Version 7.0 Communication Development, 585-313-202.
Installing the Primary Rate Interface Packages

Procedures to install the primary rate interface packages include:

- Installing the ISDN Primary Rate Interface Package on page 412
- Installing the Advanced Primary Rate Interface Package on page 415 (restricted availability)

Note: The ISDN primary rate interface package must be installed first.

Installing the ISDN Primary Rate Interface Package

To install the ISDN Primary Rate Interface package, do the following:

1. If you are not already logged in as root, do so now.

2. Enter `pkgadd -d diskette1`
   
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

3. Insert the diskette labeled “ISDN Primary Rate Interface Package 1 of 1” into the diskette drive.

4. Press ENTER.
The system displays the following message:
Installation in progress -- do not remove the diskette.

The following packages are available:
1. pri INTUITY ISDN Primary Rate Interface Package (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY ISDN Primary Rate Interface Package (pri) from <diskette1>

INTUITY ISDN Primary Rate Interface Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

WARNING: Before this package can function, the T1/E1 Driver package must be installed and then reboot the system to complete installation of the T1/E1 Driver package
The system displays several status messages and then the following message:

The UNIX Operating System kernel will be rebuilt now. This will take some time. Please wait.

The UNIX Operating System kernel has been rebuilt.
RM PROFILE_SIZE has been changed.
Reboot before attempting to use this PRI package.

The system displays several status messages and then the following message:

This concludes the steps required to install the 'ISDN Primary Rate Interface' feature. However, additional steps are required to activate the feature. Consult the INTUITY VIS Operations guide for the steps required. Administration must also be done at the connecting end (PBX, ACD, or other switch) to properly configure the T1 or E1 channels.

Installation of INTUITY ISDN Primary Rate Interface Package (pri) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

6 Enter q
7 Remove the diskette labeled “ISDN Primary Rate Interface Package 1 of 1” from the diskette drive.

8 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

For more information on this feature, see:

• Chapter 6, “Switch Interfaces,” of Intuity CONVERSANT Version 7.0 Administration, 585-313-501.

### Installing the Advanced Primary Rate Interface Package

To install the Advanced Primary Rate Interface package, do the following:

1 If you are not already logged in as root, do so now.

2 Enter `pkgadd -d diskette1`

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)
3 Insert the diskette labeled “Advanced PRI Package 1 of 1” into the diskette drive.

4 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.
The following packages are available:
  1. npri INTUITY Advanced PRI Package (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Advanced PRI Package (npri) from <diskette1>
INTUITY Advanced PRI Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
The system displays several status messages and then the following message:

This concludes the steps required to install the ‘Advanced PRI’ feature.

Installation of INTUITY Advanced PRI Package (npri) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q

7 Remove the diskette labeled “Advanced PRI Package 1 of 1” from the diskette drive.

Installing the Script Builder Package

To install the Script Builder package, do the following:

1 If you are not already logged in as root, do so now.

2 Enter pkgadd -d diskette1
The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

3 Insert the diskette labeled “Script Builder 1 of 3” into the diskette drive

4 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.
The following packages are available:
1. sb INTUITY Script Builder
   (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Script Builder (sb) from <diskette1>
INTUITY Script Builder
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.
The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Script Builder (sb)
  diskette 2 of 3

Insert diskette 2 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Remove the diskette labeled “Script Builder 1 of 3” from the diskette drive.
7 Insert the diskette labeled “Script Builder 2 of 3” into the diskette drive.
8 Press ENTER.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Script Builder (sb)
  diskette 3 of 3

Insert diskette 3 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

9 Remove the diskette labeled “Script Builder 2 of 3” from the diskette drive.
10 Insert the diskette labeled “Script Builder 3 of 3” into the diskette drive.
11 Press ENTER.

The system displays several status messages and then the following message:

Installation of Script Builder (sb) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

12 Enter q

13 Remove the diskette labeled “Script Builder 3 of 3” from the diskette drive.

For more information on this feature, see *Intuity CONVERSANT Version 7.0 Application Development with Script Builder*, 585-313-206.
Installing the Script Builder FAX Actions Package

To install the Script Builder FAX Actions package, do the following:

1. At the UNIX prompt, enter `pkgadd -d ctape1`
   The system displays the following message:
   Insert a cartridge tape into Tape Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

2. Insert the tape labeled “Script Builder FAX Actions for Lucent Technologies” into the tape drive.

3. Press ENTER.
   The system displays the following message:
   Installation in progress -- do not remove the cartridge.
   The following packages are available:
   1. sbfax INTUITY Script Builder Fax Actions (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

4  Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Script Builder Fax Actions (sbfax) from <ctapel>
INTUITY Script Builder Fax Actions (i486)
Using </> as the package base directory.

The system displays the following message:

Select the interrupt level for the FAX Circuit Card(s) from the following level:

3  4  5  6  7  9  10  11  12  14  15

enter choice:
5 Enter the interrupt level.

The system displays the following message:

Confirm. Interrupt level X. (y/n)

6 Enter y

The system displays the following message:

REMEMBER to set the jumpers on the FAX circuit card(s) to use interrupt X. Otherwise, the system will not function properly.

Enter the code of the country in which this system will operate. For a list of codes, consult your user documentation. If you decide at a later date to change this setting, simply use the SetPlace.sb utility (see your user documentation.)

Enter choice:

7 Enter the appropriate country code from Table 22 on page 424.

The system displays the following message:

Confirm. The country is X. (y/n)
8 Enter y

The system displays the following message:

Enter the number of faxingDips you want running on your system. Your application will work fine regardless of how many you choose. If you decide at a later date to change this setting, simply use the SetFaxDip.sb utility (see your user documentation.)

⚠️ CAUTION:
Using more than two faxingDips could cause your CPU idle time to be reduced to 0%. This will result in SPIO001 alarm messages and notification of the TSC.

For light expected FAX traffic enter 1
For average expected FAX traffic enter 2
For moderately heavy expected FAX traffic enter 3
For heavy expected FAX traffic enter 4

enter choice:

9 Enter 1 or 2 as appropriate.

The system displays the following message:

Confirm. Number of faxingDips is X. (y/n)

10 Enter y
The system displays the following message:

If you currently have applications that use FAX Actions, re-verify and re-install them for best performance.

Your system will have X running faxingDips

The sbfax has been successfully installed. You must remove the last floppy disk. The system will reboot shortly.

The UNIX Operating System kernel will be rebuilt to include your configuration changes during the next system reboot.

Installation of INTUITY Script Builder Fax Actions (sbfax) was successful.

11 Enter q

12 Make sure that the light on the tape drive is off and remove the tape.

13 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205.

See the Intuity CONVERSANT Version 7.0 Application Development with Script Builder, 585-313-206, for more information on using Script Builder FAX Actions, as well as procedures to install the diskettes labeled “SBFAX_demo Backup Speech” and “Transmissions.”
Installing the Unix Management Screens Package

To install the UNIX Management Screens Package, do the following:

1. At the UNIX prompt, enter `pkgadd -d diskette1`
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,  
       or [q] to quit: (default: go)

2. Insert the diskette labeled “Unix Management Screens Package 1 of 1” into the diskette drive.

3. Press ENTER.
   The system displays the following message:
   Installation in progress -- do not remove the diskette.
   The following packages are available:
   1. unixmgmt  INTUITY Unix Management Screens Package
      (i486)
   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

4. Press ENTER.
Installing the Unix Management Screens Package

The system displays the following message:

PROCESSING:
Set: INTUITY Unix Management Screens Package (unixmgmt) from <diskette1>

INTUITY Unix Management Screens Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY Unix Management Screens Package (unixmgmt) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
   or [q] to quit: (default: go)

5 Enter q
The system displays the UNIX prompt.

6 Make sure that the light on the diskette drive is off and remove the diskette.
Installing T1 Packages

The T1 packages include:
- Line side T1 interface packages
- T1 E&M package

Installing the Line Side T1 Interface Packages

The line side T1 interface packages are separated by the type of switch to which they will interface. Procedures for the following packages are available:
- Installing the Line Side T1 Interface Package - Definity on page 431
- Installing the Line Side T1 Interface Package - Galaxy on page 434

To install the Line Side T1 Interface Package — Definity, do the following:
1. If you are not already logged in as root, do so now.
2. Ensure that the T1 driver package has been installed.
3 Enter `pkgadd -d diskette1`

The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

4 Insert the diskette labeled “Line Side T1 Package - Definity 1 of 2” into the diskette drive.

5 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. lstld INTUITY Line Side T1 Package - Definity (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,?,q):

6 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Line Side T1 Package - Definity (lstld) from <diskette1>
Installing the Optional Feature Software

Installing T1 Packages

INTUITY Line Side T1 Package - Definity
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Line Side T1 Package - Definity
(lst1d) diskette 2 of 2

Insert diskette 2 of 2 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

7 Remove the diskette labeled “Line Side T1 Package - Definity 1 of 2” from the diskette drive.

8 Insert the diskette labeled “Line Side T1 Package - Definity 2 of 2” into the diskette drive.

9 Press ENTER.

The system displays several status messages and then the following message:

This concludes the steps required to install the ‘Line Side T1 - Definity’ feature. However, additional steps are required to activate the feature. Consult the INTUITY VIS
Operations guide for the steps required. Administration must also be done at the connecting end (PBX, ACD, or other switch) to properly configure the T1 channels.

Installation of INTUITY Line Side T1 Package - Definity (lst1d) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

10 Enter q

11 Remove the diskette labeled “Line Side T1 Package - Definity 2 of 2” from the diskette drive.

To install the Line Side T1 Interface Package — Galaxy, do the following:

1 If you are not already logged in as root, do so now.

2 Ensure that the T1 driver package has been installed.

3 Enter pkgadd -d diskette1

The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)
4 Insert the diskette labeled “Line Side T1 Package - Galaxy 1 of 1” into the diskette drive.

5 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:
1. lstlg INTUITY Line Side T1 Package - Galaxy (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

6 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Line Side T1 Package - Galaxy (lstlg) from <diskette1>
INTUITY Line Side T1 Package - Galaxy (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
The system displays several status messages and then the following message:

This concludes the steps required to install the ‘Line Side T1 - Galaxy’ feature. However, additional steps are required to activate the feature. Consult the INTUITY VIS Operations guide for the steps required. Administration must also be done at the connecting end (PBX, ACD, or other switch) to properly configure the T1 channels.

Installation of INTUITY Line Side T1 Package - Galaxy (lst1g) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

7  Enter q

8  Remove the diskette labeled “Line Side T1 Package - Galaxy 1 of 1” from the diskette drive.

Installing the T1 E&M Package

To install the T1 E&M package, do the following:

1  If you are not already logged in as root, do so now.

2  Ensure that the T1 driver package has been installed.
3 Enter `pkgadd -d diskette1`

   The system displays the following message:

   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)

4 Insert the diskette labeled “T1 E&M Package 1 of 1” into the diskette drive.

5 Press ENTER.

   The system displays the following message:

   Installation in progress -- do not remove the diskette.

