- Veritas Software Corporation — Trademarks: VERITAS.
- Xerox Corporation — Trademarks: Ethernet.

Limited Warranty

Lucent Technologies provides a limited warranty on this product. Refer to the “Limited Use Software License Agreement” card provided with your package.

Lucent Technologies has determined that use of this electronic data delivery system cannot cause harm to an end user’s computing system and will not assume any responsibility for problems that may arise with a user’s computer system while accessing the data in these documents.

Every effort has been made to make sure that this document is complete and accurate at the time of release, but information is subject to change.

United States FCC Compliance Information

Part 15: Class A statement. This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.
Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

This digital apparatus does not exceed the Class A limits for radio noise emissions set out in the radio interference regulations of the Canadian Department of Communications.

Le Présent Appareil Nomérique n’émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la class A préscrites dans le reglement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

GENERAL WARNING: The grant of a Telepermit for any item of terminal equipment indicates that only Telecom has accepted that the item complies with minimum conditions for connection to its network. It indicates no endorsement of the product by Telecom, nor does it provide any sort of warranty. Above all, it provides no assurance that any item will work correctly.
in all respects with other items of Telepermitted equipment of a different make or model, nor does it imply that any product is compatible with all of Telecom’s network services.

IMPORTANT NOTICE: Under power failure conditions, this device may not operate. Please ensure that a separate telephone, not dependent on local power, is available for emergency use.

AUTOMATIC RE-ATTEMPTS TO THE SAME NUMBER: Some parameters required for compliance with Telecom’s Telepermit requirements are dependent on the equipment (PC) associated with this device. The associated equipment shall be set to operate within the following limits for compliance with Telecom specifications:

- There shall be no more than 10 call attempts to the same number within any 30 minute period for any single manual call initiation, and,

- The equipment shall go on-hook for a period of not less than 30 seconds between the end of one attempts and the beginning of the next attempt.

AUTOMATIC CALLS TO DIFFERENT NUMBERS: Some parameters required for compliance with Telecom’s Telepermit requirements are dependent on the equipment (PC) associated with this device. In order to operate within the limits for compliance with Telecom specifications, the associated equipment shall be set to ensure that automatic calls to different numbers are spaced such that there is not less than 5 seconds between the end of one call attempt and the beginning of the next attempt.
USER INSTRUCTIONS (AUTOMATIC CALL SETUP): This equipment shall not be set up to make automatic calls to the Telecom “111” emergency service.

CALL ANSWERING (AUTOMATIC ANSWERING EQUIPMENT): Some parameters required for compliance with Telecom’s Telepermit requirements are dependent on the equipment (PC) associated with this device. In order to operate within the limits for compliance with Telecom specifications, the associated equipment shall be set to ensure that calls are answered between 3 and 30 seconds of receipt of ringing.

Toll Fraud

Toll fraud is the unauthorized use of your telecommunications system by an unauthorized party, for example, persons other than your company’s employees, agents, subcontractors, or persons working on your company’s behalf. Note that there may be a risk of toll fraud associated with your telecommunications system and, if toll fraud occurs, it can result in substantial additional charges for your telecommunications services.

Your Responsibility for Your System’s Security

You and your system manager are responsible for the security of your system and for preventing unauthorized use. You are also responsible for reading all installation, instruction, and system administration documents provided with this product in order to fully understand the features that can introduce risk of toll fraud and the steps that can be taken to reduce that risk. Lucent Technologies does not warrant that this product is immune from or will
prevent unauthorized use of common-carrier telecommunication services or facilities accessed through or connected to it. Lucent Technologies will not be responsible for any charges that result from such unauthorized use.

**Lucent Technologies Fraud Intervention and Corporate Security**

If you suspect that you are being victimized by toll fraud and you need technical support or assistance, call the Lucent Technologies National Customer Care Center Toll Fraud Intervention Hotline at 1 800 643-2353.

Aside from whether immediate support is required, all toll fraud incidents involving Lucent products or services should be reported to Lucent Corporate Security at 1 800 821-8235. In addition to recording the incident, Lucent Corporate Security is available for consultation on security issues, investigation support, referral to law enforcement agencies, and educational programs.
To order a document, contact the Lucent Technologies Publications Center and specify the 9-digit document number, the issue number, and the issue date.

About This Book

Overview

This book contains instructions for installing an Intuity CONVERSANT system that has been assembled, loaded, and tested (ALT) at the Lucent Technologies factory. It includes procedures for assembling, setup, configuration, initial administration, acceptance testing, and cut to service. These procedures apply to all platforms and the Intuity CONVERSANT system and most of its optional features.
Intended Audiences

This book is intended primarily for the on-site technical personnel who are responsible for installing the system and performing initial administration and acceptance testing. Secondary audiences include the following from Lucent Technologies:

- Field support
- Helpline personnel
- Factory assemble, load, and test (ALT) personnel
- Provisioning project managers—Sales and Technical Resource Center (STRC)

We assume that the primary users of this book have completed the CONVERSANT hardware installation training course (see Training on page xxxvi).

How to Use This Book

This book is designed to step you through the entire installation process. You can also use it as a quick-reference to obtain specific information you may need on a particular topic.
<table>
<thead>
<tr>
<th>About This Book</th>
<th>How to Use This Book</th>
</tr>
</thead>
<tbody>
<tr>
<td>Each chapter contains the installation information common to all CONVERSANT platforms. Any differences are identified in the paragraph heading, table headings, and noted within the text.</td>
<td></td>
</tr>
<tr>
<td>For Complete Installation Instructions</td>
<td>Read Chapter 1, Getting Started, before you begin for information on prerequisites, including site preparation and the tools and information you need to complete the installation successfully. From there, read and use each chapter in the order presented. This takes you step by step through the procedures you must perform to install a factory assembled, loaded, and tested (ALT) CONVERSANT system.</td>
</tr>
<tr>
<td>Note: If you are installing a non-ALT system, see Appendix C, “How to Build a System Using This Book,” in the maintenance book specific to your platform, for instructions.</td>
<td></td>
</tr>
<tr>
<td>For a Quick Reference</td>
<td>If you want a quick reference, the System Installation Checklist on page 25 in Chapter 1, Getting Started, contains a checklist of procedure titles. These titles are listed in the order in which you must perform them. Also included are references to where you will find the complete procedures in this book.</td>
</tr>
<tr>
<td>For Troubleshooting Information</td>
<td>Where troubleshooting information is available, notes in the text refer you to the appropriate place in Appendix A, Troubleshooting Procedures, to look for help.</td>
</tr>
<tr>
<td>For Connectivity Information</td>
<td>For supplemental connectivity information, see Appendix B, Cable Connectivity.</td>
</tr>
</tbody>
</table>
About This Book

To Locate Specific Topics

This book includes an alphabetical index at the end for quick access to specific topics.

It also contains a glossary of terms.

Conventions Used in This Book

Understanding the typographical and other conventions used in this book is necessary to interpret the information.

Terminology

• The word “type” means to press the key or sequence of keys specified. For example, an instruction to type the letter “y” is shown as Type y to continue.

• The word “enter” means to type a value and then press the ENTER key on the keyboard. For example, an instruction to type the letter “y” and press ENTER is shown as Enter y to continue.

• The word “select” means to move the cursor to the desired item and then press ENTER. For example, an instruction to move the cursor to the start test option on the Network Loop-Around Test screen and then press ENTER is shown as Select Start Test.
About This Book

- The system displays menus, screens, and windows. Menus allow you to select options or to choose to view another menu, screen, or window (Figure 1 on page xxvi). Screens and windows both show and request system information (Figure 2 on page xxvii through Figure 5 on page xxix).

Note: Screens shown in this book are examples only. The screens you see on your machine will be similar, but not exactly the same.

Figure 1. Example of an Intuity CONVERSANT Menu
Figure 2. Example of an Intuity CONVERSANT Window Requesting Information

```
Replace Disk

Enter the logical name of disk: 

Enter jumper id of the disk being replaced (0-7): 
```

Figure 3. Example of an Intuity CONVERSANT Window Showing Information

```
6
```

Define User Password Information

The password has been defined as follows:

```
jd    PS   08/08/96   0    24    1
```
In order to install UnixWare, you must reserve a partition (a portion of your hard disk’s space) on your primary hard disk for the UNIX System. After you press ‘ENTER’ you will be shown a screen that will allow you to create new partitions, delete existing partitions or change the active partition of your primary hard disk (the partition that your computer will boot from).

WARNING: All files in any partition(s) you delete will be destroyed. If you wish to attempt to preserve any files from an existing UNIX System, do not delete its partition(s).

The UNIX System partition that you intend to use on the primary hard disk must be at least 120 MBs and labeled ‘ACTIVE.’
You may use a partition of your secondary hard disk. If you choose to use a partition of your secondary hard disk you will be shown a screen that will allow you to partition your secondary hard disk.

WARNING: All files in any partition(s) you delete will be destroyed.

If you choose to create a UNIX System partition on your secondary hard disk, it must be at least 40 MBs.

Your Options are:

1. Do not use a partition of the secondary hard disk for the UNIX System.
2. Use a partition of the secondary hard disk for the UNIX System.

Press '1' or '2' followed by 'ENTER'.
About This Book

Conventions Used in This Book

Keyboard and Telephone Keypad Representations

• Keys that you press on your terminal or PC are represented as small capitalized **BOLD** text. For example, an instruction to press the enter key is shown as
  Press **ENTER**.

• Two or three keys that you press at the same time on your terminal or PC (that is, you hold down the first key while pressing the second and/or third key) are represented in small capitalized **BOLD** text. For example, an instruction to press and hold the Alt key while typing the letter “d” is shown as
  Press **ALT + D**.

• Function keys on your terminal, PC, or system screens, also known as soft keys, are represented as small capitalized **BOLD** text followed by the function or value of that key enclosed in parentheses. For example, an instruction to press function key 3 is shown as
  Press **F3 (Choices)**.

• Keys that you press on your telephone keypad appear in small capitalized **BOLD** text. For example, an instruction to press the first key on your telephone keypad is shown as
  Press **1** to record a message.
Cross References and Hypertext

Blue underlined type indicates a cross reference or hypertext link that takes you to another location in the document when you click on it with your mouse.

Screen Displays

- Values, system messages, field names, prompts that appear on the screen, and simulated screen displays are shown in typewriter-style constant width type, as in the following examples:

Enter the number of ports to be dedicated to outbound traffic in the Maximum Simultaneous Ports field.

Alarm Form Update was successful.
Press <Enter> to continue.

- The sequence of menu options that you must select to display a specific screen or submenu is shown as follows:

Start at the Voice System Administration menu and select:

Reports

Message Log Reports

In this example, you would access the Voice System Administration menu and select the Reports menu. From the Reports menu, you would then select the Message Log Reports option.
About This Book

Safety and Security Alert Labels

Other Typography

• Commands and text you type in or enter appear in bold type, as in the following examples:

  Enter change-switch-time-zone at the Enter command: prompt.
  Type high or low in the Speed: field.

• Command variables are shown in bold italic type when they are part of what you must type in, and in blue italic type when they are referred to, for example:

  Enter ch ma machine_name, where machine_name is the name of the call delivery machine you just created.

• Command options are shown inside square brackets, for example:

  Enter connect switchname [-d] [-b | -w]

Safety and Security Alert Labels

This book uses the following symbols to call your attention to potential problems that could cause personal injury, damage to equipment, loss of data, service interruptions, or breaches of toll fraud security:

⚠️ CAUTION:
Indicates the presence of a hazard that if not avoided can or will cause minor personal injury or property damage, including loss of data.
**About This Book**

**Safety and Security Alert Labels**

⚠️ **WARNING:**
Indicates the presence of a hazard that if not avoided can cause death or severe personal injury.

⚠️ **DANGER:**
Indicates the presence of a hazard that if not avoided will cause death or severe personal injury.

⚠️ **SECURITY ALERT:**
Indicates the presence of a toll fraud security hazard. Toll fraud is the unauthorized use of a telecommunications system by an unauthorized party.
Getting Help

The Intuity CONVERSANT system provides online help to assist you during installation, administration, and application development tasks.

To use the online help:

- Press F1 (Help) when you are in a menu or window.
  - The first time you press F1, the system displays information about the currently active window or menu.
  - When you are in a window, the help explains the purpose of the window and describes its fields.
  - When you are in a menu, the help explains how to use menus.
  - If you press F1 again, the system displays a General Help screen that explains how to use the online help.

- Press F2 (Choices) when you are in a field.
  - The system displays valid field choices either in a pop-up window or on the status line directly above the function keys.