   The following packages are available:
   1. tle INTUITY T1 E&M Interface Package (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

6 Press ENTER.

   The system displays the following message:

   PROCESSING:
   Set: INTUITY T1 E&M Interface Package (tle) from <diskette1>
INTUITY T1 E&M Interface Package
(i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

This concludes the steps required to install the ‘T1 E&M Interface Package’ feature. However, additional steps are required to activate the feature. Consult the INTUITY VIS Operations guide for the steps required. Administration must also be done at the connecting end (PBX, ACD, or other switch) to properly configure the T1 channels.

Installation of INTUITY T1 E&M Interface Package (t1em) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
    or [q] to quit: (default: go)

7  Enter q

8  Remove the diskette labeled “T1 E&M Package 1 of 1” from the diskette drive.
Installing the Text To Speech Package

**Note:** If you are installing the TTS package and feature_tst is already installed on your system (as in assisted upgrades), once you have finished installing all other desired, you must remove feature_tst and reinstall it in order to select the TTS test.

To install the TTS package, do the following:

1. **If you are not already logged in as root, do so now.**
2. **Enter** `pkgadd -d diskette1`
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
   or [q] to quit: (default: go)
3. **Insert the diskette labeled “Text to Speech Package 1 of 8” into the diskette drive.**
4. **Press ENTER.**
   The system displays the following message:
   Installation in progress -- do not remove the diskette.
8 Installing the Optional Feature Software

Installing the Text To Speech Package

The following packages are available:
  1. tts  INTUITY Text To Speech Package (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Text To Speech Package (tts) from <diskette1>

INTUITY Text To Speech Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Text To Speech Package (tts)
diskette 2 of 8

Insert diskette 2 of 8 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)
6 Remove the diskette labeled “Text to Speech Package 1 of 8” from the diskette drive.

7 Insert the diskette labeled “Text to Speech Package 2 of 8” into the diskette drive.

8 Press ENTER.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Text To Speech Package (tts)
diskette 3 of 8

Insert diskette 3 of 8 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

9 Remove the diskette labeled “Text to Speech Package 2 of 8” from the diskette drive.

10 Insert the diskette labeled “Text to Speech Package 3 of 8” into the diskette drive.
11 Press **ENTER**.

The system displays several status messages and then the following message:

```
READY TO PROCESS:
Package: INTUITY Text To Speech Package (tts)
diskette 4 of 8
```

Insert diskette 4 of 8 into Floppy Drive 1. 
Type [go] when ready,
    or [q] to quit: (default: go)

12 Remove the diskette labeled “Text to Speech Package 3 of 8” from the diskette drive.

13 Insert the diskette labeled “Text to Speech Package 4 of 8” into the diskette drive.

14 Press **ENTER**.

The system displays several status messages and then the following message:

```
READY TO PROCESS:
Package: INTUITY Text To Speech Package (tts)
diskette 5 of 8
```

Insert diskette 5 of 8 into Floppy Drive 1. 
Type [go] when ready,
    or [q] to quit: (default: go)
8 Installing the Optional Feature Software

15 Remove the diskette labeled “Text to Speech Package 4 of 8” from the diskette drive.

16 Insert the diskette labeled “Text to Speech Package 5 of 8” into the diskette drive.

17 Press ENTER.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Text To Speech Package (tts)
  diskette 6 of 8

Insert diskette 6 of 8 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

18 Remove the diskette labeled “Text to Speech Package 5 of 8” from the diskette drive.

19 Insert the diskette labeled “Text to Speech Package 6 of 8” into the diskette drive.

20 Press ENTER.
The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Text To Speech Package (tts)
   diskette 7 of 8

Insert diskette 7 of 8 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

21 Remove the diskette labeled “Text to Speech Package 6 of 8” from the diskette drive.

22 Insert the diskette labeled “Text to Speech Package 7 of 8” into the diskette drive.

23 Press ENTER.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Text To Speech Package (tts)
   diskette 8 of 8

Insert diskette 8 of 8 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)
8 Installing the Optional Feature Software

Installing the Text To Speech Package

24 Remove the diskette labeled “Text to Speech Package 7 of 8” from the diskette drive.

25 Insert the diskette labeled “Text to Speech Package 8 of 8” into the diskette drive.

26 Press ENTER.

The system displays several status messages and then the following message:

Installation of Text To Speech Package (tts) was successful.
Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

27 Enter q

28 Remove the diskette labeled “Text to Speech Package 8 of 8” from the diskette drive.

For more information on this feature package, see Intuity CONVERSANT Version 7.0 Speech Development, Processing, and Recognition, 585-313-201.
Installing the WholeWord Recognition Packages

Procedures to install the WholeWord recognition packages include:

- Installing the WholeWord Recognition Base Package on page 446
- Installing the WholeWord Recognition Language Package on page 448

Installing the WholeWord Recognition Base Package

**Note:** If you are installing the WholeWord Recognition Base package and feature_tst is already installed on your system (as in assisted upgrades), once you have finished installing all other desired, you must remove feature_tst and reinstall it in order to select the ASR test.

To install the WholeWord Recognition Base package, do the following:

1. If you are not already logged in as **root**, do so now.
2. Enter `pkgadd -d diskette1`
   
   The system displays the following message:
   
   Insert diskette into Floppy Drive 1.  
   Type [go] when ready,  
   or [q] to quit: (default: go)
3 Insert the diskette labeled “WholeWord Recognition - Base 1 of 1” into the diskette drive.

4 Press **ENTER**.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. asr INTUITY WholeWord Recognition - Base (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

5 Press **ENTER**.

The system displays the following message:

PROCESSING:
Set: INTUITY WholeWord Recognition - Base (asr) from <diskette1>

INTUITY WholeWord Recognition - Base (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
Installing the Optional Feature Software

The system displays several status messages and then the following message:

Installation of INTUITY WholeWord Recognition - Base (asr) was successful.
Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q
7 Remove the diskette labeled “WholeWord Recognition - Base 1 of 1” from the diskette drive.

Installing the WholeWord Recognition Language Package

To install the WholeWord Recognition Language package, do the following:

1 If you are not already logged in as root, do so now.
2 Enter pkgadd -d diskette1
   The system displays the following message:
   Insert diskette into Floppy Drive 1.
   Type [go] when ready,
or [q] to quit: (default: go)
3 Insert the diskette labeled “WholeWord Recognition - Language 1 of 1” into the diskette drive.

4 Press \textbf{ENTER}.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. usrecog \hspace{1mm} INTUITY WholeWord Recognition - US English (i486)

Select package(s) you wish to process (or 'all' to process all packages). (default: all) [?,??,q]:

5 Press \textbf{ENTER}.

The system displays the following message:

PROCESSING:
Set: INTUITY WholeWord Recognition - US English (usrecog)
from <diskette1>

INTUITY WholeWord Recognition - US English (i486)
Using </> as the package base directory.
Lucent Technologies Inc.
8 Installing the Optional Feature Software

The system displays several status messages and then the following message:

Installation of INTUITY WholeWord Recognition - US English (usrecog) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q

7 Remove the diskette labeled “WholeWord Recognition - Language 1 of 1” from the diskette drive.

For more information on this feature package, see Intuity CONVERSANT Version 7.0 Speech Development, Processing, and Recognition, 585-313-201.

Installing the Feature Test Script Package

Use the following procedure to install this optional feature package only after all the other optional feature packages have been installed:

1 The voice system must be running. To see if the system is running, use the who -r command.
8 Installing the Optional Feature Software

The voice system is running if the run-level is 4. If the system is not running, execute the `start_vs` command.

2 Enter `pkgadd -d diskette`

The system displays the following message:

Insert diskette into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

3 Insert the diskette labeled “Feature Test Script Package 1 of 3” into the diskette drive.

4 Press ENTER.

The system displays the following message:

Installation in progress -- do not remove the diskette.

The following packages are available:

1. ftst INTUITY Feature Test Script Package
   (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.
The system displays the following message:

PROCESSING:
Set: INTUITY Feature Test Script Package (ftst) from <diskette1>
INTUITY Feature Test Script Package (i486)
Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Do you want to include the Simple CCA test? (y/n)

Note: If you answer y and that package has not been installed on your system, you are given an opportunity to cancel the installation.

The following is an example for Full CCA:

Displaypkg shows that Full CCA is not installed.
You will not be able to test Full CCA with this script.
Type q to quit or return to continue.

6 Enter y

The system displays the following message:

Do you want to include the Full CCA test? (y/n)

7 Enter y
The system displays the following message:

Do you want to include the Playback and Coding test? (y/n)

Enter y

The system displays the following message:

Do you want to include the Chantst test? (y/n)

Enter y

The system displays the following message:

Do you want to include the Transfer Test test? (y/n)

Enter y

The system displays the following message:

Do you want to include the Dial Pulse Recognition test? (y/n)

Enter y

The system displays the following message:

READY TO PROCESS:
Package: INTUITY Feature Test Script Package (ftst) diskette
2 of 3
Insert diskette 2 of 3 into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)
8 Installing the Optional Feature Software

Do you want to include the Speech Recognition test? (y/n)

12 Remove the diskette labeled “Feature Test Script Package 1 of 3” from the diskette drive.

13 Insert the diskette labeled “Feature Test Script Package 2 of 3” into the diskette drive.

14 Press ENTER.

The system displays several status messages and then the following message:

READY TO PROCESS:
Package: INTUITY Feature Test Script Package (ftst) diskette 3 of 3

Insert diskette 3 of 3 into Floppy Drive 1.
Type [go] when ready, or [q] to quit: (default: go)

15 Remove the diskette labeled “Feature Test Script Package 2 of 3” from the diskette drive.

16 Insert the diskette labeled “Feature Test Script Package 3 of 3” into the diskette drive.

17 Press ENTER.
The system displays several status messages and then the following message:

The UNIX Operating System kernel will be rebuilt to include your configuration changes during the next system reboot.

Installation of Adjunct/Switch Application Interface Package (asai) was successful.

Insert diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

18 Enter q
19 Remove the diskette labeled “Feature Test Script Package 3 of 3” from the diskette drive.

Installing the Universal Call ID Package

To install the Universal Call ID package, do the following:

1 If you are not already logged in as root, do so now.
2 Enter pkgadd -d diskette1
The system displays the following message:

Insert a diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

3 Insert the diskette labeled “Universal Call ID Package 1 of 1” into the diskette drive.

4 Press ENTER.

The system displays the following message:

Installation in progress. Do not remove the diskette.
The following packages are available:
1.ucid     INTUITY Universal Call ID (i486)

Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]:

5 Press ENTER.

The system displays the following message:

PROCESSING:
Set: INTUITY Universal Call ID Package (ucid) from <diskette1>
INTUITY Universal Call ID Package (i486)
8 Installing the Optional Feature Software

Using </> as the package base directory.
Lucent Technologies Inc.

The system displays several status messages and then the following message:

Installation of INTUITY Universal Call ID (ucid) was successful

Insert a diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q

The system displays the Console Login prompt.

7 Remove the diskette labeled “Universal Call ID Package” from the diskette drive.

In order to activate this feature, you must specify the UCID Network Node ID. See Chapter 4, “Feature Package Administration,” of Intuity CONVERSANT System Version 7.0 Administration, 585-313-501.

Installing the SNMP Emanate Agent Package

To install the SNMP Emanate Agent package, do the following:

1 If you are not already logged in as root, do so now.
2 Enter `pkgadd -d diskette1`

   The system displays the following message:
   Insert a diskette into Floppy Drive 1.
   Type [go] when ready, 
   or [q] to quit: (default: go)

3 Insert the diskette labeled “Intuity SNMP Emanate Agent” into the diskette drive.

4 Press ENTER.

   The system displays the following message:
   Installation in progress. Do not remove the diskette.

   The following packages are available:
   1.snmp     INTUITY SNMP Emanate Agent (snmp)
               (i486)

   Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [? , ??, q] :

5 Press ENTER.

   The system displays the following message:
   PROCESSING:
   Set: INTUITY SNMP Emanate Agent (snmp) from <diskette1>
8 Installing the Optional Feature Software

Removing Software Packages

INTUITY Emanate Agent
(i486) i.3.1

Using </> as the package base directory.

The system displays several status messages and then the following message:

Installation of INTUITY SNMP Emanate Agent (snmp) was successful

Insert a diskette into Floppy Drive 1.
Type [go] when ready,
or [q] to quit: (default: go)

6 Enter q
The system displays the Console Login prompt.

7 Remove the diskette labeled “Intuity SNMP Emanate Agent” from the diskette drive.

Removing Software Packages

Software packages can be removed using:

- The command line
- The Intuity CONVERSANT screens
Using the Command Line

Use the `removepkg` or `pkgrm` commands to remove a software package from your system. See *Intuity CONVERSANT Version 7.0 Administration*, 585-313-501, book for more information on these commands.

There are some important issues you need to be aware of when removing software from your system:

- Remove all services, functions, or card assignments before removing any software packages.
- When removing the Application software, you are asked if you want to remove speech file systems. Answer no to this prompt.
- During an initial installation of the Base ORACLE RDBMS package, a user called “oracle” is created. This user is NOT removed when the Base ORACLE RDBMS package is removed. Once all the base and add-on ORACLE packages have been removed, if you want to remove the “oracle” user, do so through SYSADM. See Appendix A, “System Administration Features,” in *Intuity CONVERSANT Version 7.0 Administration*, 585-313-501.

To remove software packages, do the following:

1. Enter `displaypkg` at the system prompt `#`

   The system displays all the packages installed on your system.
8 Installing the Optional Feature Software

2 Once you have determined the packages to be removed, enter
   removepkg or pkgrm
   At the prompt, enter the number (as it appears on the screen) beside the
   package you want to remove.

   Repeat Step 2 for each package you want to remove.

⚠️ CAUTION:
After you have removed packages from a UnixWare system, you MUST
reboot the system before reinstalling packages. You can remove more than
one package before rebooting, but you must reboot before reinstalling any
packages.
Using the Intuity CONVERSANT Screens

Note: Your system must have the Unix Management Screens Package installed in order to use this procedure.

To remove software using the Intuity CONVERSANT screens, do the following:

1. Starting at the Voice System Administration menu (Figure 110 on page 308), select

   > UNIX Management
   > Software Remove

The system displays the Software Remove screen (Figure 116 on page 463), which lists the software installed on the system.
## Removing Software Packages

1. Locate the package you wish to remove.
2. Note the number of the package given in the first column.
3. Press **CTRL + D**.

### The following packages are available:

<table>
<thead>
<tr>
<th>Package</th>
<th>Description</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CUISet</td>
<td>INTUITY CONVERSANT VIS 46.0 Set</td>
</tr>
<tr>
<td>2</td>
<td>PerfBack</td>
<td>Perfect Backup and Restore</td>
</tr>
<tr>
<td>3</td>
<td>TSM</td>
<td>INTUITY Transaction State Machine Package</td>
</tr>
<tr>
<td>4</td>
<td>acp</td>
<td>Enhanced Application Compatibility</td>
</tr>
<tr>
<td>5</td>
<td>as</td>
<td>UnixWare for Intuity</td>
</tr>
<tr>
<td>6</td>
<td>asai</td>
<td>INTUITY Adjunct/Switch Application Interface Package</td>
</tr>
<tr>
<td>7</td>
<td>asp</td>
<td>INTUITY ASP Driver Package</td>
</tr>
<tr>
<td>8</td>
<td>atm</td>
<td>Adobe Type Manager(TM)</td>
</tr>
<tr>
<td>9</td>
<td>atm13</td>
<td>ATM Basic Fonts</td>
</tr>
<tr>
<td>10</td>
<td>backrest</td>
<td>INTUITY Backup/Restore Utilities</td>
</tr>
</tbody>
</table>

... 99 more menu choices to follow; (RETURN) for more choices, **(CTRL-D)** to stop display.
The system displays the following message:

```
Select package(s) you wish to process (or ‘all’ to process all packages). (default: all) [?,??,q]
```

5 Enter the number of the package.

   The system displays the name and version number for the package selected.

6 Enter y

   The system removes the package.

**Note:** If the system displays any messages warning of dependencies, enter y again to continue with the software removal.

7 Press **ENTER**.
Overview

This appendix describes the placement of components in the MAP/40P and the operation of the Hardware Resource Allocator. The information is designed to enable technicians to reconfigure the Intuity CONVERSANT system when it is necessary to add or remove hardware.

Topics covered include:
• Component Assignments on page 466
• Operating the Hardware Resource Allocator on page 468
• Configuration Device Data on page 492
Component Assignments

Circuit cards are placed in the MAP/40P in locations called slots. Slots are numbered ISA1 through ISA 10 and PCI 1 through PCI 3 from the bottom of the MAP/40P to the top of the card cage. Slots are accessible from the back of the MAP/40P (Figure 117 on page 467).

Table 23 on page 466 lists the SCSI IDs for the components installed for the Intuity CONVERSANT system.

Table 23. MAP/40P Resource Locations

7. Power supply fan exhaust
8. Mouse connector
9. Video connector
10. COM1
Operating the Hardware Resource Allocator

Operation of the Hardware Resource Allocator includes the following tasks:

- Adding Hardware to an Existing Configuration on page 468
- Removing Hardware from an Existing Configuration on page 473
- Specifying a New Configuration on page 477
- Saving a Configuration on page 482
- Viewing a Configuration on page 484
- Comparing a Configuration on page 489
- Presetting Hardware Resources on page 489

Adding Hardware to an Existing Configuration

When you modify an existing configuration, you may have to change the current resource assignments:

- Differences in slot assignments or serial/parallel port assignments will not require switch settings and/or driver software changes. However, you may need to rearrange the cards and/or cables to fit the new configuration output.
To add hardware to an existing configuration, do the following:

1. Enter `get_config`

   The system displays the following message:

   This program retrieves the `/vs/data/confData` file for a given VIS machine from floppy disk. This file represents the configuration of the machine and is required in order for the `/vs/bin/util/configure` program to upgrade the machine with new or additional hardware.

   Please insert the "CONFIGURATION DATA" floppy for this machine.

   Press <Enter> when ready to proceed...

2. Insert the diskette labeled "Configuration Data" into the diskette drive.

3. Press ENTER.

   The system displays the following message:

   Working.../vs/data/confData retrieved
   UNIX_SV#
4 Make a hard copy of the current configuration by printing the output of the `show_config` command. See Viewing a Configuration on page 484 for an explanation of the `show_config` command.

5 Enter `configure`

   The system displays the following message:

   A configuration file, confData, exits.
   Do you wish to make changes to the previous configuration [y|n]?

6 Enter `y`

   The system displays the following message:

   Reading old configuration. Please wait...
   Successfully read MAP/40P Platform with PCI backplane and P5 200 CPU.
   Adding device ADAPSCSI
   Adding device VIDEO
   Adding device SCSIHD
   Adding device SCSITAPE
   Press any key to continue...

   **Note:** This message depends on your system configuration and may look different than the one shown.

7 Press **ENTER**.
The system displays the Device Menu screen (Figure 122 on page 480).

8 Select the hardware item you want to add to the configuration file. Use the \( \uparrow \) up arrow and \( \downarrow \) down arrow keys to move through the screen.

9 Press ENTER.

10 If the system displays the following message:
   Enter quantity to add (X max in multiples of 1):
   Enter the quantity of this hardware item you want to install in your system.
   If the system does not display this message, continue with step 11.

11 If the system displays the following message:
   Do you wish to preset hardware options for device XXXX [y|n]?
   enter n
   If the system does not display this message, continue with step 12.

12 When the system displays the following message:
   1 XXXX device(s) added.
   Press Enter to continue...
   press ENTER.
   The system displays the Device Menu screen (Figure 122 on page 480).
When you are done adding hardware to the configuration press **d**

The system displays the following message:

```
Configuration complete and successful.
Configuration data written to file: /vs/data/confData.
```

View the new configuration file to make sure you have added the correct hardware. See Viewing a Configuration on page 484 for the procedure.

Make the necessary adjustments on the installed hardware based on the new configuration.

Save the new configuration. See Saving a Configuration on page 482 for the procedure.

Enter **hconchk**

The system displays the following message:

```
hconchk: The hardware configuration check is complete.
```
Removing Hardware from an Existing Configuration

When you modify an existing configuration, you may have to change the current resource assignments:

- Differences in slot assignments or serial/parallel port assignments will not require switch settings and/or driver software changes. However, you may need to rearrange the cards and/or cables to fit the new configuration output.

- Differences in INTR, DMAC, IOADDR, or RAMADDR assignments will in most cases require you to change switch settings and reinstall driver software for the affected cards.

To remove hardware from an existing configuration, do the following:

1. Enter `get_config`

   The system displays the following message:

   This program retrieves the /vs/data/confData file for a given VIS machine from floppy disk. This file represents the configuration of the machine and is required in order for the /vs/bin/util/configure program to upgrade the machine with new or additional hardware.