- Press F6 (Cancel) to exit the online help.
Technical Assistance

Web Site

The following customer support web site contains resources where you can find solutions for technical problems:

http://support.lucent.com

Contact Numbers

Technical assistance on the Intuity CONVERSANT product is available through the following telephone contacts:

- In the United States, call 1-800-242-2121.
- In Canada, call one of the following numbers, depending on your location:
  ~ 1-800-363-1882 for assistance in Quebec and eastern Canada
  ~ 1-800-387-4268 for assistance in Ontario and western Canada
- In any other country, call your local distributor or check with your project manager or systems consultant.

Related Resources

Additional documentation and training material is available for you to learn more about the Intuity CONVERSANT product.
To obtain training on the Intuity CONVERSANT product, contact the BCS Education and Training Center at one of the following numbers:

- Organizations within Lucent Technologies (904) 636-3261
- Lucent Technologies customers and all others (800) 255-8988

You can also view information on Intuity CONVERSANT training at the Global Learning Solutions (GLS) web site at one of the following web links:

- Organizations within Lucent Technologies
  http://training.gls.lucent.com
- Lucent Technologies customers and all others

~ BTC301H, Advanced CONVERSANT Programming

Documentation

Note: Always refer to the appropriate book for specific information on planning, installing, administering, or maintaining an Intuity CONVERSANT system.

Additional Suggested Documentation

It is suggested that you also obtain and use the following book for information on security and toll fraud issues:

• GBCS Products Security Handbook, 555-025-600

Obtaining Printed Versions of the Documentation

See Documentation Ordering Information on page ix of Copyright and Legal Notices for information on how to purchase Intuity CONVERSANT documentation in printed form. You can also print documentation locally from the CD-ROM (see Printing the Documentation on page xxxix).
Using the CD-ROM Documentation

Lucent Technologies ships the documentation in electronic form. Using the Adobe Acrobat Reader application, you can read these documents on a Windows PC, on a Sun Solaris workstation, or on an HP-UX workstation. Acrobat Reader displays high-quality, print-like graphics on both UNIX and Windows platforms. It provides scrolling, zoom, and extensive search capabilities, along with online help. A copy of Acrobat Reader is included with the documents.

**Note:** When viewing documents online, it is recommended that you use a separate platform and not the Intuity CONVERSANT system.

### Setting the Default Magnification
You can set your default magnification by selecting `File | Preferences | General`. We recommend the `Fit Page` option.

### Adjusting the Window Size
On HP and Sun workstations, you can control the size of the reader window by using the `-geometry` argument. For example, the command string `acroread -geometry 900x900 mainmenu.pdf` opens the main menu with a window size of 900 pixels square.

### Hiding and Displaying Bookmarks
By default, the document appears with bookmarks displayed on the left side of the screen. The bookmarks serve as a hypertext table of contents for the chapter you are viewing. You can control the appearance of bookmarks by selecting `View | Page Only` or `View | Bookmarks and Page`. 
<table>
<thead>
<tr>
<th>About This Book</th>
<th>Using the CD-ROM Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Using the Button Bar</strong></td>
<td>The button bar can take you to the book’s Index, table of contents, main menu, and glossary. It also lets you update your documents. Click the corresponding button to jump to the section you want to read.</td>
</tr>
<tr>
<td><strong>Using Hypertext Links</strong></td>
<td>Hypertext links appear in blue underlined text. These links are shortcuts to other sections or books.</td>
</tr>
<tr>
<td><strong>Navigating with Double Arrow Keys</strong></td>
<td>The double right and double left arrows ( and ) at the top of the Acrobat Reader window are the go-back and go-forward functions. The go-back button takes you to the last page you visited prior to the current page. Typically, you use to jump back to the main text from a cross reference or illustration.</td>
</tr>
<tr>
<td><strong>Searching for Topics</strong></td>
<td>Acrobat has a sophisticated search capability. From the main menu, select Tools</td>
</tr>
<tr>
<td><strong>Displaying Figures</strong></td>
<td>If lines in figures appear broken or absent, increase the magnification. You might also want to print a paper copy of the figure for better resolution.</td>
</tr>
<tr>
<td><strong>Printing the Documentation</strong></td>
<td><strong>Note:</strong> For information on purchasing printed copies of the documents, see Obtaining Printed Versions of the Documentation on page xxxvii.</td>
</tr>
<tr>
<td></td>
<td>If you would like to read the documentation in paper form rather than on a computer monitor, you can print all or portions of the online screens.</td>
</tr>
</tbody>
</table>
Printing an Entire Document
To print an entire document, do the following:

1. From the documentation main menu screen, select one of the print-optimized documents. Print-optimized documents print two screens to a side, both sides of the sheet on 8.5x11-inch or A4 paper.

2. Select File | Print.

3. Enter the page range you want to print, or select All. Note that the print page range is different from the page numbers on the documents (they print two to a page).

4. The document prints.

5. Close the file. Do not leave this file open while viewing the electronic documents.

Printing Part of a Document
To print a single page or a short section, you can print directly from the online version of the document.

1. Select File | Print.

2. Enter the page range you want to print, or select Current.

   The document prints, one screen per side, two sides per sheet.
How To Comment on This Book

While we have tried to make this document fit your needs, we are interested in your suggestions for improving it and urge you to send your comments to us.

Comment Form

A comment form, available in paper and electronic versions, is available via the documentation CD-ROM. To use the comment form:

1. Select Comments from the Main Menu of the CD-ROM.
2. Follow the instructions provided on the CD-ROM to do one of the following:
   ~ Print the paper version of the form, complete it, and either fax or mail it to us.
   ~ Access a Lucent Technologies website where you can enter your comments electronically.
About This Book

Contact Us Directly If you prefer not to use the comment form, you can contact us directly at the following address or fax number.

Note: Direct your correspondence to the attention of the Lucent Technologies Intuity CONVERSANT writing team. Be sure to mention the title of the book on which you are commenting.

Overview

The purpose of this chapter is to ensure that:

• The customer site meets the physical requirements for unit installation
• You are prepared with the tools and information you need to complete the CONVERSANT system installation successfully

This chapter also describes:

• Site preparation for the computer, including environmental, space, and power requirements
• Installation prerequisites; specifically, safety precautions, tools, test equipment, system information, return and repair procedures, and switch administration requirements
• Points of demarcation for installation and maintenance
• Your responsibility with regard to the security of the customer’s system
• Technical assistance and other resources available to you during the installation
1 Getting Started

Before You Arrive on Site

• A checklist of the required procedures, in sequence, to use when installing an assembled, loaded, and tested (ALT) system.

The installation procedures in this book assume that you know how to log on and off the system and how to move around using the CONVERSANT system screens. See Intuity CONVERSANT System Version 7.0 Administration, 585-313-501, for information on screen interface.

Before You Arrive on Site

Initial switch or PBX administration should be complete before you arrive on site unless otherwise specified by contract. Verify that the following has been completed before you begin work on the CONVERSANT system.

• Switch administration
• Site preparations

Switch Administration

The switch or PBX must be administered to support the following situations:

• Testing each channel connected to the system before assigning the channel(s) to the CONVERSANT system or another application
• Testing the CONVERSANT system
1 Getting Started

Site Preparation

This section describes physical requirements for the installation site:

• Environmental considerations
• Installation area considerations
• Weight and space considerations
• Power requirements

Environmental Considerations

Place the unit in an area where the environmental conditions shown in Table 1 on page 3 are maintained.

Table 1. Environmental Considerations

<table>
<thead>
<tr>
<th>Platform</th>
<th>Operating State</th>
<th>Nonoperating State</th>
</tr>
</thead>

</tr>
<tr>
<td>MAP/100C</td>
<td>+10 to +38°C (+50 to+100°F)</td>
<td>—</td>
</tr>
</tbody>
</table>

Installation Area Considerations

- Observe the following when determining where to place the computer:
  - Do not install the unit in an area with high-power electrical equipment.
  - Do not install the unit in the same area as copier machines because of the paper particles created by such equipment.
  - Install the unit in an area that provides protection from excessive sunlight, heat, cold, chemicals, static electricity, magnetic fields, vibration, dust, and grime.
  - Maintain an air-distribution system that provides adequately cooled, filtered, and humidity-controlled air.
  - Provide surge protection and power backup in areas with volatile power (brown-outs or frequent power surges).
1 Getting Started

Before You Arrive on Site

• Provide additional grounding if necessary in a multiple-system installation to facilitate an environment that is free of radio-frequency noise.

• Verify that the commercial cabinet is secure to the floor when installing a rack-mount unit.

Weight and Space Considerations

Table 2 on page 5 lists the approximate weight, size, height, and depth for each platform. Note that the weight listed includes only the basic chassis, cartridge tape drive, diskette drive, four hard disks (for MAP/100P), and three circuit cards.

Table 2. Platform Weight and Space Considerations

<table>
<thead>
<tr>
<th>Platform</th>
<th>Weight</th>

</tbody>
</table>

* National Electrical Manufacturer’s Association.

In addition to the above power requirements, you must also:

- Locate each unit and printer within 2 meters (6 feet) of its power receptacle.
1 Getting Started

Safety Precautions

- Keep the communication cables separate from the power cables.
- Install communication and power cables in accordance with National Electrical Codes (NEC).
- Use the AC power output receptacle on the back of the unit for a video monitor only. Never plug any other device into this receptacle.

⚠️ CAUTION:

Use only shielded cables and equipment in conjunction with the computer to maintain safe levels of electromagnetic compatibility.

Safety Precautions

There are safety areas that you must be aware of and take the necessary precautions. These areas are:

- Protecting circuit cards against electrostatic discharge (ESD) damage
- System grounding
1 Getting Started

Safety Precautions

Protecting Against Damage from ESD

⚠️ CAUTION:
Read this section before unpacking the computer. You must observe proper grounding techniques to prevent the discharge of static electricity from your body into ESD-sensitive components.

Circuit cards and packaging materials that contain ESD-sensitive components are usually marked with a yellow-and-black warning symbol (Figure 6 on page 11).

Figure 6. ESD Warning Symbol
1 Getting Started

Safety Precautions

Avoid damaging ESD-sensitive components by following these rules:

- Attach an ESD wrist strap to your bare wrist and the other end of the strap to a ground that terminates at the system ground, such as any unpainted metallic chassis surface. Handle ESD-sensitive circuit cards only after doing so.
- Handle a circuit card by the faceplate or side edges only.
- Keep circuit cards away from plastics and other synthetic materials such as polyester clothing.
- Do not pass circuit cards to another person unless that person is grounded at the same potential level.
- Hold devices such as a hard disk, floppy drive, or streaming tape in the same manner as a large circuit card. The ESD-sensitive area of these components is located on the bottom surface.

⚠️ CAUTION:
Ensure that your palm is not in contact with the non-component side of the board.
System Grounding Connections

To maintain electromagnetic interference (EMI) protection, personal protection, and immunity from circuit noise, customer-premise-provided outlets must be grounded in accordance with NEC and applicable local codes.

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground. Use extreme care when you make power and ground connections.

Regulatory Agency Guidelines

This section contains the information needed to ensure compliance with government regulatory agencies in the United States and Canada.

- Within the United States
  If you are installing this system within the United States, follow the installation procedures in this book and the guidelines listed in FCC Guidelines on page 14 to ensure compliance with the current "Federal
1 Getting Started

Communications Commission (FCC) rules regarding radio-frequency devices (FCC Rules, Part 15) and the connection of terminal equipment to the telephone network (FCC Rules, Part 68).

FCC/CSA Part agency compliance labels for the system card and individual network interface cards are located on the rear surface of the chassis or the individual circuit card.

- Within Canada

If you are installing this system in Canada, follow the installation procedures in this book and the guidelines listed in Equipment Attachment Limitations on page 17 to ensure compliance with the current Canadian Department of Communications protective, operational, and safety requirements for telecommunications networks.

FCC Guidelines

The guidelines in this section will help you to comply with FCC procedures as you connect to the public telephone network.

Before You Connect to the Public Telephone Network

Before you make any connections to the public telephone network, the local service provider has the right to and may request the following information:

- The telephone and circuit numbers of the lines to which the system will be connected
• The following FCC registration numbers
  ~ The FCC registration number is located on the faceplate of each Tip/Ring circuit card and is visible at the rear of the unit.
  ~ For the AYC10 Tip/Ring circuit card: AS5USA-20411-VM-E (This number is also located on the faceplate of the circuit card).
  ~ For the AYC21 E1/T1 circuit card: AS5USA-24091-XD-E (This number is also located on the faceplate of the circuit card).
• The following ringer equivalence numbers (REN):
  ~ For the AYC10 Tip/Ring circuit card: 1.0B (This number is also located on the faceplate the circuit card).
• The following facility interface codes (FIC) for the AYC21 E1/T1 circuit card:
  ~ 04DU9-BN
  ~ 04DU9-DN
  ~ 04DU9-1SN
• The following service order codes (SOC) for the AYC21 E1/T1 circuit card:
  ~ 6-0P
### 1 Getting Started

#### Type of Telephone Lines Needed

**Note:** Metallic pair services for metallic channel ports may not be available at all locations.

- Use your application on standard-device telephone line circuits and standard T1 or E1 trunks.
- Do not connect to coin service (central office implemented systems) from the service provider.
- Note that connecting to party-line service is subject to state tariffs.