   Please insert the "CONFIGURATION DATA" floppy for this machine.

   Press <Enter> when ready to proceed...
2 Insert the diskette labelled "Configuration Data" into the diskette drive.

3 Press ENTER.
   The system displays the following message:
   Working.../vs/data/confData retrieved
   UNIX_SV#

4 Make a hard copy of the current configuration by printing the output of the show_config command. See Viewing a Configuration on page 484 for an explanation of the show_config command.

5 Enter configure
   The system displays the following message:
   A configuration file, confData, exits.
   Do you wish to make changes to the previous configuration [y|n]?

6 Enter y
   The system displays the following message:
   Reading old configuration. Please wait...
   Successfully read MAP/40P Platform with PCI backplane and P5 200 CPU.
   Adding device ADAPSCSI
   Adding device VIDEO
Adding device SCSIHD
Adding device SCSITAPE

Press any key to continue...

Note: This message depends on your system configuration and may look different than the one shown.

7 Press ENTER.

The system displays the Device Menu screen (Figure 122 on page 480).

8 Press r

The system displays the Currently Selected Devices screen (Figure 118, on page 475).

Figure 118. Currently Selected Devices Screen

Select Device to remove, q to quit

Note: This screen depends on your system configuration and may look different than the one shown.
Place the cursor on the hardware item you want to remove from the configuration file. Use the \( \uparrow \) up arrow and \( \downarrow \) down arrow keys to move through the screen.

**Press ENTER.**

The system displays the following message:

You have currently selected 1 **XX** device(s)
How many do you wish to remove?

Enter the quantity of the hardware item you want to remove from your system.

The system displays the Currently Selected Devices screen (**Figure 118 on page 475**).

If you want to remove additional hardware from your system, repeat step 9 through step 11.

If you are done removing hardware from your system press q

The system displays the Device Menu screen (**Figure 122 on page 480**).

**Press d**

The system displays the following message:

Configuration complete and successful.
Configuration data written to file: /vs/data/confData.
A System Configuration  Operating the Hardware Resource Allocator

14 View the new configuration file to make sure you have removed the correct hardware. See Viewing a Configuration on page 484 for the procedure.

15 Make the necessary adjustments on the installed hardware based on the new configuration.

16 Save the new configuration. See Saving a Configuration on page 482 for the procedure.

17 Enter `hconchk`

The system displays the following message:

```
hconchk: The hardware configuration check is complete.
```

Specifying a New Configuration

To specify a new configuration, do the following:

1 Enter `configure new`

The system displays the Platform Menu screen (Figure 119 on page 478).
Figure 119. Platform Menu Screen

<table>
<thead>
<tr>
<th>Platform Menu</th>
<th></th>
</tr>

**Note:** This screen depends on your system configuration and may look different than the one shown.

8 Place the cursor on the hardware item you want to add to the configuration file. Use the ↑ up arrow and ↓ down arrow keys to move through the screen.
9 Press ENTER.

10 If the system displays the following message:
   Enter quantity to add (X max in multiples of 1):
   Enter the quantity of this hardware item you want to install in your system.
   If the system does not display this message, continue with step 11.

11 If the system displays the following message:
   Do you wish to preset hardware options for device XXXX [y|n]?
   Enter n
   If the system does not display this message, continue with step 12.

12 When the system displays the following message:
   1 XXXX device(s) added.
   Press Enter to continue...
   Press ENTER.
   The system displays the Device Menu screen (Figure 122 on page 480).

13 When you are done adding hardware to the configuration press d
A System Configuration

The system displays the following message:

Configuration complete and successful.
Configuration data written to file: /vs/data/confData.

14 View the new configuration file to make sure you have added the correct hardware. See Viewing a Configuration on page 484 for the procedure.

15 Make the necessary adjustments on the installed hardware based on the new configuration.

16 Save the new configuration. See Saving a Configuration on page 482 for the procedure.

17 Enter hconchk

The system displays the following message:

hconchk: The hardware configuration check is complete.

Saving a Configuration

The system configuration should be saved whenever a change has been made. To save the system configuration, do the following:

1 Enter save_config
The system displays the following message:

This program copies the /vs/data/confData file for a given VIS machine to floppy disk. This file represents the configuration of the machine. The floppy must be kept in a safe place. It will be required as input for the /vs/bin/util/configure program in the event of a hardware upgrade to this machine.

Please insert the "CONFIGURATION DATA" floppy for this machine.

Press <Enter> when ready to proceed...

2 Insert the diskette labeled “Configuration Data” into the diskette drive.

3 Press ENTER.

The system displays the following message:

Working.../vs/data/confData
/vs/data/confData saved
UNIX_SV#

4 Remove the diskette labeled “Configuration Data” from the diskette drive.

⚠️ CAUTION:

Be sure you put the diskette in a safe place.
Viewing a Configuration

The show_config command allows you to view:

- Successful configurations
- Unsuccessful configurations
- Dated configurations

To view a successful system configuration, do the following:

1. Enter `show_config`

   The system displays the following message:
   
   Using /vs/data/confData as configuration data input file.
   Output file is ./configuration

2. If the system displays the following message:

   A "./configuration" file already exists
   
   Overwrite? [y|n]

   Enter `y`
3 The system displays the following message:
   Configuration has been written to the "./configuration"

4 Enter `vi ./configuration`
   The system displays the System Configuration Table screen
   (Figure 123 on page 486).
### System Configuration Table

#### PLATFORM

**MAP/40P**
Description: MAP/40P platform w/ PCI backplane and P5200 CPU
Backplane: PCI
CPU: P5200

#### DEVICES

**Device Name:** VIDEO_CONTROLLER
**Device Description:** [S]VGA Video Card

<table>
<thead>
<tr>
<th>LOCATION</th>
<th>TDM?</th>
<th>INTR</th>
<th>IOADDR</th>
<th>RAMADDR</th>
<th>DMA</th>
<th>PORT</th>
<th>SCSI ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>PCI 2</td>
<td></td>
<td></td>
<td>3b0</td>
<td>a0000</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Device Name:** RMB_M
**Device Description:** Remote Maintenance Board with modem interface

<table>
<thead>

<td></td>
</tr>
</tbody>
</table>
To view an unsuccessful system configuration, do the following:

1. Enter `show_config fail`
   The system displays the following message:
   
   Using /vs/data/fail_data as configuration data input file.
   Output file is ./failed_config
   Configuration has been written to the "./failed_config"

2. Enter `vi ./failed_config`
   The system displays a System Configuration Table screen similar to the one shown in Figure 123 on page 486. Asterisks (*) next to any field value indicate an unresolved resource conflict.

3. Use the ▲ up arrow and ▼ down arrow keys to move through the screen.

Viewing a Dated Configuration

- Show a dated configuration

You can also use `show_config` to view a previous configuration file saved by the configure program. To do this, type the command with a file name argument (for example, `show_config /vs/data/conf_MMDDYY`). This command line expands the contents of the conf_MMDDYY file (if it exists)
and prints its output to the screen. The program prompts you for an output file name so as to specify the output to this file rather than to the .configuration file.

To view a dated system configuration, do the following:

1. Enter `show_config /vs/data/conf_MMDDYY`
   
   Where `MMDDYY` is the month, day, and year of the configuration you want to view.
   
   The system displays the following message:
   
   Using /vs/data/conf_MMDDYY as configuration data input file.
   
   Please specify full path name of output file for this configuration:

2. Enter `pathname/fn`
   
   where `pathname` is the file location and `fn` is the filename.
   
   The system displays the following message:
   
   Configuration has been written to the "pathname/fn" file.

3. Enter `vi pathname/fn`
   
   where `pathname` is the file location and `fn` is the filename from step 2.
   
   The system displays a System Configuration Table screen similar to the one shown in Figure 123 on page 486.
Comparing a Configuration

The hardware configuration checker verifies that the device configuration information associated with the hardware resource allocator is consistent with the actual system device configuration. To verify the configuration, do the following:

1. Enter `hconchk`

   The system displays the following message:
   
   hconchk: The hardware configuration check is complete.

   If you receive any other error message or warning see “Alarm and Log Messages,” in the *Intuity CONVERSANT System Reference*, 585-313-205.

Presetting Hardware Resources

The preset option allows you to preset the resources used for a particular card. This makes the card compatible and interchangeable with any of your application setups. The purpose of this option is to give you the flexibility to use your hardware with more than one application. You may want to preset...
certain resources of a single new device being selected for a configuration (for example, to force the configure program to select interrupt 6 for a particular device being specified).

If you have preset hardware resources, the Intuity CONVERSANT Hardware Resource Allocator makes one attempt at configuration. If this attempt is successful, the program terminates normally. A second attempt is not performed.

Use the following procedure to preset resources:

1. When you specify a single device, the system displays the following prompt:
   
   Do you wish to preset any hardware options of <device name>?
   [y] [n]

2. Press y

   The system asks you to select a value for the following parameters (where applicable):
   - IRQ
   - I/O address
   - RAM address
   - DMA address
When you have entered all applicable presets, the system displays the following message:

Press Enter to continue...

3 Press ENTER.

The system displays the following message:

1 XXX device(s) added.

Press Enter to continue...

4 Press ENTER.

The system displays the Device Menu screen (Figure 122 on page 480).

5 Enter hconchk

The system displays the following message:

hconchk: The hardware configuration check is complete.
Configuration Device Data

The `deviceData` file stores the devices and the attributes for creating a configuration. The `show_devices` command displays and prints to a file all devices and their attributes as represented in the `deviceData` file.

⚠️ CAUTION:
Do not alter this file.

The `show_devices` Command

The `show_devices` command uncompresses the database of devices and their attributes contained in the `deviceData` file and displays the information on the screen. At the same time, it creates a `.devices` file so that you can send this information to a printer.

If a `.devices` file already exists, you are prompted as to whether it is acceptable to overwrite the existing file.
Overview

This appendix provides the ordering numbers for replacement components used in the MAP/40P.
Component Ordering Numbers

Table 24 on page 494 contains a list of component ordering numbers.

How to Build a System Using This Book

Overview

This appendix provides the sequence of operations for building an Intuity CONVERSANT system.
Checklist for Building a System

The following checklist (Table 25 on page 510) assumes that you are starting with a MAP/40P shell which has only the power supply and the 12-slot backplane.

If your system does not have a power supply or a 12-slot backplane included, see Chapter 4, Replacing Other Components, for the installation procedures.

Disaster Recovery Checklists

The following checklists are included in this section:

- Checklist for Software Reloading on Nonmirrored Intuity CONVERSANT Systems with Existing Hard Disk Drives on page 513
- Checklist for Intuity CONVERSANT Systems with All New Hard Disk Drives on page 514
- Checklist for Nonmirrored Intuity CONVERSANT Systems with a New Hard Disk Drive 0 and an Existing Hard Disk Drive 1 on page 516
- Checklist for Nonmirrored Intuity CONVERSANT Systems with an Existing Hard Disk Drive 0 and a New Hard Disk Drive 1 on page 517
- Checklist for Mirrored Intuity CONVERSANT Systems with a New Hard Disk Drive 0 and an Existing Hard Disk Drive 1 on page 519
- Checklist for Mirrored Intuity CONVERSANT Systems with an Existing Hard Disk Drive 0 and a New Hard Disk Drive 1 on page 521
Checklist for Software Reloading on Nonmirrored Intuity CONVERSANT Systems with Existing Hard Disk Drives

The procedures in Table 26 on page 513 should be conducted when your Intuity CONVERSANT system experiences a software disaster. This checklist should not be used if hard disk drives are being replaced.

---

**Checklist for Intuity CONVERSANT Systems with All New Hard Disk Drives**

The procedures in this checklist (Table 27 on page 515) should be conducted when you are replacing both hard disk drives on your Intuity CONVERSANT system. There are no provisions in this checklist for recovering existing file system. As a result, this checklist should not be used if either hard disk drive has been previously used in your Intuity CONVERSANT system.

</tbody>
</table>
**Numerics**

**23B+D**
23 bearer (communication) and 1 data (signaling) channel on a T1 PRI circuit card.

**30B+D**
30 bearer (communication) and 1 data (signaling) channel (plus framing channel 0) on an E1 PRI circuit card.

**3270 interface**
A link between one or more Intuity CONVERSANT machines and a host mainframe. In Intuity CONVERSANT system documentation, the 3270 interface specifically means the link between one or more system machines and an IBM host mainframe.

**47B+D**
47 bearer (communication) and 1 data (signaling) channel on two T1 PRI circuit cards.
4ESS®

A large Lucent central office switch used to route calls through the telephone network.

A

AC
alternating current

ACD
automatic call distributor

AD
application dispatch

AD-API
application dispatch application programming interface

adaptive differential pulse code modulation
A means of encoding analog voice signals into digital signals by adaptively predicting future encoded voice signals. This adaptive modulation method reduces the number of bits required to encode voice. See also "pulse code modulation."
adjunct products

Products (for example, the Adjunct/Switch Application Interface) that the Intuity system administers via cut-through access to the inherent management capabilities of the product itself; this is in opposition to the ability of the Intuity CONVERSANT system to administer the switch directly.

**Adjunct/Switch Application Interface**

An optional feature package that provides an Integrated Services Digital Network-based interface between Lucent Technologies PBXs and adjunct processors.

**ADPCM**

*adaptive differential pulse code modulation*

**ADU**

*asynchronous data unit*

**advanced speech recognition**

A speech recognition ability that allows the system to understand WholeWord and FlexWord™ inputs from callers.

**affiliate**

A business organization that Lucent controls or with which Lucent is in partnership.
AGL

application generation language

alarm relay unit

A unit used in central office telecommunication arrangements that transmits warning indicators from telephone communications equipment (such as an Intuity CONVERSANT system) to audio.

ALERT

System alerter process

alerter

A system process that responds to patterns of events logged by the “logdaemon” process.

American Standard Code for Information Interchange

A standard code for data representation that represents alphanumeric characters as binary numbers. The code includes 128 upper- and lowercase letters, numerals, and special characters. Each alphanumeric and special character has an ASCII code (binary) equivalent that is 1 byte long.
**analog**

An analog signal, such as voice or music, that varies in a continuous manner. An analog signal may be contrasted with a digital signal, which represents only discrete states.

**ANI**

*automatic number identification*

**announcement**

A message the system plays to the caller to provide information. The caller is not asked to give a response. Compare to “prompt.”

**API**

Application programming interface

**application**

The automated transaction (interactions) among the caller, the voice response system, and any databases or host computers required for your business. See also “application script.”
application administration
The component of the Intuity CONVERSANT system that provides access to the applications currently available on your system and helps you to manage and administer them.

application installation
A two-step process in which the Intuity CONVERSANT system invokes the TSM script assembler for the specific application name and moves files to the appropriate directories.

application script
The computer program that controls the application (the transaction between the caller and the system). The Intuity CONVERSANT system provides several methods for creating application scripts, including Voice@Work, Script Builder, Transaction Assembler Script (TAS) language, and the Intuity Response Application Programming Interface (IRAPI).

application verification
A process in which the Intuity CONVERSANT system verifies that all the components needed by an application are complete.

ASCII
American Standard Code for Information Interchange
ASI
analog switch integration

ASR
advanced speech recognition

asynchronous communication
A method of data transmission in which bits or characters are sent at irregular intervals and spaced by start and stop bits rather than by time. Compare to "synchronous communication."

asynchronous data unit
An electronic communications device that allows computer systems to communicate over asynchronous lines more than 50 feet (15 m) in length.

automatic call distributor
That part of a telephone system that recognizes and answers incoming calls and completes these calls based on a set of instructions contained in a database. The ACD can send the call to an operator or group of operators as soon as the operator has completed a previous call or after the system has played a message to the caller.
automatic number identification

A method of identifying the calling party by automatically receiving a string of digits that identifies the calling station of a particular customer.

AYC5B
The IVP6 Tip/Ring (analog) circuit card.

AYC10
The IVC6 Tip/Ring (analog) circuit card.

AYC21
The E1/T1 (digital) circuit card.

AYC30
The NGTR (analog) circuit card.

AYC43
The speech and signal processor (SSP) circuit card.
back up

The preservation of the information in a file in a different location, so that the data is not lost in the event of hardware or system failure.

backing up an application

Using a utility that makes an archive copy of a completed application or an interim copy of an application in progress. The back-up copy can be restored to the system if the on-line version is damaged, or if you make revisions and want to go back to the previous version.

barge-in

A capability provided by WholeWord speech recognition and Dial Pulse Recognition (DPR) that allows callers to speak or enter their responses during the prompt and have those responses recognized (similar to the Speak with Interrupt capability). See also “echo cancellation.”

batch file

A file containing one or more lines, each of which is a command executable by the UNIX shell.

BB

bulletin board
**binary synchronous communications**
A character-oriented synchronous link protocol.

**blind transfer protocol**
A protocol in which a call is completed as soon as the extension is dialed, without having to wait to see if the telephone is busy or if the caller answered.

**bps**
bits per second

**BRDG**
call bridging process

**bridging**
The process of connecting one telephone network connection to another over the Intuity CONVERSANT system TDM bus. Bridging decreases the processing load on the system since an active bridge does not require speech processing, database access, host activity, etc., for the transaction.

**BSC**
**binary synchronous communications**
**bundle**

In the context of the Enhanced File Transfer package, this term is used to denote a single file, a group of files (package), or a combination of both.

**byte**

A unit of storage in the computer. On many systems, a byte is 8 bits (binary digits), which is the equivalent of one character of text.

**call classification analysis**

A process that enables application designers to use information available within the system to classify the disposition of originated and transferred calls. Intelligent CCA is provided with the system. Full CCA is an optional feature package.

**call data event**

A parameter that specifies a list of variables that are appended to a call data record at the end of each call.

**call data handler process**

A software process that accumulates generic call statistics and application events.
called party number
The number dialed by the person making a telephone call. Telephone switching equipment can use this number to selectively route an incoming call to a particular department or agent.

caller
The party who calls for a service, gets connected to the Intuity CONVERSANT system, and interacts with it. As the Intuity CONVERSANT system can also make outbound calls for service, the caller can also be the person who responds to those outbound calls.

call flow
See "transaction."

call progress tones
Standard telephony sounds that indicate the status of the call. These sounds include busy, fast busy, ringback, reorder, etc.

card cage
An area within a Intuity CONVERSANT system platform that contains and secures all of the standard and optional circuit cards used in the system.
cartridge tape drive
A high-capacity data storage/retrieval device that can be used to transfer large amounts of information onto high-density magnetic cartridge tape based on a predetermined format. This tape can be removed from the system and stored as a backup, or used on another system.

CAS
channel associated signalling

caution
An admonishment or advisory statement used in Intuity CONVERSANT system documentation to alert the user to the possibility of a service interruption or a loss of data.

CCA
call classification analysis

CDH
call data handler process

CELP
code excited linear prediction
central office

An office or location in which large telecommunication devices such as telephone switches and network access facilities are maintained. These locations follow strict installation and operation requirements.

central processing unit

See “processor.”

CGEN

Voice system general message class

channel

See “port.”

channel associated signaling

A type of signaling that can be used on E1 circuit cards. It occurs on channel 16.

CICS

Customer Information Control System
circuit card upgrade
A new circuit card that replaces an existing card in the platform. Usually the replacement is an updated version of the original circuit card to replace technology made obsolete by industry trends or a new system release.

cluster controller
A bisynchronous interface that provides a means of handling remote communication processing.

CMS
Call Management System

CO
central office

code excited linear prediction
A means of encoding analog voice signals into digital signals that provides excellent quality with use of minimum disk space.
command
An instruction or request the user issues to the system software to make the system perform a particular function. An entire command consists of the command name and options.

configuration
The arrangement of the software and hardware of a computer system or network. The Intuity CONVERSANT system configuration includes either a standard or custom processor, peripheral equipment (for example, printers and modems), and software applications. Configuration also refers to the way the switch network is set up; that is, the types of products that are in the network and how those products communicate.

configuration management
The component of the system that allows you to manage the current configuration of voice channels, host sessions, and database connections, assign scripts to run on specific voice channels or host sessions, assign functionality to SSP and E1/T1 circuit cards, and perform various maintenance functions.

connect and disconnect (C and D) tones
DTMF tones that inform the system when the attendant has been connected (C) and when the caller has been disconnected (D).
connected digits
A sequence of digits that the system can process as a group, rather than requiring the caller to enter the digits one at a time.

Converse Data Return (conv_data)
A Script Builder action that supports the DEFINITY® call vectoring (routing) feature by enabling the switch to retain control of vector processing in the system environment. It supports the DEFINITY “converse” vector command to establish a two-way routing mechanism between the switch and the system to facilitate data passing and return.

collector circuit card
A circuit card used on a computer system that controls its basic functionality and makes the system operational. These circuit cards are used to control magnetic peripherals, video monitors, and basic system communications.

copying an application
A utility in which information from a source application is directed into the destination application.
**coresidency**

The ability of two products or services to operate and interact with each other on a single hardware platform. An example of this is the use of an Intuity CONVERSANT system along with a package from a different vendor on the same system platform.