If you have any other questions about the telephone line(s), such as how many pieces of equipment you can connect to a line, contact the service provider.

#### Telephone Service and Repair Problems

- If the service provider notes a problem with customer equipment, the provider may discontinue service to the customer temporarily, with or without prior notification. If advance notice is not feasible, the service provider must:
  - Notify the customer as soon as possible.
  - Give the customer an opportunity to correct the problem.
  - Inform the customer of the right to file a complaint with the FCC.
1 Getting Started

Regulatory Agency Guidelines

- If any of the CONVERSANT equipment is not operating properly, remove it immediately from the telephone lines. Malfunctioning equipment can harm the telephone network. Notify the service provider immediately if you are permanently or temporarily disconnecting the system from its present line or trunk circuits. (This applies to digital circuits ONLY.)

⚠️ CAUTION:

If you disconnect the system from the telephone network on a continuing basis without advising the service provider, that company has the right to discontinue your service permanently. (This applies to digital circuits ONLY.)

- It is a violation of FCC Rules, Part 68 for a customer to attempt repairs of any Tip/Ring (AYC10 or AYC30) circuit card. Call one of the numbers listed in Technical Assistance on page xxxv for authorized repairs.

Equipment Attachment Limitations

Note: This section applies to Canadian customers only.

The Canadian Department of Communications label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational, and safety requirements. The Department does not guarantee the equipment will operate to the user’s satisfaction.
Before installing the equipment, ensure that it is permissible to be connected to the facilities of the local service provider. The equipment must be installed using an acceptable method of connection. In some cases, the company’s inside wiring associated with a single line individual service can be extended by means of a certified connector assembly (telephone extension cord). Be aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment must be made by an authorized Canadian maintenance facility designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the service provider cause to request that the user disconnect the equipment.

For your own protection, ensure that the electrical ground connections of the power utility, telephone lines, and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

⚠️ CAUTION:
Do not attempt to make such connections. Contact the appropriate electric inspection authority or electrician as appropriate.

The Load Number (LN) assigned to each terminal device denotes the percentage of the total load to be connected to a telephone loop that is used by the device, to prevent overloading. The termination on a loop can consist...
1 Getting Started

Points of Demarcation

of any combination of devices, and is subject to only one requirement: the total of the Load Numbers of all devices cannot exceed 100.

Points of Demarcation

A demarcation point defines the extent of Lucent Technologies’ responsibilities for a product. Beyond this point, the customer is responsible for providing overall service.

When installing a CONVERSANT system, you must be aware of the following demarcations:

• Non-Lucent Technologies switches or PBXs
• Local area network (LAN) connectivity
• CONVERSANT Script Builder FAX Actions demarcation

Non-Lucent Technologies Switch or PBX Demarcation

Lucent Technologies service technicians dispatched for CONVERSANT system installation are not responsible for making any connections directly to switches or PBXs not maintained by Lucent Technologies.
1 Getting Started

**Points of Demarcation**

**Note:** Lucent Technologies recommends joint acceptance testing for systems integrated with non-Lucent Technologies switches and PBXs.

For additional information concerning the extent of the installation, refer to the contract between the customer and Lucent Technologies.

**LAN Connectivity Demarcation**

The demarcation point for the CONVERSANT system is the point of connection into the LAN circuit card. The customer is responsible for:

- The LAN cable
- The connector at the end of the cable for connection to the CONVERSANT system
- LAN administration not performed on the CONVERSANT system
- Maintaining the administration of the CONVERSANT system after cutover, unless otherwise specified by contract

Lucent Technologies service technicians dispatched for CONVERSANT system installation are not responsible for troubleshooting the customer's LAN.
Script Builder FAX Actions Demarcation

CONVERSANT Script Builder FAX Actions uses the same equipment as CONVERSANT voice processing. The universal ports support both voice and fax without additional cabling or hardware. Lucent Technologies service technicians dispatched for CONVERSANT system installation are not responsible for troubleshooting customer fax machines.

Maintaining System Security

During an installation, security of the customer’s system is your responsibility. You must take the following precautions to protect password and system security:

• For password security — If you suspect that the security of any password has been compromised, notify your project manager or system administrator.

• For system security — Do not leave a logged-on terminal unattended. Always log off the system if you will be leaving it unattended, even for a short period of time.
Return and Repair

In case you need to return the unit to Lucent Technologies, save the following shipping and packing materials:

⚠️ CAUTION:
Lucent Technologies does not accept liability for a damaged unit if you do not return it in the original packing materials and carton.

- Shipping cartons (unit, keyboard and monitor) and boxes
- Antistatic bags
- Protective plastic wrap
- Foam inlays

Fill out the yellow BCS return and repair tag, one of the items in the plastic packet, repack and return to Lucent Technologies.

Note: If you ordered multiple units, saving one set of cartons and packing materials should be sufficient.
Tools and Test Equipment

Use the following recommended tools and test equipment for installing the computer:

- A medium-width flat-blade screwdriver.
- A No. 2 Phillips screwdriver or large Phillips set.
- A small pair of needle-nose pliers.
- A small pair of wire cutters.
- A sharp, pointed instrument such as a ball-point pen.

⚠️ CAUTION:
Do not use the point of a pencil. The graphite can damage a circuit card and cause problems such as electrical shorts.

- A volt/ohm meter.
- A telephone connected through the switch.
- If the system includes CONVERSANT Script Builder FAX Actions, you must have access to a customer fax machine for testing.
Documentation

Your primary book is the *CONVERSANT System Version 7.0 New System Installation Manual*, 585-313-106. Table 6 on page 24 lists reference documents that are common to all platforms to assist you with the installation.

Table 6. Common Reference Documents

<table>

System Installation Checklist

The checklist (Table 7 on page 25) provides a description of the required procedures numbered in the sequence in which you must complete them. The “Chapter” and “Section” columns refer you to the appropriate chapter number and section title of this book or to a switch integration book.

As you complete a procedure, make a check mark in the “4” column.

2 Assembling the Computer

Overview

This chapter is designed to provide descriptions and illustrations of key components for reference during the installation and ensure proper connectivity to all peripherals.

This chapter describes:

- Shipment contents
- Where to locate key components
- The procedures to:
  - Install the toroids
  - Assembling the MAP
  - Connect the monitor
  - Connect the keyboard
  - Connect a printer
Shipment Contents

You should have received three boxes containing the computer, keyboard, and monitor.

⚠️ CAUTION:
Depending on the platform being installed, a boxed, fully-loaded computer weighs between 20 kg and 63 kg (45 to 140 lbs).

Be sure that you have the following items packed in the box or boxes:
- A wrapped, protective plastic packet containing stabilizing feet (for MAP/5P and MAP/40P) and an instruction sheet for installing them.
- One 2- to 3-m (6- to 8-ft) power cord (depending on country).
  ~ A second power cord, if included, is used for the MAP/5P monitor.
- Installation and maintenance books (in a cardboard box).
- One plastic packet containing:
  ~ 1 blank cartridge tape
  ~ 1 diskette with the system configuration and software
  ~ 1 diagnostic diskette
  ~ 1 yellow BCS return repair tag
  ~ Factory information regarding the system
CAUTION:
Do not use the bezel cover as a grip area to move or lift the computer. Lift only by the unit frame.

Installing Toroids and Ferrites

Note: Toroids are installed only on MAP/40P systems.

Before connecting peripherals or external devices, it is necessary to install ferrites to interface cables as required. All installations require the use of ferrites to meet the individual country agency EMC (electromagnetic compatibility) regulations. Installation of ferrites must be in accordance with these procedures to meet individual country compliances.

A toroid (Type A), used only on a MAP/40P system, is a 2.5 inch (6.4 cm) circular ferrite (comcode: 405853458). Toroids are made of a highly conductive carbon type of material that is very brittle. If a toroid ring fractures, it should immediately be replaced.

A ferrite (Type B) is a 1 inch (2.5 cm) rectangular device. Ferrites are made of a variable conductive carbon type material to reduce special EMI (electromagnetic interference) frequency band width. Available in split and solid ferrite forms, a special snap-back protective cover is used to install and keep the halves together.
General Toroid and Ferrite Installation Guidelines

⚠️ CAUTION:
Handle toroids and ferrites with care. Toroids and ferrites are easily fractured or broken. Immediately replace any fractured or broken toroids or ferrites as they are no longer effective for EMC control.

When installing toroids or ferrites:
- Install toroids or ferrites to cables as required.
- Minimize the amount of cable between the toroids or ferrites and the computer chassis.
- Wrap cables as tightly as possible. Do not leave large amounts of slack in the loop(s).
- Use cable ties, when required, behind the ferrites to keep the ferrites in place.

**Installing a Ferrite**

To install a ferrite, do the following:

1. Open the ferrite by gently pulling the fastener away from the body of the ferrite.
2 Assembling the Computer

Installing Toroids and Ferrites

2 Place the cord or cable in the groove inside the ferrite (Figure 7 on page 37).

Note: Maintain minimum cable lead length between the ferrite and the computer chassis.

Figure 7. Example Ferrite (Type B) Installation

1. Ferrite in open position
2. Ferrite in snapped closed position
3. Cable tie
4. To the computer
If the cable is to be wrapped around the ferrite, wrap the cable tightly around half of the ferrite and place the cable into the groove (Figure 8 on page 38).

If the cable is to be wrapped around two ferrites, ensure the second ferrite is close to the first ferrite assembly (Figure 9 on page 39).

Figure 8. Example of Cable Wrapped Around Ferrites
2 Assembling the Computer

Installing Toroids and Ferrites

Figure 9. Example Double Ferrite Installation

3 Gently snap the ferrite shut.

4 Attach a cable tie (Figure 7 on page 37), when required, directly behind the last ferrite to secure it.

Note: If the cable is wrapped around the ferrite(s), no cable tie is required.

5 Trim the cable tie.
Installing a Toroid on the MAP/40P

The following is the general toroid installation procedure to be used on a MAP/40P system. Figure 10 on page 41 shows an example of a paired toroid installation.

To install a toroid, do the following:

1. Place the toroid close to the computer chassis.
2. Wrap each modular cable tightly around the toroid.
3. Secure the cable(s) with a small cable tie to reduce cable movement.
4. Trim off any excess from the cable tie.
Figure 10. Example Toroid Installation
Assembling the MAP/5P

The following sections and graphics contain the information needed to attach ferrites, the stabilizing feet, locate key components, and provide proper clearing for the cooling system of the MAP/5P.

MAP/5P Electromagnetic Interference Reduction Components

Table 8 on page 42 lists the ferrites to be installed on a MAP/5P system installed that uses the AYC30 Tip/Ring circuit card.

Note: Table 8 on page 42 contains data for a MAP/5P system installed with a 200 MHz CPU.

Table 8. MAP/5P Ferrite Installation Using the AYC30 Tip/Ring Circuit Card

Attaching the MAP/5P Stabilizing Feet

The MAP/5P is a deskside unit in a mini-tower configuration. This unit sits either on your desktop or on the floor under your desk and requires that you position the stabilizing feet.

The MAP/5P includes four stabilizing feet attached to the bottom of the chassis. Position the stabilizing feet according to the following procedure:

1. Place the MAP/5P right side up on its stabilizing feet.

⚠️ CAUTION:
Do not use the dress cover as a grip area to move or lift the MAP/5P.

2. Firmly grasp a corner of the chassis to stabilize the unit.

3. Turn the stabilizing feet out into position, until they click, as shown in Figure 11 on page 44. Ensure that each foot is fully extended into position. See Proper Clearance Around the MAP/5P on page 56 for information about the proper placement of the MAP/5P.
Figure 11. Positioning the MAP/5P Stabilizing Feet (Bottom View)
Key Components on the Front of the MAP/5P

<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Circuit Card Cage Fan</td>
<td>Air flows through the circuit card cage fan and exits through vents in the back of the computer.</td>
<td>MAP/5P has 1 fan. It is located on the front of the MAP/5P under the diskette bays and behind the lower front dress cover. See Figure 12 on page 45 for location.</td>
</tr>
<tr>
<td>Power Supply Fan</td>
<td>The power supply fan is located within the power supply. This fan exhausts air to the rear of the unit.</td>
<td></td>
</tr>
<tr>
<td>CPU Fan</td>
<td>The CPU fan is located on top of the CPU.</td>
<td></td>
</tr>
</tbody>
</table>
You must also maintain clearance around the chassis so that air can circulate to prevent overheating. The final position of the computer must include a front-to-back clearance of at least 16 cm (6 in.) to provide for adequate air intake and exhaust.