**CPE**

customer provided equipment or customer premise equipment

**CPN**

called party number

**CPT**

call progress tones

**CPU**

central processing unit

**crash**

An interactive utility for examining the operating system core and for determining if system parameters are being exceeded.
CSU
channel service unit

custom speech
Unique words or phrases to be used in Intuity CONVERSANT system voice prompts that Lucent Technologies custom records on a per-customer basis.

custom vocabulary
A specialized package of unique words or phrases created on a per-customer basis and used by WholeWord or FlexWord speech recognition.

Customer Information Control System
Part of the operating system that manages resources for running applications (for example, IND$FILE). Note that TSO and CMS provide analogous functionality in other host environments.

CVS
converse vector step
danger
An admonishment or advisory statement used in Intuity CONVERSANT system documentation to alert the user to the possibility of personal injury or death.

data interface process
A software process that communicates with Script Builder applications.

database
A structured set of files, records, or tables.

database field
A field used to extract values from a local database and form the structure upon which a database is built.

database record
The information in a database for a person, product, event, etc. The database record is made up of individual fields for each information item.
database table

A structure, made up of columns and rows, that holds information in a database. Database tables provide a means of storing information that changes too often to "hard-code," or store permanently, in the transaction outline.

dB
decibel

DB
database

DBC
database checking process

DBMS
database management system

DC
direct current

DCE
data communications equipment
**DCP**

digital communications protocol

**debug**

The process of locating and correcting errors in computer programs; also referred to as “troubleshooting.”

**default**

The way a computer performs a task in the absence of other instructions.

**default owner**

The owner of a channel when no process takes ownership of that channel. The default owner holds all idle, in-service channels. In terms of the IRAPI, this is typically the Application Dispatch process.

**diagnose**

The process of performing diagnostics on a bus or on Tip/Ring, E1/T1, or SSP circuit cards.

**dial ahead**

The ability to collect and process touch-tone inputs in sequence, even when they are received before the prompts.
dial pulse recognition
   A method of recognizing caller pulse inputs from a rotary telephone.

dialed number identification service
   A service that allows incoming calls to contain information about the telephone number for which it is destined.

dial through
   A capability provided by touch-tone and dial pulse recognition that allows callers to enter their responses during the prompt and have those responses recognized (similar to the Speak with Interrupt capability). See also “barge-in” and “echo cancellation”.

dictionary
   A reference book containing an alphabetical list of words, with information given for each word including meaning, pronunciation, and etymology.

DIMM
   dual in-line memory module

DIO
   disk input and output process
DIP

data interface process

directory
A type of file used to group and organize other files or directories.

display errdata
A command that displays system errors sent to the logger.

DMA
direct memory address

DNIS
dialed number identification service

DPR
dial pulse recognition

DSP
digital signal processor
DTE

data terminal equipment

DTMF

dual tone multi-frequency

DTR

data terminal ready

dual 3270 links

A feature that provides an additional physical unit (PU) for a cost-effective means of connecting to two host computers. The customer can connect a system to two separate FEPs or to a single FEP shared by one or more host computers. Each link supports a maximum of 32 LUs.

dual tone multi-frequency

A touch-tone sound that is an audio signal including two different frequencies. DTMF feedback is the process of the “switch” providing this information to the system. DTMF muting is the process of ignoring these tones (which might be simulated by human speech) when they are not needed for the application.
**dump space**

An area of the disk that is fixed in size and should equal the amount of RAM on the system. The operating system “dumps” an image of core memory when the system crashes. The dump can be fetched after rebooting to help in analyzing the cause of the crash.

**E**

**E&M**

*Ear and Mouth*

**E1 / T1**

Digital telephony interfaces, commonly called trunks. E1 is an international standard at 2.048 Mbps. T1 is a North American standard at 1.544 Mbps.

*Ear and Mouth*

A common T1 trunking protocol for connection between two “switches.”

**EBCDIC**

Extended Binary Coded Decimal Interexchange Code
**echo cancellation**
The process of making the channel quiet enough so that the system can hear and recognize WholeWord and dial pulse inputs during the prompt. See also “barge-in.”

**ECS**
Enterprise Communications Server

**editor system**
A system that allows speech phrases to be displayed and edited by a user. See “Graphical Speech Editor.”

**EFT**
Enhanced File Transfer

**EIA**
Electronic Industries Association

**EISA**
Extended Industry Standard Architecture

**EMI**
electromagnetic interference
**enhanced basic speech**
Pre-recorded speech available from Lucent Technologies in several languages. Sometimes called “standard speech.”

**Enhanced File Transfer**
A feature that allows the transferring of files automatically between the Intuity CONVERSANT system and a synchronous host processor on a designated logical unit.

**Enhanced Serial Data Interface**
A software- and hardware-controlled method used to store data on magnetic peripherals.

**Enterprise Communications Server**
The telephony equipment that connects your business to the telephone network. Sometimes called a “switch.”

**error message**
A message on the screen indicating that something is wrong with a possible suggestion of how to correct it.
**Glossary**

EXTA

external alarms feature message class

external actions

Specific predefined system tasks that Script Builder can call or *invoke* to interact with other products or services. When an external action is invoked, the system displays a form that provides choices in each field for the application developer to select. Examples are Call_Bridge, Make_Call, SP_Allocate, SR_Prompt, etc. In Voice@Work, external actions are treated as "external functions."

external functions

Specific predefined (or customer-created) system tasks that Voice@Work or Script Builder can call or *invoke* to interact with other products or services. The function allows the application developer to enter the argument(s) for the function to act on. Examples are concat, getarg, length, substring, etc. See also "external actions."

FAX Actions

An optional feature package that allows the system to send fax messages.
**Glossary**

**FCC**
Federal Communications Commission

**FDD**
floppy disk drive

**feature**
A function or capability of a product or an application within the Intuity CONVERSANT system.

**feature package**
An optional package that may contain both hardware and software resources to provide additional functionality to a standard system.

**feature_tst script package**
A standard Intuity CONVERSANT system software program that allows a user to perform self-tests of critical hardware and software functionality.

**FEP**
front end processor
FFE
Form Filler Plus feature message class

field
See “database field.”

FIFO
first-in-first-out processing order

file
A collection of data treated as a basic unit of storage.

file transfer
An option that allows you to transfer files interactively or directly to and from UNIX using the file transfer system (FTS).

filename
Alphabetic characters used to identify a particular file.

FlexWord™ speech recognition
A type of speech recognition based on subword technology that recognizes phonemes or parts of words in a specific language. See also “subword technology.”
Glossary

**foos**
facility out-of-service state

**Form Filler Plus**
An optional feature package that provides the capability for application scripts to record a caller’s responses to prompts for later transcription and review.

**FTS**
file transfer process message class

**Full CCA**
A feature package that augments the types of call dispositions that Intelligent CCA can provide.

**function key**
A key, labeled F1 through F8, on your keyboard to which the Intuity CONVERSANT system software gives special properties for manipulating the user interface.

**GEN**
PRISM logger and alerter general message class
Grammar

The inputs that a recognizer can match (identify) from a caller.

Graphical Speech Editor

A window-driven, X Windows/Motif based, graphical user interface (GUI) that can be accessed to perform different functions associated with the creation and editing of speech files for applications. The editing is done on the Intuity CONVERSANT™ system.

GSE

Graphical Speech Editor

GUI

graphical user interface

Hard disk drive

A high-capacity data storage/retrieval device that is located inside a computer platform. A hard disk drive stores data on nonremovable high-density magnetic media based on a predetermined format for retrieval by the system at a later date.
hardware
The physical components of a computer system. The central processing unit, disks, tape, and floppy drives, etc., are all hardware.

Hardware Resource Allocator
A software program that resolves or blocks the allocation of CPU and memory resources for controlling and optional circuit cards.

hardware upgrade
Replacement of one or more fundamental platform hardware components (for example, the CPU or hard disk drive), while the existing platform and other existing optional circuit cards remain.

HDD
hard disk drive

High Level Language Applications Programming Interface
An application programming interface that allows a user to write custom applications that can communicate with a host computer via an API.

HLLAPI
High Level Language Applications Programming Interface
**HOST**

host interface process message class

**host computer**

A computer linked to a network to provide a range of services, such as database access and computation. The host computer operates in a time-sharing manner with other computers linked to it via the network.

**hwoos**

hardware out-of-service state

**Hz**

Hertz

**IBM**

International Business Machines

**iCk or ICK**

The system integrity checking process.
**ID**
identification

**IDE**
integrated disk electronics

**idle channel**
A channel that either has no owner or is owned by its default owner and is onhook.

**IE**
information element

**IND$FILE**
The standard SNA file transfer utility that runs as an application under CICS, TSO, and CMS. IND$FILE is independent of link-level protocols such as BISYNC and SDLC.

**independent software vendor**
A company that has an agreement with Lucent Technologies to develop software to work with the Intuity CONVERSANT system to provide additional features required by customers.
indexed table

A table that, unlike a nonindexed table, can be searched via a field name that has been indexed.

industry standard architecture

A PC bus standard that allows processors and other circuit cards to communicate with each other.

INIT

voice system initialization message class

initialize

To start up the system for the first time.

inserv

in-service state

Integrated Services Digital Network

A network that provides end-to-end digital connectivity to support a wide range of voice and data services.
**Glossary**

**Integrated Voice Processing (IVP) circuit card**

The IVP6 circuit card that provides Tip/Ring connections. The NGTR (AYC30) card also provides the same functions.

**intelligent CCA**

Monitoring the line after dialing is complete to determine whether a busy, reorder (fast busy), or other failure has been encountered. It also recognizes when the extension is answered or if the extension is not answered after a specified number of rings. The monitoring capabilities are dependent on the network interface circuit card and protocol used.

**interface**

The access point of a system. With respect to the Intuity CONVERSANT system, the interface is designed to provide you with easy access to the software capabilities.

**interrupt**

The termination of voice and/or telephony functions when some condition occurs.

**Intuity Response Application Programming Interface**

A library of commands that provide a standard development interface for voice-telephony applications.
Glossary

IPC
interprocess communication

IPC
intelligent ports card (IPC-900)

IPCI
integrated personal computer interface

IRAPI
Intuity Response Application Programming Interface

IRQ
interrupt request

ISA
industry standard architecture

ISDN
Integrated Services Digital Network
ISV

independent software vendor

ITAC

International Technical Assistance Center

IVC6 circuit card (AYC10)

A Tip/Ring (analog) circuit card with six channels.

IVP6 circuit card (AYC5B)

A Tip/Ring (analog) card with six channels.

Kbps

kilobytes per second

Kbyte

kilobyte
keyboard mapping
In emulation mode, this feature enables the keyboard to send 3270 keyboard codes to the host according to a configuration table set up during installation.

keyword spotting
A capability provided by WholeWord speech recognition that allows the system to recognize a single word in the middle of an entire phrase spoken by a caller in response to a prompt.

LAN
local area network

LDB
local database

LED
light-emitting diode

library states
The state information about channel activities maintained by the IRAPI.
LIFO
last-in-first-out processing order

line side E1
A digital method of interfacing an Intuity CONVERSANT system to a PBX or “switch” using E1-related hardware and software.

line side T1
A digital method of interfacing an Intuity CONVERSANT system to a PBX or “switch” using T1-related hardware and software.

listfile
An ASCII catalog that lists the contents of one or more talkfiles. Each application script is typically associated with a separate listfile. The listfile maps speech phrase strings used by application scripts into speech phrase numbers.

local area network
A data communications network in a limited geographical area. The LAN provides communications between computers and peripherals.

local database
A database residing on the Intuity CONVERSANT system.
LOG

Intuity CONVERSANT system logger process message class

logical unit

A type of SNA Network Addressable Unit.

logdaemon

A UNIX system information and error logging process.

logger

See “logdaemon.”

logging on/off

Entering or exiting the Intuity CONVERSANT system software.

LSE1

line side E1

LST1

line side T1
LU

**logical unit**

**magnetic peripherals**
Data storage devices that use magnetic media to store information. Such devices include hard disk drives, floppy disk drives, and cartridge tape drives.

**main screen**
The Intuity CONVERSANT system screen from which you are able to enter either the System Administration or Voice System Administration menu.

**maintenance process**
A software process that runs temporary diagnostics and maintains the state of circuit cards and channels.

**manoos**
manually out-of-service state

**MAP/100P**
multi application platform 100P
Glossary

**MAP/100C**
multi application platform 100C

**MAP/40P**
multi application platform 40P

**MAP/5P**
multi application platform 5P

**masked event**
An event that an application can ignore (that is, the application can request not to be informed of the event).

**master**
A circuit card that provides clock information to the TDM bus.

**Mbps**
megabits per second

**MByte**
megabyte
megabyte
A unit of memory equal to 1,048,576 bytes (1024 x 1024). It is often rounded to one million.

menu
Options presented to a user on a computer screen or with voice prompts.

MF
multifrequency

MHz
megahertz

Microsoft
A manufacturer of software products, primarily for IBM-compatible computers.

mirroring
A method of data backup that allows all of the data transactions to the primary hard disk drive to be copied and maintained on a second identical drive in near real time. If the primary disk drive crashes or becomes disabled, all of the data stored on it (up to 1.2 billion bytes of information) is accessible on the second mirrored disk drive.
ms
millisecond

msec
millisecond

MS-DOS
A personal computer disk operating system developed by the Microsoft Corporation.

MTC
maintenance process

multifrequency
Dual tone digit signalling (similar to DTMF), used for trunk addressing between network switches or by network operators.

multithreaded application
A single process/application that controls several channels. Each thread of the application is managed explicitly. Typically this means state information for each thread is maintained and the state of the application on each channel is tracked.
NCP
Network Control Program

NEBS
Network Equipment Building Standards

NEMA
National Electrical Manufacturers Association

netoos
network out-of-service state

NetView
An optional feature package that transmits high-priority (major or critical) messages to the host as operator-generated alerts (OGAs) over the 3270 host link. The NetView Alarm feature package does not require a dedicated LU.

next generation Tip/Ring (AYC30) circuit card
An analog circuit card with six channels.
NFAS
non-facility associated signalling

NFS
network file sharing

NGTR
next generation Tip/Ring (AYC30) circuit card

NM-API
Network Management - Application Programming Interface

NMVT
network management vector transport

nonex
nonexistent state

nonindexed table
A table that can be searched only in a sequential manner and not via a field name.
**Glossary**

**nonmasked event**
An event that must be sent to the application. Generally, an event is nonmaskable if the application would likely encounter state transition errors by trying to it.

**NRZ**
non return to zero

**NRZI**
non return to zero inverted

**null value**
An entry containing no value. A field containing a null value is normally displayed as blank and is different from a field containing a value of zero.

**obsolete hardware**
Hardware that is no longer supported on the Intuity CONVERSANT system.

**OEM**
original equipment manufacturer
OGA

operator-generated alert

on-line help
Messages or information that appear on the user’s screen when a “function key” (F1 through F8) is pressed.

operator-generated alert
A system-monitoring message that is transmitted from the Intuity CONVERSANT system or other computer system to an IBM host computer and is classified as critical or major.

option
An argument used in a command line to modify program output by modifying the execution of a command. When you do not specify any options, the command executes according to its default options.

ORACLE
A company that produces relational database management software. It is also used as a generic term that identifies a database residing on a local or remote system that is created and maintained using an ORACLE RDBMS product.
P

P&C
Prompt and Collect Script Builder action step

PBX
private branch exchange

PC
personal computer

PCB
printed circuit board

PCI
peripheral component interconnect

PCM
pulse code modulation

PEC
price element code
<table>
<thead>
<tr>
<th>Glossary</th>
<th>peripheral (device)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>peripheral (device)</strong></td>
<td>Equipment such as printers or terminals that is in addition to the basic processor.</td>
</tr>
<tr>
<td><strong>peripheral component interconnect</strong></td>
<td>A newer, higher speed PC bus that is gradually displacing ISA for many components.</td>
</tr>
<tr>
<td><strong>permanent process</strong></td>
<td>A process that starts and initializes itself before it is needed by a caller.</td>
</tr>
<tr>
<td><strong>phoneme</strong></td>
<td>A single basic sound of a particular spoken language. For example, the English language contains 40 phonemes that represent all basic sounds used with the language. The English word “one” can be represented with three phonemes, “w” - “uh” - “n.” Phonemes vary between languages because of guttural and nasal inflections and syllable constructs.</td>
</tr>
<tr>
<td><strong>phrase filtering (screening)</strong></td>
<td>The rejection of unrecognized speech. The WholeWord and FlexWord speech recognition packages can be programmed to reprompt the caller if the Intuity CONVERSANT system does not recognize a spoken response.</td>
</tr>
</tbody>
</table>
**phrase tag**
A string of up to 50 characters that identifies the contents of a speech phrase used by an application script.

**platform migration**
See “platform upgrade.”

**platform upgrade**
The process of replacing the existing platform with a new platform.

**pluggable**
A term usually used with speech technologies, in particular standard speech, to indicate that a basic algorithmic technique has been implemented to accept one or more sets of parameters that tailors the algorithm to perform in one or more languages.

**poll**
A message sent from a central controller to an individual station on a multipoint network inviting that station to send if it has any traffic.
polling
A network arrangement whereby a central computer asks each remote location
whether it wants to send information. This arrangement enables each user or remote
data terminal to transmit and receive information on shared facilities.

port
A connection or link between two devices that allows information to travel to a
desired location. See “telephone network connection.”

PRI
Primary Rate Interface

Primary Rate Interface
An ISDN term for connections over E1 or T1 facilities that are usually treated as
trunks.

private branch exchange
A private switching system, either manual or automatic, usually serving an
organization, such as a business or government agency, and usually located on the
customer’s premises.
**processor**

In Intuity CONVERSANT system documentation, the computer on which UnixWare and Intuity CONVERSANT system software runs. In general, the part of the computer system that processes the data. Also known as the "central processing unit."

**prompt**

A message played to a caller that gives the caller a choice of selections in a menu and asks for a response. Compare to "announcement."

**prompt and collect (P and C)**

A message played to a caller that gives the caller a choice of selections in a menu and asks for a response. The responses is collected and the script progresses based on the caller’s response.

**pseudo driver**

A driver that does not control any hardware.

**PS&BM**

power supply and battery module
PSTN
public switch telephone network

pulse code modulation
A digital modulation method of encoding voice signals into digital signals. See also “adaptive differential pulse code modulation.”

RAID
redundant array of independent disks

RAID array
An assembly of disk drives configured to provide some level of RAID functionality.

RAM
random access memory

RDMBS
ORACLE relational database management system
RECOG

speech recognition feature message class

recognition type

The type of input the recognizer can understand. Available types include touch-tone, dial pulse, and Advanced Speech Recognition (ASR), which includes WholeWord and FlexWord speech recognition.

recognizer

The part of the system that compares caller input to a grammar in order to correctly match (identify) the caller input.

record

See “database record.”

recovery

The process of using copies of the Intuity CONVERSANT system software to reconstruct files that have been lost or damaged. See also “restore.”

remote database

Information stored on a system other than the Intuity CONVERSANT system that can be accessed by the Intuity CONVERSANT system.
remote maintenance circuit card

An Intuity CONVERSANT system circuit card, available with a built-in modem, that allows remote personnel (for example, field support) to access all Intuity CONVERSANT system machines. This card is standard equipment on all new MAP/100, MAP/40, and MAP/5P purchases.

REN

ringer equivalence number

reports administration

The component of Intuity CONVERSANT system that provides access to system reports, including call classification, call data detail, call data summary, message log, and traffic reports.

restore

The process of recovering lost or damaged files by retrieving them from available back-up tapes or from another disk device. See also “recovery.”

restore application

A utility that replaces a damaged application or restores an older version of an application.
**reuse**

The concept of using a component from a source system in a target system after a software upgrade or platform migration.

**RFS**

remote file sharing

**RM**

resource manager

**RMB**

remote maintenance circuit card

**rollback**

To cancel changes to a database since the point at which changes were last committed.

**rollback segment**

A portion of the database that records actions that should be undone under certain circumstances. Rollback segments are used to provide transaction rollback, read consistency, and recovery.
Glossary

**RTS**
request to send

**SBC**
sub-band coding

**screen pop**
A method of delivering a screen of information to a telephone operator at the same time a telephone call is delivered. This is accomplished by a complex chain of tasks that include identifying the calling party number, using that information to access a local or remote ORACLE database, and pulling a “form” full of information from the database using an ORACLE database utility package.

**script**
The set of instructions for the Intuity CONVERSANT system to follow during a transaction.
Script Builder

An optional software package that provides a menu-oriented interface designed to assist in the development of custom voice response applications on the Intuity CONVERSANT system (see also "Voice@Work").

SCSI

small computer system interface

SDLC

synchronous data link control

SDN

software defined network

shared database table

A database table that is used in more than one application.

shared speech

Speech that is a part of more than one application.
shared speech pools
A parameter that allows the user of a voice application to share speech components with other applications.

SID
station identification

signal processor circuit card (AYC2, AYC2B, AYC2C, or AYC9d)
A speech processing circuit card that is an older, lower-capacity version of the speech and signal processor (SSP) circuit card (AYC43).

SIMMs
single inline memory modules

single inline memory modules
A method of containing random access memory (RAM) chips on narrow circuit card strips that attach directly to sockets on the CPU circuit card. Multiple SIMMs are sometimes installed on a single CPU circuit card.

single-threaded application
An application that runs on a single voice channel.
**slave**

A circuit card that depends on the TDM bus for clock information.