The MAP/5P chassis has vents on both sides. If viewed from the front, the left vent is larger than the right vent. Wherever possible, position the MAP/5P with the left vent away from a wall or the side of a desk to allow proper air circulation. You must leave a minimum of 5 cm (2 in.) of space along both sides of the chassis.

Continue with the following procedures:

1. Connecting the Monitor on page 121
2. Connecting the Keyboard on page 126
3. Connecting the Printer on page 128

**Assembling the MAP/40P**

The following sections and graphics contain the information needed to attach ferrites, the stabilizing feet, locate key components, and provide proper clearing for the cooling system of the MAP/40P.

This section describes how to perform the necessary requirements to install your system.
2 Assembling the Computer

MAP/40P Electromagnetic Interference Reduction Components

Table 13 on page 57 lists the ferrites to be installed on a MAP/40P system that uses the AYC10 Tip/Ring circuit card. Table 14 on page 58 lists the ferrites to be installed on a MAP/40P system that uses the AYC30 Tip/Ring circuit card.

Table 13. MAP/40P Ferrite Installation Using the AYC10 Tip/Ring Circuit Card

</tr>
</tbody>
</table>
2 Assembling the Computer

Attaching the MAP/40P Stabilizing Feet

The MAP/40P is a deskside unit in a tower configuration. It sits vertically on a small support base and requires that you attach the stabilizing feet.

The manufacturer attaches four screws to the bottom of the unit to use with the stabilizing feet. See Figure 15 on page 60 for a view of the stabilizing feet. Use a No. 2 Phillips screwdriver to attach the stabilizing feet according to the following procedure:

1. Remove the stabilizing feet from the plastic packet.
2. Remove the paper surrounding the stabilizing feet.

Table 14. MAP/40P Ferrite Installation Using the AYC30 Tip/Ring Circuit Card

<table>
<thead>
<tr>
<th>Component</th>

</tr>
</thead>
</table>
| Tip/Ring circuit card (AYC30) | Place 2 ferrites on each modular cable. | • Wrap the modular cable once around each ferrite.  
• Wrap each modular cable twice through the toroid. See Installing a Toroid on the MAP/40P on page 40 for general toroid installation procedures. |
Assembling the Computer

3 Place the unit bottom up.

4 Turn the stabilizing feet upside down with wings up.

5 Lower the stabilizing feet onto the mounting screws through the keyhole openings.

6 Rotate the stabilizing feet until they are perpendicular to the unit.

Note: See the manufacturer’s instruction sheet included in the plastic packet for more information.

7 Using a No. 2 Phillips head screwdriver, tighten the four mounting screws to secure the feet to the MAP/40P.

8 Grip opposite corners of the chassis and reset the MAP/40P in an upright position.

Note: The final position of the MAP/40P must include a front-to-back clearance of at least 16 cm (6 in.) to provide adequate air intake and exhaust.

<tr>
<td>Power Supply Fan</td>
<td>The power supply fan is located within the power supply. This fan exhausts air to the rear of the unit.</td>
<td></td>
</tr>
</tbody>
</table>
Proper Clearance Around the MAP/40P

You must also maintain clearance around the chassis so that air can circulate to prevent overheating. The final position of the computer must include a front-to-back clearance of at least 16 cm (6 in.) to provide for adequate air intake and exhaust. You must leave a minimum of 5 cm (2 in.) of space along both sides of the chassis.

Continue with the following procedures:

1. Connecting the Monitor on page 121
2. Connecting the Keyboard on page 126
3. Connecting the Printer on page 128

Assembling the Deskside MAP/100P

The following sections and graphics contain the information needed to install ferrites, activate caster locking mechanisms, locate key components, and provide proper clearance for the cooling system of the deskside MAP/100P.
Assembling the Deskside MAP/100P Electromagnetic Conductance Reduction Components

Table 18 on page 71 lists the ferrites to be installed on a MAP/100P system that uses the AYC10 Tip/Ring circuit card. Table 19 on page 72 lists the ferrites to be installed on a MAP/100P system that uses the AYC30 Tip/Ring circuit card.

Installing a Deskside MAP/100P

If ordered as a deskside unit, the side panel and base are factory installed and no additional assembly is needed. However, you must lock the rolling casters once you have positioned the unit.
2 Assembling the Computer

Assembling the Deskside MAP/100P

Deskside units (Figure 21 on page 75) are equipped with four casters that allow you to roll the unit around as required. Once you position it, press down the locking mechanisms located on each caster to secure the MAP/100P in place.

*Intuity™ CONVERSANT® System Version 7.0 New System Installation 585-313-106 Issue 3 January 2000 83*
2 Assembling the Computer

The fans maintain air flow in the unit to prevent components from overheating, which can cause a component to malfunction. To prevent overheating, you must also maintain adequate clearance on all sides the unit so that air can circulate.

Continue with the following procedures:

1. Connecting the Monitor on page 121
2. Connecting the Keyboard on page 126
3. Connecting the Printer on page 128

Assembling a Rack-Mount MAP/100P

Figure 25 on page 85 shows a sample 19- by 30-inch commercial cabinet housing three rack-mount MAP/100P units. Each MAP/100P is shown with front bezel removed.
The following sections and graphics contain the information needed to install ferrites, locate key components, and provide proper clearance for the cooling system of the rack-mount MAP/100P.
Rack-Mount MAP/100P Electromagnetic Conductance Reduction Components

Table 22 on page 86 lists the ferrites to be installed on a MAP/100P system that uses the AYC10 Tip/Ring circuit card. Table 23 on page 87 lists the ferrites to be installed on a MAP/100P system that uses the AYC30 Tip/Ring circuit card.

</tbody>
</table>
The MAP/100P Rack-Mount Installation Procedures

The MAP/100P mounts into a 19-inch commercial cabinet. Before beginning, verify the following:

- At least two installers are available to mount the MAP/100P into the rack.
- The cabinet equipment mounting rails are between 28-30 inches deep

2 Assembling the Computer

Assembling a Rack-Mount MAP/100P

Procedure

⚠️ CAUTION:
Verify that the commercial cabinet is secured to the floor before mounting the MAP/100P to prevent accidental tipping.

Note: Use Figure 26 on page 91 as a reference when you perform this procedure.

1 Ensure that you have the required tools:
   ~ Phillips set, large
   ~ Flatblade screwdriver
   ~ Mounting screws and captive clip nuts provided with commercial cabinet

2 Remove the front bezel.

3 Remove the cabinet mounting bracket from the left and right side of the unit (eight screws).

4 Reuse two screws to attach the extension bracket to the unit at the cabinet’s depth dimension.

Note: Adding the extension bracket provides the necessary depth required for the MAP/100P to fit into the cabinet.

5 Fully extend the cabinet slides to the locked-out position.
2 Assembling the Computer

Assembling a Rack-Mount MAP/100P

6 With the aid of another installer supporting the unit, align the front mounting holes of the slide with those on the cabinet.

7 Use two screws to attach the MAP/100P cabinet mounting guide ends to the cabinet.

8 Repeat steps step 3 through step 7 for the other side.

9 Unlock the cabinet slide and check that the unit moves smoothly in and out of the cabinet.

10 Push the unit completely into the rack.

11 Use two screws and captive clip nuts on the front of each corner to secure the unit.

12 Install the front bezel:
   a Open the bezel door.
   b Snap the front bezel spring clips over the 4 ball studs located at each corner of the front panel.
   c Close the bezel door and lock.

</tr>
</tbody>
</table>

**Note:** If your system is equipped with the RAID optional software, the RAID controller circuit card is located in Slot 19/PCI slot 2.
Cooling System for the Rack-Mount MAP/100P

The cooling system for the MAP/100P includes two fans. One fan is located at the to the right of the circuit card cage area on rack-mount units (Figure 27 on page 93). The other cooling fan is located to the left of the circuit card cage area on rack-mount units (Figure 27 on page 93).

The fans maintain air flow in the unit to prevent components from overheating, which can cause a component to malfunction. To prevent overheating, you must also maintain adequate clearance on all sides the unit so that air can circulate.

Continue with the following procedures:
1. Connecting the Monitor on page 121
2. Connecting the Keyboard on page 126
3. Connecting the Printer on page 128

Assembling the MAP/100C

Note: Before you install the MAP/100C in any frame or cabinet, ensure that the frame or cabinet is secured to the floor to prevent accidental tipping.
The MAP/100C is a system normally used for large business, central office-type environments. The following sections and graphics contain the information needed for the following:

- Installing in a 5ESS Switching Equipment Single Bay Frame on page 101
- Installing in a Common ESS Switching Equipment Single Bay Frame on page 107
- Installing the MAP/100C in a Commercial 24-Inch Panel Rack on page 111
- Key Components on the Front of the MAP/100C on page 112
- Key Components on the Back of the MAP/100C on page 115
- Cooling System for MAP/100C on page 121.

**Installing in a 5ESS Switching Equipment Single Bay Frame**

Use the following procedure to install the MAP/100C in a 5ESS Switching Equipment Single Bay Frame with mounting kit ED5D184:

**Note:** If you are installing only one unit in a frame, it is recommended that you install the single unit central to the frame for easier accessibility and better frame stability.
2 Assembling the Computer

1. Locate the left and right mounting ear brackets (A10039 and A10038) and attach them to the side plate of the unit as shown in Figure 32 on page 106.

2. Secure the left and right mounting ear brackets (A10039 and A10038 bracket with four #10 screws.

3. Install C-channel brackets on the 5ESS Switch frame and on the MAP/100C. There are two sets that accompany each unit. The slotted C-channel must be installed onto the frame (Figure 30 on page 104).

Note: These guides aid you in installing in the unit without having to hold it up to secure it to the cabinet.

4. Position the unit by sliding the C-channel brackets located on each side of the unit inside the channel brackets located on each side of the frame.

5. Lift the unit with a mechanical lifting device using the four eye bolts located on the top of the MAP/100C and slide it onto the C-channel brackets in the cabinet so that the mounting ear brackets are against the cabinet uprights.

6. Secure the mounting ear brackets to the cabinet using three #12-24 screws for each bracket.

7. Attach the two cabinet frame dress filler panels (A10070 and A10071) to the frame under the mounting brackets (Figure 29 on page 103).
2 Assembling the Computer

Assembling the MAP/100C

8 Remove and discard the four eye bolts after the unit is secured to the frame.

9 Release the two latches on the front top corners of the unit and slide the unit out the front of the frame to the full extent of the slides.

Note: The unit should lock in place.

Figure 29. Installing Mounting Brackets onto the MAP/100C

10 Install the cable restraint bar on the rear of the unit, using two #10 screws in the bottommost mounting holes (Figure 31 on page 105).
2 Assembling the Computer

11 From the front of the unit, release the slide latching mechanism on the sides of the two top slides while simultaneously pushing in on the unit.

12 Secure the unit into its mounting position with the two latches at the front top corners of the unit.

Note: The 5ESS frame can hold one or two units, depending on the type of application (Figure 32 on page 106).

Figure 30. Installing C-Channel Brackets onto the Frame and the MAP/100C
Figure 31. Installing the Cable Restraint Bar

Locate Cable Restraint Bar 14 and 1/8 inches from top of unit
Figure 32. MAP/100C Units in a 5ESS Cabinet, Front View
Installing in a Common ESS Switching Equipment Single Bay Frame

Use the following procedure to install the MAP/100C in a Common ESS Switching Equipment Single Bay Frame with mounting kit ED5A001:

**Note:** The Common ESS cabinet can hold one, two, or three MAP/100C (Figure 33 on page 109). If you are installing only one MAP/100C, it is recommended you begin installations at the bottom of the frame for better frame stability and earthquake protection.

1. Locate and attach the two support brackets (A10040-B and A10041-B) to the frame (Figure 34 on page 110) beginning with the lowest frame location.
2. Secure the two support brackets (A10040-B and A10041-B) with #12 screws.
3. Locate and attach the left and right mounting ear brackets (A10036-A and A10037-A) to the side plate of the unit (Figure 29 on page 103).
4. Secure the left and right mounting ear brackets (A10036-A and A10037-A) with #10 screws.
5. Position the unit so that lower edge of the mounting ear brackets (A10036-A and A10037-A) rest on top of the support brackets.
6. Use the four eye bolts located on the top of the unit to lift the unit with a mechanical lifting device and fasten them to the frame using three #12-24 screws on each side of the unit.
2 Assembling the Computer

Assembling the MAP/100C

7 Remove and discard the four eye bolts after the unit is secured to the frame.

8 Release the two latches on the front top corners of the unit and slide the unit out the front of the frame to the full extent of the slides.

Note: The unit should lock in place.

9 Install the cable restraint bar on the rear of the unit in the bottommost mounting holes (Figure 31 on page 105).

10 Secure the cable restraint bar with two #10 screws.

11 From the front of the unit, release the slide latching mechanism on the sides of the two top slides while simultaneously pushing in on the unit.

12 Secure the unit into its mounting position with the two latches at the front top corners of the unit.
2 Assembling the Computer

Assembling the MAP/100C

Figure 33. Multiple MAP/100Cs in a Common ESS Open Frame, Front View
Figure 34. Mounting Locations on the Common ESS Frame
Installing the MAP/100C in a Commercial 24-Inch Panel Rack

Use the following procedure to install the MAP/100C in a commercial 24-inch panel rack:

**Note:** If you are installing only one unit in a frame, install the single unit central to the frame for easier access and frame stability.

1. Locate and attach the left and right support brackets (A20096 and A20097) using the hardware recommended by the rack manufacturer.

**Note:** These support brackets are adjustable in length to accommodate 24-, 30-, and 36-in. depths.

2. Position the unit so that the main side plates of the unit rest on top of the support brackets mounted on the rack.

3. Lift the unit with a mechanical lifting device into the rack using the four eye bolts located on the top of the unit.

4. Slide the unit completely into the rack so that the front mounting ears rest against the vertical mounting uprights inside the rack.

5. Fasten the mounting to the rack using the hardware recommended by the manufacturer.

6. Locate and fasten the two cabinet frame dress filler plates to the rack uprights using the hardware recommended by the manufacturer.
2 Assembling the Computer

Assembling the MAP/100C

7 Remove and discard the four eye bolts after the unit is secured to the rack.

8 Release the two latches on the front top corners of the unit and slide the unit out the front of the frame to the full extent of the slides.

Note: The unit should lock in place.

9 Install the cable restraint bar on the rear of the unit in the bottommost mounting holes (Figure 31 on page 105).

10 Secure the cable restraint bar with two #10 screws.

11 From the front of the unit, release the slide latching mechanism on the sides of the two top slides while simultaneously pushing in on the unit.

12 Secure the unit into its mounting position with the two latches at the front top corners of the unit.

Key Components on the Front of the MAP/100C

Use the following sections and diagrams to locate key components on the MAP/100C. For additional information describing the MAP/100C hardware, see the maintenance specific to your platform.

Figure 35 on page 113 shows the front view of the MAP/100C. Table 27 on page 114 provides a description of the components on the front of the MAP/100C.

Cooling System for MAP/100C

Seven cooling fans provide forced-air cooling for the MAP/100C. Two are located in the peripheral drive bay, and four are located in the rear. The seventh fan is located inside the power supply.

The fans maintain air flow in the unit to prevent components from overheating, which can cause a component to malfunction. To prevent overheating, you must also maintain adequate clearance around the unit so that air can circulate.

Continue with the following procedures:
1. Connecting the Monitor on page 121
2. Connecting the Keyboard on page 126
3. Connecting the Printer on page 128

Connecting the Monitor

This section describes how to make the connections between any platform and its monitor.

Note: The AT&T CRT345 monitor is not compatible with the PCI video circuit card.
2 Assembling the Computer

Connecting the Monitor

Table 30 on page 122 contains references to find the location of the video connector and power receptacle that are specific to your platform.

Table 30. Video Connector and Power Receptacle Locations

</table>

One end of the signal cable has a video input connector and the other end is permanently attached to the monitor.

Use the 15-pin, high-density D-subminiature female connector located on the video circuit card faceplate to connect to the monitor.
2  Assembling the Computer

Connecting the Monitor

Procedure for MAP/5P, MAP/40P, and MAP/100C

To connect the monitor cables, do the following:

1. Plug the video cable connector from the monitor directly into the video connector located on the faceplate of the video controller circuit card (Figure 37 on page 124).

2. Tighten the thumb-screws on the video cable connector with your fingers or with a small flat-blade screwdriver.

3. Connect one end of the power cable to the AC power inlet receptacle on the rear of the monitor and the other end into the customer premise grounded outlet.
Procedure for MAP/100P

To connect the monitor cables for the MAP/100P, do the following:

1. Turn the two butterfly screws located on the rear cable support bracket one-quarter turn (Figure 38 on page 126).

2. Open the support bracket.
2 Assembling the Computer

The support bracket will drop down for a rack-mount unit or open right-to-left for a deskside unit.

3 Plug the video cable connector from the monitor directly into the video connector located on the faceplate of the video controller circuit card (Figure 37 on page 124).

4 Tighten the thumb-screws on the video cable connector with your fingers or with a small flat-blade screwdriver.

5 Connect one end of the power cable to the AC power inlet receptacle on the rear of the monitor and the other end of the power cable into the customer premise grounded outlet.

6 Close the rear cable support bracket and lock.

Connecting the Monitor
Connecting the Keyboard

The following information is valid for all platforms (MAP/5P, MAP/40P, MAP/100P, and MAP/100C). A 6-pin, female DIN receptacle is located in the rear of the computer. The male plug is provided with the keyboard. The connector assembly is keyed to provide proper alignment. Figure 39 on page 127 shows the receptacle and plug.
2 Assembling the Computer

Connecting the Keyboard

Connecting the Printer

A 25-pin D-subminiature female receptacle provides a parallel printer interface.

Lucent Technologies recommends and supports the Okidata 320 printer for connection to the system. Use the instructions supplied in the manufacturer’s manual, *Users’ Guide Okidata 320 Printer*, or the manual provided with your printer to unpack and install your printer. The following installation overview supplements the information provided in the printer guide.

1. Unpack your printer according to the steps provided in the printer guide.
2. Install the ribbon cassette and paper as shown in your printer guide.
3. Ensure that the ON-OFF switch of the printer is OFF.

2 Assembling the Computer

4 Set the options as described in your printer guide.

Note: The CONVERSANT system works with the default settings for the 320 printer.

5 Connect the AC power cable to your printer.

6 If your printer has a self-test feature, plug the AC power cable into a grounded wall outlet and initiate the self test by following the instructions in the printer guide. When the self-test is completed, turn the printer off and disconnect the power cable from the wall outlet.

   If your printer does not have a self-test feature, skip this step. Continue with Step 7.

7 Insert the male end of your cable into the 25-pin female parallel port connector.

8 Fasten the screws.

9 Insert the other end of your cable to the parallel port on your printer.

10 Depending on your type of printer connection, either tighten the thumb-screws or press the two wire-retaining clips together until you hear them click into the lock slots on either side of the plug.

11 Plug the AC power cable into a grounded wall outlet.

Configuring a Local Parallel Printer

Lucent Technologies supports the following two parallel printers for connection to the system:

- Okidata 320
- Okidata Laser

Contact your local Lucent Technologies representative if you want to connect a serial printer to the system.

Configuring the Okidata 320 Printer

To configure the Okidata 320 printer, do the following:

1. Log in as root.
2. Enter `cvis_menu`

   The system displays the Voice System Administration menu (Figure 40 on page 132).
3 Select

> UNIX Management

> Printer Administration

> Install Okidata 320 Printer Software

4 Press **ENTER**.

5 Press **F3** (Save).

6 Press **F6** (Cancel) until you return to the Voice System Administration menu (Figure 40 on page 132).
To configure the Okidata Laser printer, do the following:

1. Log in as root.

2. Enter `cvis_menu`
   - The system displays the Voice System Administration menu (Figure 40 on page 132).

3. Select

   ![Menu Diagram]

   - UNIX Management
   - Printer Administration
   - Install Okidata Laser Printer Software

4. Press Enter.

5. Press F3 (Save).

6. Press F6 (Cancel) until you return to the Voice System Administration menu (Figure 40 on page 132).
Overview

The chapter provides the information to make cable connections and to power-up the system installation successfully.

The system supports circuit cards (Table 33 on page 135) that provide various functions. These circuit cards include video controls, peripheral controls, communication controls, central processing unit (CPU), and Tip/Ring.
Circuit cards are placed in the system in locations called slots. This chapter serves as an introduction to connecting cables to the faceplates of circuit cards that are installed in the system. It also includes general steps for making cable connections, but additional steps may be required for some cable connections.

See Appendix B, Cable Connectivity, for more detailed information.
Connecting the Tip/Ring Circuit Card

The Tip/Ring circuit cards (Table 34 on page 136) provide the channels used by the Intuity CONVERSANT system. There are six channels on each Tip/Ring circuit card.

Table 34. Tip/Ring Circuit Cards Supported

<table>
<thead>
<tr>

| MAP/40P  | • IVC6 (AYC10)  
          • NGTR (AYC30) | Up to eight      |
| MAP/100P | • IVC6 (AYC10)  
          • NGTR (AYC30) | Up to twelve     |
| MAP/100C | • IVC6 (AYC10)  
          • NGTR (AYC30) | Up to twelve     |
3 Making Cable Connections

Connecting the Tip/Ring Circuit Card

The Tip/Ring circuit cards use two 6-pin-conductor modular cords. These cords provide three lines for telephone hook-up. You can connect the Tip/Ring circuit card to telephone lines in one of three ways:

- Direct cable connection from the circuit card to the telephone line
- Cable connection from the circuit card through a line splitter and then to the telephone line
- Cable connection using a Tip/Ring distribution panel or hardware to the telephone line for use with the MAP/40P, MAP/100P, and MAP/100C

**Direct Cable Connection**

When you use a two-conductor modular cord to make a direct connection from either of the two Tip/Ring circuit card jacks to the telephone line, only line 1 or line 4 of the three telephone lines is connected.

*Figure 41 on page 138* shows a typical direct Tip/Ring line connection for the AYC10 (IVC6) Tip/Ring circuit card.
Figure 41. Direct Line Connection from AYC10 (IVC6) Tip/Ring Circuit Card

To network

Miniature 6-position jack

Miniature 6-position plug

To registered terminal equipment

RJ25C – Surface- or flush-mounted jack

Mechanical arrangement: miniature 6-position jack
Cable Connection Using a Line Splitter

Adapters or line splitters enable you to use multiple channels in modular cords.

885A Adapter

Using the 885A adapter or line splitter (Figure 43 on page 141) to connect the IVC6 Tip/Ring circuit card to the telephone line enables you to use all three channels in the 6-pin conductor modular cord.

Note: Be sure to record the circuit card slot number and telephone extension numbers on the adapter.
356B Adapter

Using the 356B adapter or line splitter (Figure 44 on page 142) to connect the IVC6 Tip/Ring circuit card to the telephone line enables you to use eight 6-pin conductor modular cords.

1. AYC10 faceplate
2. Interconnects RJ25C between AYC10 and 885A adapter
3. Connect to RJ11 on customer premise equipment
3 Making Cable Connections Connecting the Tip/Ring Circuit Card

Note: Be sure to record the circuit card slot number and telephone extension numbers on the adapter.

Note: The 356B adapter is not used with the MAP/5P.

Cable Connection Using the Tip/Ring Distribution Panel for the MAP/40P and MAP/100C

The Tip/Ring distribution panel (Figure 45 on page 144) is located on the back of the MAP/40P and MAP/100C. This panel allows you to connect a maximum of 42 channels (up to seven Tip/Ring circuit cards).

Table 35 on page 145 provides the numbering scheme for connecting the short modular cords provided with the Tip/Ring cards to the panel. Use this information, the channel numbers on the Tip/Ring circuit cards, and the number of Tip/Ring circuit cards in the system to connect the Tip/Ring circuit card modular jacks to the appropriate jacks on the Tip/Ring distribution panel.

Note: The Tip/Ring distribution panel is not used with the MAP/5P and MAP/100P.
3 Making Cable Connections

Connecting the Tip/Ring Circuit Card

Figure 45. Tip/Ring Distribution Panel for MAP/40P and MAP/100C

To connect the panel:

1. Insert the modular cord into the appropriate jack.

2. Remove any slack in the cable on the back of the unit by dressing it so that it is stored in the area above the distribution panel.

Note: Use cable ties, if necessary, to dress the cables neatly.

3. Make telephone line connections to the computer with the 25-foot 50-conductor shielded cable(s) equipped with USOC RJ21X connections.