**SLIP**

serial line interface protocol

**small computer system interface**

A disk drive control technology in which a single SCSI adapter circuit card plugged into a PC slot is capable of controlling as many as seven different hard disks, optical disks, tape drives, etc.

**SNA**

systems network architecture

**SNMP**

simple network management protocol

**software**

The set or sets of programs that instruct the computer hardware to perform a task or series of tasks — for example, UnixWare software and the Intuity CONVERSANT system software.
**software upgrade**

The installation of a new version of software in which the existing platform and circuit cards are retained.

**source system**

The system from which you are upgrading (that is, your system as it exists before you upgrade).

**speech and signal processor circuit card (AYC43)**

The high-performance signal processing circuit card introduced in V6.0 capable of simultaneous support for various speech technologies.

**speech energy**

The amount of energy in an audio signal. Literally translated, it is the output level of the sound in every phonetic utterance.

**speech envelope**

The linear representation of voltage on a line. It reflects the sound wave amplitude at different intervals of time. This envelope can be plotted on a graph to represent the oscillation of an audio signal between the positive and negative extremes.
speech file
A file containing an encoded speech phrase.

speech filesystem
A collection of several talkfiles. The filesystem is organized into 16-Kbyte blocks for efficient management and retrieval of talkfiles.

speech modeling
The process of creating WholeWord speech recognition algorithms by collecting thousands of different speech samples of a single word and comparing them all to obtain a statistical average of the word. This average is then used by a WholeWord speech recognition program to recognize a single spoken word.

speech space
An area that contains all digitized speech used for playback in the applications loaded on the system.

speech phrase
A continuous speech segment encoded into a digital string.

speech recognition
The ability of the system to understand input from callers.
SPIP
signal processor interface process

SPPLIB
speech processing library

SQL
structured query language

SR
speech recognition

SSP
speech and signal processor circuit card (AYC43)

standard speech
The speech package available in several languages containing simple words and phrases produced by Lucent Technologies for use with the Intuity CONVERSANT system. This package includes digits, numbers, days of the week, and months, each spoken with initial, medial, and falling inflection. The speech is in digitized files stored on the hard disk to be used in voice prompts and messages to the caller. This feature is also called enhanced basic speech.
**standard vocabulary**

A standard package of simple word speech models provided by Lucent Technologies and used for WholeWord speech recognition. These phrases include the digits “zero” through “nine,” “yes,” “no,” and “oh,” or the equivalent words in a specific local language.

**string**

A contiguous sequence of characters treated as a unit. Strings are normally bounded by white spaces, tabs, or a character designated as a separator. A string value is a specified group of characters symbolized by a variable.

**structured query language**

A standard data programming language used with data storage and data query applications.

**subword technology**

A method of speech recognition used in FlexWord recognition that recognizes phonemes or parts of words. Compare to “WholeWord speech recognition.”

**switch**

A software and hardware device that controls and directs voice and data traffic. A customer-based switch is known as a “private branch exchange.”
switch hook
The device at the top of most telephones that is depressed when the handset is resting in the cradle (in other words, is on hook). The device is raised when the handset is picked up (in other words, when the telephone is off hook).

switch hook flash
A signaling technique in which the signal is originated by momentarily depressing the “switch hook.”

switch interface administration
The component of the Intuity CONVERSANT system that enables you to define the interaction between the Intuity CONVERSANT system and switches by allowing you to establish and modify switch interface parameters and protocol options for both analog and digital interfaces.

switch network
Two or more interconnected telephone switching systems.

synchronous communication
A method of data transmission in which bits or characters are sent at regular time intervals, rather than being spaced by start and stop bits. Compare to “asynchronous communication.”
SYS

UNIX system calls message class

sysgen
system generation

System 75
An advanced digital switch supporting up to 800 lines that provides voice and data communications for its users.

System 85
An advanced digital switch supporting up to 3000 lines that provides voice and data communications for its users.

system administrator
The person assigned the responsibility of monitoring all Intuity CONVERSANT system software processing, performing daily system operations and preventive maintenance, and troubleshooting errors as required.

system architecture
The manner in which the Intuity CONVERSANT system software is structured.
system message
An event or alarm generated by either the Intuity CONVERSANT system or end-user process.

system monitor
A component of the Intuity CONVERSANT system that tests to verify that each incoming telephone line and its associated Tip/Ring or T1 circuit card is functional. Through the “System Monitor” component, you are able to see displays of the Voice Channel and Host Session Monitors.

T1
A digital transmission link with a capacity of 1.544 Mbps.

table
See “database table.”

tag image file format
A format for storing and exchanging digital image data associated with fax modem data transfers and other applications.
talkfile
An ASCII file that contains the speech phrase tags and phrase tag numbers for all the phrases of a specific application. The speech phrases are organized and stored in groups. Each talkfile can contain up to 65,535 phrases, and the speech filesystem can contain multiple talkfiles.

talkoff
The process of a caller interrupting a prompt, so the prompt message stops playing.

target system
The system to which you are upgrading (that is, your system as you expect it to exist after you upgrade).

TAS
transaction assembler script

TCC
Technology Control Center

TCP/IP
transmission control protocol/internet protocol
Glossary

TDM

time division multiplexing

TE

terminal emulator

telephone network connection

The point at which a telephone network connection terminates on an Intuity CONVERSANT system. Supported telephone connections are Tip/Ring, T1, and E1.

terminal emulator

Software that allows a PC or UNIX process to look like a specific type of terminal. In particular, it allows the Intuity CONVERSANT system to temporarily transform itself into a "look alike" of an IBM 3270 terminal. In addition to providing full 3270 functionality, the terminal emulator enables you to transfer files to and from UNIX.

text-to-speech

An optional feature that allows an application to play US English speech directly from ASCII text by converting that text to synthesized speech. The text can be used for prompts or for text retrieved from a database or host, and can be spoken in an application with prerecorded speech. text-to-speech application development is supported through Voice@Work and Script Builder.
**ThickNet**
A 10-mm (10BASE5) coaxial cable used to provide interLAN communications.

**ThinNet**
A 5-mm (10BASE2) coaxial cable used to provide interLAN communications.

**TIFF**
tag image file format

time-division multiplex
A method of serving a number of simultaneous channels over a common transmission path by assigning the transmission path sequentially to the channels, with each assignment being for a discrete time interval.

**Tip/Ring**
Analog telecommunications using four-wire media.

**token ring**
A ring type of local area network that allows any station in the network to communicate with any other station.
**trace**
A command that can be used to monitor the execution of a script.

**traffic**
The flow of information or messages through a communications network for voice, data, or audio services.

**transaction**
The interactions (exchanges) between the caller and the voice response system. A transaction can involve one or more telephone network connections and voice responses from the Intuity CONVERSANT system. It can also involve one or more of the system optional features, such as speech recognition, 3270 host interface, FAX Actions, etc.

**transaction assembler script**
The computer program code that controls the application operating on the voice response system. The code can be produced from Voice@Work, Script Builder, or by writing directly in TAS code.

**transaction state machine process**
A multi-channel IRAPI application that runs applications controlled by TAS script code.
transient process
A process that is created dynamically only when needed.

TRIP
Tip/Ring interface process

troubleshooting
The process of locating and correcting errors in computer programs. This process is also referred to as debugging.

TSO
Technical Services Organization

UNIX Operating System
A multiuser, multitasking computer operating system originally developed by Lucent Technologies.

UNIX shell
The command language that provides a user interface to the UNIX operating system.

upgrade scenario
The particular combination of current hardware, software, application and target hardware, software, applications, etc.
usability
A measurement of how easy an application is for callers to use. The measurement is made by making observations and by asking questions. An application should have high usability to be successful.

USOC
universal service ordering code

UVL
unified voice library

V
VDC
video display controller

vi editor
A screen editor used to create and change electronic files.
virtual channel
A channel that is not associated with an interface to the telephone network (Tip/Ring, T1, LSE1/LST1, or PRI). Virtual channels are intended to run “data-only” applications which do not interact with callers but may interact with DIPs. Voice or network functions (for example, coding or playing speech, call answer, origination, or transfer) will not work on a virtual channel. Virtual channel applications can be initiated only by a “virtual seizure” request to TSM from a DIP.

vocabulary
A collection of words that the Intuity CONVERSANT system is able to recognize using either WholeWord or FlexWord speech recognition.

vocabulary activation
The set of active vocabularies that define the words and wordlists known to the FlexWord recognizer.

vocabulary loading
The process of copying the vocabulary from the system where it was developed and adding it to the target system.
Voice@Work

An optional software package that provides a graphical interface to assist in development of voice response applications on the Intuity CONVERSANT system (see also “Script Builder”).

voice channel

A channel that is associated with an interface to the telephone network (Tip/Ring, T1, E1, LSE1/LST1, or PRI). Any Intuity CONVERSANT system application can run on a voice channel. Voice channel applications can be initiated by being assigned to particular voice channels or dialed numbers to handle incoming calls or by a “soft seizure” request to TSM from a DIP or the `soft_szr` command.

voice processing co-marketer

A company licensed to purchase voice processing equipment, such as the Intuity CONVERSANT system, to market and sell based on their own marketing strategies.

voice response output process

A software process that transfers digitized speech between system hardware (for example, Tip/Ring and SSP circuit cards) and data storage devices (for example, hard disk, etc.)
voice response unit
A computer connected to a telephone network that can play messages to callers, recognize caller inputs, access and update databases, and transfer and monitor calls.

voice system administration
The means by which you are able to administer both voice- and nonvoice-related aspects of the system.

VPC
voice processing co-marketer

VROP
voice response output process

VRU
voice response unit
warning

An admonishment or advisory statement used in Intuity CONVERSANT system documentation to alert the user to the possibility of equipment damage.

WholeWord speech recognition

An optional feature, available in several languages, based on whole-word technology that can recognize the numbers one through zero, “yes”, and “no” (the key words). This feature is reliable, regardless of the individual speaker. This feature can identify the key words when spoken in phrases with other words. A string of key words, called connected digits, can be recognized. During the prompt announcement, the caller can speak or use touch tones (or dial pulses, if available). See also “whole-word technology.”

whole-word technology

The ability to recognize an entire word, rather than just the phoneme or a part of a word. Compare to “subword technology.”

wink signal

An interruption of current to a busy lamp indicating that there is a line on hold.

word

A unique utterance understood by the recognizer.
**wordlist**

A set of words available for FlexWord recognition by an application during a Prompt & Collect action step.

**word spotting**

The ability to search through extraneous speech during a recognition.
**Numerals**