Cable Connection Using the Tip/Ring Distribution Hardware for the MAP/100P

The Tip/Ring distribution hardware (Figure 44 on page 142) consists of:

- A 356B adapter
- Adapter mounting support clips
- A 25-pair, high-density cable for the first 24 channels

Note: An additional 25-pair, high-density cable is required for the second 24 channels to be supported by the distribution panel. Therefore,
if you are connecting 48 channels, you will need another cable that is not part of this kit.

**Note:** Two kits will have to be purchased to accommodate all 64 channels.

Adapters or line splitters enable you to use multiple channels in modular cords.

The Tip/Ring distribution hardware attaches to the rear bracket on the deskside MAP/100P ([Figure 46 on page 148](#)) and the rack-mount MAP/100P ([Figure 47 on page 149](#)).
Figure 46. Tip/Ring Distribution Hardware on Deskside MAP/100P
Figure 47. Tip/Ring Distribution Hardware on Rack-Mount MAP/100P
Installing the Tip/Ring Distribution Hardware on the MAP/100P

**Note:** Record the circuit card slot number and telephone extension numbers on the adapter.

To install the Tip/Ring distribution hardware, do the following:

1. Verify that the distribution hardware is on site and appears to be in usable condition.
2. Verify that all of the necessary components are included (Figure 44 on page 142).
3. Secure the u-shaped adapter support clips to the mounting plate on the rear of the MAP/100P with the screws provided (Figure 46 on page 148).

The u-shape of the bracket is mounted differently on the deskside configuration of the MAP/100P (Figure 48 on page 151) than on the rack-mounted configuration (Figure 47 on page 149).
3 Making Cable Connections

Connecting the Tip/Ring Circuit Card

Figure 48. Tip/Ring Distribution Hardware Orientation for Deskside MAP/100P

4 Plug the 16-inch, 6-pin modular cords (H600 - 488, Group 1) from the Tip/Ring circuit cards into the 356B adapters. Each adapter can accommodate up to eight modular cords (Figure 44 on page 142).

Note: Use the 6-foot modular cord provided with each circuit card if the customer provisioned the Tip/Ring analog line terminations.
Using the connector provided, attach the 25-pair, high-density cable to the 356B adapter.

Snap the 356B adapters into the adapter bracket. Ensure the modular cords are inside, at the bottom of the adapter clip.

**Note:** The 356B adapters can be removed by spreading the bracket sides apart.

**CAUTION:**
The 25-pair, high-density cables will dress down from the adapter brackets in a deskside configuration. The cables will dress to either side of the MAP/100P in a rack-mounted configuration.

**Note:** In a properly installed rack-mount configuration, the 25-pair Tip/Ring cables will crisscross and tie into the rear cabinet corner. This reduces stress on the connectors and diminishes interference when pulling the shelf forward.

Secure the 25-pair cable connector hood to the adapter bracket using two 8-inch cable ties.

Connect the grounding wire located on the end of the adapter bracket.

Table 36 on page 153 shows the numbering scheme for connecting the short modular cords provided with the Tip/Ring cards to the Tip/Ring distribution panel.

Connecting Asynchronous Devices

There are two ways to connect the computer to a terminal, modem, or other DTE or DCE device via an asynchronous link:

- Using COM1
- Using the additional asynchronous ports on the asynchronous SuperSerial circuit card

**Note:** The computer provides two asynchronous ports, COM1 and COM2. However, COM2 is reserved for remote maintenance by Lucent Technologies personnel and is not available for asynchronous connections.

**Using COM1**

A 9-pin D subminiature male connector is provided on the rear of the unit for COM1. See [Table 37 on page 168](#) for COM1 locations specific to your platform.
COM1 supports asynchronous host connections running at 300 to 19,200 baud. Networking modems typically use the 19,200 baud rate.

**COM1 Pinouts**

Table 38 on page 169 lists the pinouts for the COM1 asynchronous port on the rear of the computer.
Asynchronous SuperSerial Circuit Card

The asynchronous circuit card allows you to connect the Intuity CONVERSANT System to external peripheral equipment. An octopus cable is shipped with the circuit card and connects to the circuit card faceplate. See Table 38.

</table>
Figure 80 on page 255 through Figure 84 on page 259 in Appendix B, Cable Connectivity for illustrations.

Figure 49 on page 170 shows the asynchronous SuperSerial circuit card.

**Note:** If you are installing the asynchronous SuperSerial circuit card, the system cannot be equipped with the 8-Port Asynchronous Megaport circuit card.

**Figure 49. Asynchronous SuperSerial Circuit Card**
3  Making Cable Connections

Connecting the FIFO/SIB Synchronous Host

The system supports one FIFO/SIB synchronous host circuit card on the MAP/5P and up to two FIFO/SIB synchronous host circuit cards on the MAP/40P, MAP/100P and MAP/100C. Figure 50 on page 171 displays the FIFO/SIB synchronous host circuit card connector.

Figure 50. FIFO/SIB Synchronous Host Circuit Card Connector
Data links between the platform and the host computer are made using a shielded RS-232 cable. This cable extends from the Synchronous Host circuit card port on the rear of the unit and connects to host equipment.

**Note:** All cables should be shielded. You should use limited-distance modems when data links exceed 100 ft.

**Connecting the LAN Circuit Card**

The CONVERSANT system for new installation supports PCI Ethernet LAN circuit cards. The type of cable you use to connect the Ethernet LAN circuit card to the customer’s LAN depends on the connection already in use for the LAN. This cable connection can be one of three types:

- Thin Ethernet (BNC)
- Thick Ethernet (AUI)
- 8-pin modular connector (Tbase or twisted pair)

⚠️ **CAUTION:**

Do NOT cable the Ethernet LAN circuit card before you power up. Doing so can disturb the customer’s existing LAN.
Making Cable Connections

Connecting the LAN Circuit Card

The system supports two versions of the PCI Ethernet LAN circuit card:

- SMC8432
- SMC9332

SMC8432 Circuit Card

The SMC8432 ethernet LAN circuit card is a 10-Mbps circuit card. Figure 51 on page 173 shows the SMC8432 Ethernet LAN circuit card connector.

Figure 51. SMC8432 Ethernet LAN Circuit Card Connector
SMC9332 Circuit Card

The SMC9332 Ethernet LAN circuit card is a 10/100-Mbps circuit card. Figure 52 on page 174 shows the SMC9332 Ethernet LAN circuit card connector.

Figure 52. SMC9332 Ethernet LAN Circuit Card Connector
Connecting Standard Circuit Cards

⚠️ CAUTION:
Observe proper electrostatic discharge precautions when you handle computer components. Wear an antistatic wrist strap that touches your bare skin and connect the strap cable to an earth ground.

This section provides the cable connectivity information for the CPU circuit cards that are included with every system.

External SCSI Connector Circuit Card

Note: The external SCSI connector circuit card is not available on the MAP/100P.

The external SCSI connector circuit card (Figure 53 on page 176) provides an external SCSI connector and an active termination for the SCSI bus. There is only one external SCSI connector circuit card installed on the system. The external SCSI connector resides in the faceplate.
Figure 53. External SCSI Connector Circuit Card and Active Terminator

1. External SCSI interface connector
2. Mouse interface connector
3. External SCSI active terminator

The external active terminator requires considerable force to insert. Insert it into the external SCSI adaptor before installing the adapter. This allows you to examine and straighten the faceplate, if necessary, so that electromagnetic
compatibility will be maintained (FCC Part 15). The active terminator must remain on the external SCSI connector circuit card whenever the system is in operation.

**Remote Maintenance Circuit Card**

The remote maintenance circuit card enables remote diagnostics of basic system components ([Figure 54 on page 177](#)). There is one remote maintenance circuit card installed on the system.

**Figure 54. Remote Maintenance Circuit Card**
### Types of Remote Maintenance Circuit Cards

The Lucent Intuity system supports remote maintenance circuit cards:

- With an internal modem (AYC54)
- Without an internal modem (AYC55)

You can determine the type of remote maintenance circuit card installed on your system by viewing the faceplate. Figure 55 on page 179 shows the faceplate of a remote maintenance circuit card with an internal modem (AYC54).

**Note:** The AYC54 remote maintenance circuit card can be connected to an external modem.
Figure 55. AYC54 Remote Maintenance Circuit Card Faceplate

Figure 56 on page 180 shows the faceplate of a remote maintenance circuit card without an internal modem (AYC55).
3 Making Cable Connections

Connecting Standard Circuit Cards

Setting the Resource Options

The remote maintenance circuit card is equipped with a BEC enable switch (Figure 55 on page 179). Ensure that this switch is set to the ON position (Figure 57 on page 181).
Digital Connections for MAP/40P, MAP/100P, and MAP/100C

A digital T1 (E&M) or E1 (CAS) circuit (trunk) allows the system to connect to digital network facilities such as a central office (CO) switch. Digital connections between a DEFINITY® switch and the system can be through PRI, T1 (E&M), E1 (CAS), line-side T1, or line-side E1.

E1 or LSE1 reduces the required hardware to only one E1 circuit card (and part an SSP circuit card). T1 or LST1 requires one T1 circuit card (and part of an SSP circuit card) per 24 channels of digital service.

The AYC21 circuit card may be used for either E1 or T1 services.
Central Office Connection—E1/T1 Circuit Cards

For new system installations, the system supports the AYC21 E1/T1 circuit cards.

You can connect the E1/T1 circuit card to the standard T1 carrier directly to a DS1 terminal block or through the following types of customer premise equipment:

- Channel service unit (CSU)
- Automatic call distributor (ACD)
- Private branch exchange (PBX)

You *must* use a CSU if any of the following situations applies to your system setup:

- The system is more than 200 meters (655 ft.) from the signal source. The signal source may be a DSX or the last T1 repeater. In this case, the CSU regenerates the received signal and properly attenuates the transmitted signal to prevent crosstalk.
- The system is terminating the T1 trunk from outside the building. In this situation, the CSU provides the primary lightning and surge protection as required by FCC Part 68.
- The T1 loop is powered by either 110 VAC or +24 or -48 VDC sources.
You want to use the remote loopback or extended super frame maintenance features. In this case, the CSU recognizes the in-band bit patterns that signal it to loop back the incoming signal or to perform other maintenance functions.

### Connecting T1 Circuit Cards to a CSU

On some types of CSUs, the connector on the T1 cable plugs into the AYC21 circuit card and the cable terminates at a 15-pin D subminiature connector to the CSU.

On other types, you must cut off the CSU connector and slide latch and strip and connect the wires. Figure 58 on page 184 displays the AYC21 circuit card connection.
Figure 58. AYC21 Circuit Card Connection

- **SW1**: (device number)
- **SW2**: (operating mode)
- **Test port**: (lab use only)
- **TDM bus B**: (reserved for future use)

Powering Up the System

Verify the intake voltage before you power up the system. Before connecting the AC power, use the references in Table 39 on page 185 to verify that the computer will accommodate the appropriate intake voltage:

Table 39. Intake Voltages

Connecting the System to the AC Power Supply

Complete the following procedure to ensure that the system is connected properly to the power outlet and is receiving power.

**Note:** You must provide a dedicated AC line for the unit.

1. Plug one end of the power cord into the AC power supply input on the back of the unit.

2. Use a cable tie to attach the power cord to the grillwork at the rear of the computer.

**Note:** Allow some slack in the power cord when using the cable tie. Do not stretch the power cord.

3. Plug the other end of the power cord into the designated power outlet.

4. Place the power switch for the monitor in the ON position.
5 Turn on the power switch on the unit.

- The green LED power indicator on the front of the unit comes on and resident diagnostics are initiated on the monitor.
- A green or amber lamp on the front bottom, screen-base area of the monitor also comes on.

**Note:** If the monitor lamp does not come on or if diagnostics do not initiate on the monitor screen, recheck the power connections. For more information on the power supply requirements, see System Installation Checklist, and Power Requirements in Chapter 1, Getting Started.
4 Completing System Installation

Overview

The information in this chapter is designed to help you complete the system installation and ensure that the system is fully operational by verifying the licensing for controlled applications, verifying the feature options installed, and connecting peripherals. The procedures covered include:

- Registering Your System on page 189
- Connecting a Modem on page 189
- Verifying Controlled Applications on page 209
- Feature Test Script Package on page 213

A procedure is also provided to activate the Remote Alarming so that technicians in the remote maintenance service center receive notice if the system experiences difficulty:

- Activating Alarm Origination on page 224

A reference is provided to the backup procedures to baseline the system:

- Baselining the Intuity CONVERSANT System on page 231
Registering Your System

Before you configure your modem, call your remote maintenance service center to register your system. When you call have the following information available:

- The serial number of your computer (from the chassis)
- Your order number information (from the factory work order)
- The telephone number you will use for your remote maintenance modem

Connecting a Modem

A modem connects:

- To the 8-port asynchronous circuit card or COM1 to enable remote access
- To COM2 to enable remote login for Lucent Technologies’ maintenance
- Between a remote terminal and the network at a remote site
Connecting the 3820 and U.S. Robotics Modems

The Paradyne 3820 and the U.S. Robotics modems are the only modems supported for connection to COM2. COM2 is reserved for Lucent remote maintenance. Complete the procedures in this section to install the 3820 modem.

To connect the 3820 modem to the hardware platform:

1. Connect a 9-to 25-pin adapter to the 9-pin COM2 port.

2. Use a 25-to 9-pin adapter to complete the connection between the 9-pin COM2 port and the 9-pin modular cable that comes with the 3820 modem. Connect the 9-to 25-pin adapter to the 25-9 pin adapter and then connect the 25-9 pin adapter to the 9-pin modular cable.

3. Plug the 9-pin modular cable into the 3820 modem.

Once connected, RTS, CTS, and LSD on the 3820 modem should be on.

Note: If you are using the modem for anything other than remote maintenance, use the RS-232 adapter marked as DTE and the octopus cable to connect to the ports on the asynchronous SuperSerial circuit card and the 3820 modem.
Connecting the U.S. Robotics Modem to the Platform

To connect the U.S. Robotics modem to the hardware platform:

1. Connect one end of a 9-to 25-pin cable to the 9-pin COM2 port on the chassis.
2. Connect the other end of the 9-to 25-pin cable to the U.S. Robotics modem.
   
   Once connected, AA, TR, and CS on the U.S. Robotics modem should be on.

Configuring the Modem

To configure a modem, do the following:

1. Log in as root.
2. Enter cvis_menu
3. The system displays the Voice System Administration menu (Figure 59 on page 192).
4 Select:

>UNIX Management

>Modem/Terminal Administration

>Install Modem/Terminal Software

5 Press ENTER.
The system displays the Install Modem/Terminal Window (Figure 60 on page 193).

**Figure 60. Install Modem/Terminal Window**

1. Enter `modem` in the **Device:** field.
2. Enter `/dev/tty00` in the **Serial Port Number:** field.
3. Enter `19200` in the **Speed:** field.
4. Press F3 (Save).
5. Press F6 (Cancel) until you return to the Voice System Administration menu (Figure 59 on page 192).

Use the procedures in the following sections to configure the 3820 modem via its control panel. Once configured, follow instructions to save the configuration so that if the modem loses power, you will not need to repeat these configuration steps.
The configuration process can be divided into the following procedures:

- Selecting the UNIX dial default factory configuration
- Setting the Async DTE rate to the required speed
- Setting the DTR action and the DSR control to standard RS-232
- Setting the error control mode to buffer mode

**Using the Diagnostic Control Panel on the 3820 Modem**

The 3820 modem has a Diagnostic Control Panel (DCP) which is the user interface to the modem. Table 40 on page 194 shows how to use the keys on the DCP.

**Table 40. Key Functions on the 3820 Modem Diagnostic Control Panel**

<table>

Selecting the UNIX Dial Default Factory Configuration

**Note:** Press ▶ to scroll forward and ◄ to scroll backward.

To select and save the “UNIX Dial” default factory setting to the “Active (Saved)” configuration area, complete the following procedure:

1. Turn the modem off and then back on.
2. Press ▶ or ◄ on the DCP to display Configure.
3. Press the function key below Configure to select the Configure branch of the menu.
   
   The LCD displays the following message:
   
   Ld EditArea frm.
4. Press ▶ or ◄ to display Factory.
5. Press F1 to display the factory preset configuration.
   
   The LCD displays the following message:
   
   LD Fact Preset:
6. Press ▶ or ◄ to display Unix Dial.
7. Press the function key below Unix Dial to select the “Unix Dial” default factory setting.
The LCD displays the following message:
Choose Function
Edit and Save.

8 Press F3 (Save).
The LCD displays the following message:
Sav EditArea to
Active (Saved).

9 Press F1 Active (Save) area.
The LCD displays the following message:
Command Complete.

10 Press ▲ to return to the top-level menu.

Setting the Async DTE Rate to the Required Speed on the 3820 Modem
To set the Async DTE rate to the required speed, complete the following procedure:

1 Press ▼ or ▲ on the DCP to display Configure.

2 Press the function key below Configure to select the “Configure” branch of the menu.
4 Completing System Installation

Connecting a Modem

The LCD displays the following message:
Ld EditArea frm.

3 Press [▲] or [▼] to display Active (Saved).

4 Press F1 to select the “Active (Saved)” configuration area.

The LCD displays the following message:
Choose Function
Edit and Save.

5 Press F1 (Edit) to edit the “Active (Saved)” configuration area.

LCD displays the following message:
Edit StrapGroup
DTE Interface.

6 Press F1 to edit the DTE Interface.

The LCD displays the following message:
Async/Sync Mode.

7 Press F2 (Nxt) to display Async DTE Rate.
4 Completing System Installation

Connecting a Modem

8 Press or until the desired speed comes into view.

Note: The desired speed for networking is 19,200 baud. The desired speed for administration is 9600 baud.

The LCD displays the desired speed.

9 Press F2 to set the Async DTE Rate, when the desired speed comes into view.

10 Continue with the next procedure, Setting the DTR Action and DSR Control to Standard RS-232 on the 3820 Modem on page 198. Do not return to the top-level menu.

Setting the DTR Action and DSR Control to Standard RS-232 on the 3820 Modem

To set the DTR action to standard RS-232 on the 3820 modem, begin Step 1 of this procedure directly from the ending step of the previous procedure.

1 Press F1 (Nxt), more than once if necessary, to display DTR Action.

2 Press or to display Stndrd_RS-23.

3 Press F2 to set the DTR Action.

4 Press F1 (Nxt) to display DSR Control.

5 Press or to display Stndrd_RS-232.

6 Press F2 to set the DSR control.
Completing System Installation

Connecting a Modem

7 Press the single .
   LCD displays the following message:
   Edit StrapGroup
8 Press or  to display DTE Dialer.
9 Press F1 (Edit).
   LCD displays the following message:
   DTE Dialer Type
10 Press F1 (Next) to display AT Escape Char.
11 Use or  and F2 (Select) to adjust the number to 128 ASCII.
12 Press .
   LCD displays the following message:
   Edit StrapGroup
13 Press or  to display Dial Line.
14 Press F1 (Edit).
   LCD displays the following message:
   Dial Line Rate
15 Press  or  to display baud rates.

Note: The recommended speed for remote administration is 9,600 baud.

16 Press F2 (Select).

The LCD displays the baud rate.

17 Press the single .

The LCD displays the following message:

Edit StrapGroup

18 Continue with the next procedure, Setting the Error Control Mode to Buffer Mode on the 3820 Modem on page 200. Do not return to the top-level menu.

Setting the Error Control Mode to Buffer Mode on the 3820 Modem

Use the procedure below to set the error control mode to buffer mode:

1 Press  or  to display V42/MNP/Buffer.

2 Press F1 to edit V42/MNP/Buffer.

The LCD displays the following message:

Err Control Mode

3 Press  or  to display BufferMode.
4 Press F2 (Select).
5 Press F1 (Next) to display Flw Cntl of DTE.
6 Press \(\rightarrow\) or \(\leftarrow\) to display CTS_to_DTE.
7 Press F2 (Select).
8 Press \(\uparrow\). 
   LCD displays the following message:
   Edit StrapGroup
9 Press \(\uparrow\). 
   LCD displays the following message:
   Choose Function
   Edit and Save
10 Press F3 (Save). 
   LCD displays the following message:
   Sav EditArea to
   Active
4 Completing System Installation

Connecting a Modem

11 Press F1.
   LCD displays the following message:
   Command Complete

12 Press A to return to the top-level menu.

Configuring the 3820 Modem via a Terminal

Use the following procedure to configure the 3820 via a terminal rather than on the control panel of the modem.

1 Connect a terminal to the 3820 modem.
2 Refer to the documentation provided with the terminal and make sure that the terminal is acting as a DTE.
3 Set the terminal line to 8 bits, no parity, and 1 stop bit.
4 Set the baud rate of the terminal line to the required modem speed.
   For example, for the 3820 modem attached to the remote maintenance port, set the terminal line to a baud rate of 9600.
5 Enter AT on the terminal.
   Modem response:
   OK
4 Completing System Installation

Connecting a Modem

**Note:** If the modem does not return OK, the modem is unable to accept AT commands from the terminal. Check the connection and the terminal setup.

6 Enter the following AT command:

```
AT&T&F3L0&D2&S1\N0\Q3S41= dial_line_rate S2=128&W0
```

where `dial_line_rate` is one of the following values:

- 3=9600
- 5=4800
- 6=2400
- 7=1200 (V.22)
- 8=1200 (212A)
- 20=19200

For example, to set the 3820 modem to user COM2, where the baud rate is 9600, enter 3 as the `dial_line_rate` as shown below:

```
AT&T&F3L0&D2&S1\N0\Q3S41=3S2=128&W0
```

Modem response:

```
OK
```
Completing System Installation

7 Disconnect the terminal.
8 Connect the modem to the communication port (COM port 1 or 2).
   The system activates the RTS, CTS, and LSD indicators.

Connecting a Modem

Configuring the U.S. Robotics Modem Through a Terminal

Use the following procedure to configure the U.S. Robotics through a terminal:
1 Connect a terminal to the U.S. Robotics modem.
2 Refer to the documentation provided with the terminal and make sure that the terminal is acting as a DTE.
3 Set the terminal line to 8 bits, no parity, and 1 stop bit.
4 Set the baud rate of the terminal line to the required modem speed.
   For example, for the U.S. Robotics modem attached to the remote maintenance port, set the terminal line to a baud rate of 9600.
5 Enter AT on the terminal.
   Modem response:
   OK
   
   Note: If the modem does not return OK, the modem is unable to accept AT commands from the terminal. Check the connection and the terminal setup.
**Completing System Installation**

6 Enter the following AT command:
   
   AT&F1&D2&B0&S1S0=1S2=128&W0
   
   Modem response:
   
   OK

7 Disconnect the terminal.

8 Connect the modem to the communication port (COM port 1 or 2).
   
   The system activates the AA, TR, and CS indicators.

**Connecting the 7400A Data Module**

You can use the 7400A data module for connections to a distant modem or terminal to establish a data call or for remote administration. If doing so, connect the 7400A data module to either COM1 or to any of the eight ports on the 8-port asynchronous circuit card.

**Setting up a Terminal to Log In Remotely to the Lucent Intuity System via a 7400A Data Module**

Use the documentation associated with your terminal and the following procedure:

1 Set the terminal line to 8 bits, no parity, and 1 stop bit.

2 Set the terminal line speed to the same as that of the modem to which the terminal is connected.
4 Completing System Installation

Connecting a Modem

Setting Up the Hardware on the 7400A Data Module

Note: Make sure the EIA connector circuit card (located under the top panel of the 7400A data module) is set to DCE. If it is not, unplug the circuit card and turn it to the DCE setting.

Connecting the 7400A to COM1
Use the following procedure to connect the 7400A data module to COM1. See Appendix B, Cable Connectivity, for illustrations and additional information.

1 Attach a 9- to 25-pin adapter to COM1.
2 Attach an RS-232 cable to the adapter on COM1.
3 Attach the other end of the RS-232 cable to the 7400A data module.
4 Make the remaining connections.

Connecting the 7400A Data Module to the Asynchronous SuperSerial Circuit Card
Use the following procedure to connect the 7400A data module to the asynchronous SuperSerial circuit card. See Appendix B, Cable Connectivity, for illustrations and additional information.

1 Attach the single end of the octopus cable to the SuperSerial circuit card.
2 Attach one of the tentacles of the octopus cable to 25-pin modular adapter.
4 Completing System Installation  

3 Connect the 25-pin modular adapter to a DTE adapter.
4 Connect the DTE adapter to the 7400A data module.
5 Make the remaining connections.

Testing the Hardware Connections and Setup

To verify that you have the hardware connections and the setup completed correctly, perform the following test:

1 Power up the computer. See Powering Up the System in Chapter 3, Making Cable Connections and Power-Up the System.
2 Plug an RS-232 mini-tester into the COM2 port.
   If the connections and setup are correct, DTR, RTS, and TD on the tester will light.
3 If the test fails, recheck the connections and setup.

Completing Setup on the 7400A Data Module

Set the options and interface baud rate on the 7400A data module. See Table 41 on page 208 and “Using the Front Panel” in the 7400A Data Module User’s Manual, 555-020-706, for details.

In the set interface option menu, set the ANS ONLY? option to YES. Then select the other options as listed in Table 41 on page 208.

Verifying Controlled Applications

Access to certain features is controlled by feature licensing limits. The voice system keeps track of the total number of licenses purchased and currently in use for an application.

**Note:** Contact your remote maintenance service center to modify license values.

### Viewing Feature License Values

To view all of the applications controlled by feature licensing:

1. Log in as `root`.
2. Enter `cvis_menu`
The system displays the Voice System Administration menu (Figure 61 on page 210).

Figure 61. Voice System Administration menu

3 Select:

> Configuration Management

> Feature Licensing

4 Press ENTER.

The system displays the Display Feature Licensing screen (Figure 62 on page 211).
To update the list of features, press **F8** (Actions).

The system displays the Actions menu ([Figure 63 on page 211](#)).

**Figure 63. Actions Menu**

```plaintext
Actions
Print
Update

>Update
```
7 Press ENTER.
   The system refreshes the Display Feature Licensing screen (Figure 62 on page 211).

8 To print a copy of the Display Feature Licensing screen, press F8 (Actions).
   The system displays the Actions menu (Figure 63 on page 211).

9 Select

   >Print

10 Press ENTER.
   The system prints a copy of the Display Feature Licensing screen (Figure 62 on page 211).
Feature Test Script Package

Use the Feature Test Script package to verify the following features and capabilities of the voice system:

- Playback and coding
- Chantst
- Transfer test

This script works on Tip/Ring channels.

Feature Test Script Package Prerequisites

The required voice system and PBX configurations for testing features are listed below. All lines from the PBX must be configured and operational before running the script to test features. Playback and coding, chantst, and transfer test require at least one Tip/Ring channel.

- Playback and coding
  - At least one Tip/Ring circuit card must be installed.
  - Tip/Ring lines must be in the INSERV state.
  - There must be room on the speech disk slice to store a 45-second phrase.
Completing System Installation

Chantst
- At least one Tip/Ring circuit card must be installed.
- Tip/Ring lines must be in the INSERV state.
- Circuit cards can only have terminating resistors at each end of the bus ribbon cable. All Tip/Ring cards that are not on the bus ribbon cable must not contain terminating resistors.

Transfer test
- At least one Tip/Ring circuit card must be installed.
- Tip/Ring lines must be in the INSERV state.
- Circuit cards can only have terminating resistors at each end of the bus ribbon cable. Any Tip/Ring cards that are not on the bus ribbon cable must not contain terminating resistors.
- The lines coming from the switch or PBX must be configured for both incoming and outgoing calls.
Setting Up the Feature Test Script Package

To set up the Feature Test Script package:

1. Start at the Voice System Administration menu (Figure 61 on page 210) and select:

   - Configuration Management
   - Voice Equipment
   - Display Equipment

   The system displays the Display Voice Equipment screen (Figure 64 on page 216).
2 Press **F3** (Next Page) until you find a channel (in the **CHN** column) that has a state of INSERV.

3 Save the INSERV channel number to enter in step 6 of this procedure.

**Note:** If no channels are in the INSERV state, continue with Changing the State of Voice Equipment on page 222.

4 Press **F6** (Cancel) twice to return to the Configuration Management menu (Figure 65 on page 217).
Figure 65. Configuration Management Menu

The system displays the Assign Channel Service screen (Figure 66 on page 218).
4 Completing System Installation

Figure 66. Assign Channel Service Screen

6 Enter the number of the INSERV channel, from step 3 in Setting Up the Feature Test Script Package on page 215 in the Channel Numbers: field.

7 Press \( Y \) to move to the Service Name: field.

8 Enter feature_tst

9 Press F3 (Save).

The system displays the following message:

Hit acknowledge key to continue

10 Press F1 (Acknowledge)

11 Press F6 (Cancel) four times to return to the Configuration Management menu (Figure 65 on page 217).
12 Select:

```
>Voice Equipment
```

The system displays the Display Voice Equipment screen (Figure 64 on page 216).

13 Check the channel you just assigned. Verify that feature_tst appears in the SERVICE-NAME column.

**Note:** If feature_tst is not displayed, repeat step 4 through step 13.

14 Press F6 (Cancel) to return to the Voice System Administration menu (Figure 61 on page 210).

15 If you need to change the state of voice equipment, go to Changing the State of Voice Equipment on page 222, otherwise, continue with Running the Feature Test Script Package on page 219.

### Running the Feature Test Script Package

**Note:** See Feature Test Script Package Prerequisites on page 213 before using feature_tst.
To run the Feature Test Script package:

1. Start at the Voice System Administration menu ([Figure 61 on page 210](#)) and select

```
>System Monitor
```

The system displays the System Monitor-Voice Channels screen ([Figure 67 on page 220](#)).

Figure 67. System Monitor-Voice Channels Screen

Completing System Installation

Feature Test Script Package

2 Press 7 until the channel number you assigned is displayed in the System Monitor-Voice Channels Screen (Figure 67 on page 220).

3 Dial the telephone number associated with the assigned channel.

Note: The touch tones on the telephone are used to access feature_tst.

The voice system plays the following:

“Follow all touchtone entries with pound. Continue testing.
To quit the script, enter 0 pound.”

The voice system then plays the list of features with the corresponding number to enter to test each feature.

4 Select a feature using the telephone’s touch tone pad.

5 Press the number that corresponds to the feature you want to test and then press #.

6 Follow the prompts to complete the test for each selected feature.
Changing the State of Voice Equipment

To change the state of voice equipment:

1. Start at the Voice System Administration menu (Figure 61 on page 210) and select:

   > Configuration Management
   > Voice Equipment
   > Equipment State

   The system displays the Change State of Voice Equipment screen (Figure 68 on page 222).

Figure 68. Change State of Voice Equipment Screen

<table>
<thead>
<tr>
<th>Change State of Voice Equipment</th>
</tr>
</thead>
<tbody>
<tr>
<td>New State: ________</td>
</tr>
<tr>
<td>Equipment: ________</td>
</tr>
<tr>
<td>Equipment Number: ________</td>
</tr>
<tr>
<td>Change Immediately? ___</td>
</tr>
</tbody>
</table>
2 Enter **inserv** in the New State: field.

3 Press **TAB** to move to the Equipment: field.

4 Enter **channel**

5 Press **TAB** to move to the Equipment Number: field.

6 Enter the number of the channel that you want to change to INSERV.

7 Press **TAB** to move to the Change Immediately? field.

8 Enter **y**

9 Press **F3** (Save).

   The system displays the following message:

   Channel xx changed to state INSERV
   Press Enter to continue.

10 Press **ENTER**.

   The system returns to the Change State of Voice Equipment Screen (Figure 68 on page 222).

11 Press **F6** (Cancel) 4 times to log out of the system.
Activating Alarm Origination

Remote Alarming allows a technician in the remote maintenance service center to receive notice that your voice system is experiencing difficulty. Alarms levels are categorized by their severity as Critical, Major and Minor. See Intuity CONVERSANT System Version 7.0 System Reference, 585-313-205, for information about remote alarming.

To activate alarm origination, do the following:

1. Log in as root.
2. Enter `cvis_menu`.
   The system displays the Voice System Administration menu (Figure 61 on page 210).
3. Select:
   - > Configuration Management
   - > Remote Alarming Administration

   The system displays the Alarm Management window (Figure 69 on page 225).
### Completing System Installation

#### Activating Alarm Origination

**Figure 69. Alarm Management Window**

<table>
<thead>
<tr>
<th>Field</th>
<th>Value</th>

</tr>
<tr>
<td>Alarm Level</td>
<td>MINOR</td>
</tr>
<tr>
<td>Alarm Suppression</td>
<td>INACTIVE</td>
</tr>
<tr>
<td>Clear Alarm Notification</td>
<td>ACTIVE</td>
</tr>
</tbody>
</table>

4. Enter the product ID number in the **Product ID:** field.

⚠ **CAUTION:**
The product ID is always a 9-digit number beginning with the number 2. Do not continue without the correct product ID number.

5. **Move to** the **Alarm Origination:** field.

6. Press **F2 (Choices).**
7 Select:

> Active

8 Verify that the entry in the Alarm Suppression: field is inactive.

If it is not, move the cursor to the Alarm Suppression: field, press F2 (Choices), and select inactive for the field.

9 Press F3 (Save).

The system displays the following message:

Alarm Form Update was successful
Press (Enter) to continue.

10 Press ENTER.

11 Continue with the next procedure, Testing Alarm Origination on page 227, if you want to test the alarm origination or if a significant amount of time has lapsed since administering the Alarm Management window.

Continue with the procedure, Baselining the Intuity CONVERSANT System on page 231, if you do not want to test the alarm origination.
Testing Alarm Origination

Use the following procedure to test remote alarm origination or if a significant amount of time has lapsed since administering the Alarm Management window.

1. Start at the Alarm Management window (Figure 69 on page 225) and press F8 (Chgkeys).

2. Press F1 (Test-alm).

   The system displays the Alarm Origination Test menu (Figure 70 on page 227).

Figure 70. Alarm Origination Test Menu

3. Select:

   > Execute Alarm Origination Test

   The system displays the Confirm window (Figure 71 on page 228).
4 Completing System Installation

Activating Alarm Origination

Figure 71. Confirm Window

Press Y.

Note: Wait approximately 1 minute for the system to process the command.

5 Select:

> Review Latest Test Results

The system displays the Alarm Origination Test Results window (Figure 72 on page 229).
 Completing System Installation

Activating Alarm Origination

Figure 72. Alarm Origination Test Results Window

Verify that no entry on the screen corresponds with the time you sent the alarm.

Note: Wait approximately 4 minutes for the test to complete.

7 Press F6 (Cancel).

The system displays the Alarm Origination Test menu (Figure 70 on page 227).
8 Select:

> Review Latest Test Results

The system displays the Alarm Origination Test Results window (Figure 73 on page 230).

**Figure 73.  Alarm Origination Test Results Window**

9 Verify that the message on the screen reads:

Day Date Time

Alarm origination test successful.
Completing System Installation

10 If the test completed successfully, press F6 (Cancel) until you reach the Voice System Administration menu (Figure 61 on page 210) and continue with the next procedure on your checklist. Press F6 (Cancel) to log out of the system.

11 If the test did not complete successfully, contact your remote maintenance service center.

Baselining the Intuity CONVERSANT System

Lucent Technologies recommends that a root or full backup be performed to baseline the system.

For the backup procedures see "Backing Up the Intuity CONVERSANT System" in Chapter 3, "Common System Procedures," in the Intuity CONVERSANT System Version 7.0 System Reference, 585-313-205.
Troubleshooting Procedures

Overview

The purpose of this chapter is to provide the on-site technician or system administrator with repair procedures for the most common system procedures.

This chapter describes some basic troubleshooting procedures for the most common system problems.

The following assumptions are made in this chapter:

- You have checked the Message Log for any relevant messages. See Chapter 4, “Alarm and Log Messages” in Intuity CONVERSANT Version 7.0 System Reference, 585-313-205.

- The resolutions in the second column of the tables are intended to provide a starting point to isolate a problem and may not be exhaustive.

- The procedures in the second column assume general editing knowledge and script familiarity, as most of the commands and procedures are performed from the command line.

- You have already performed a visual inspection of the system.
Repairing Power-Up Troubles

Power-up troubles are experienced when you are first turning the system on. Table 42 on page 233 lists the indications related to power-up troubles.

<table>
<thead>
<tr>
<th>Indication</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The system will not power up.</td>
<td>1 If your platform is a MAP/100P, verify the AC input fuse type and rating.</td>
</tr>
<tr>
<td></td>
<td>2 Verify that the power switch is in the ON position.</td>
</tr>
<tr>
<td></td>
<td>3 Verify all external system connections (power cords and monitor cables) are correct (for example, the blue cable connects to the 3270 circuit card and not to the system parallel port).</td>
</tr>
<tr>
<td></td>
<td>4 Verify all external system connections are secure.</td>
</tr>
</tbody>
</table>
## Troubleshooting Procedures

3 Check the power supply by watching for hard disk access with the disk access light.  
4 Reboot the system. See “Reboot the System,” in “Common System Procedures,” in the Intuity CONVERSANT System Reference, 585-313-205. |
Overview

This appendix provides procedures and illustrations for connections to the switch, network, or terminals to help you make the connections made at those devices.

This appendix also details external connectivity and cabling from the computer platform to switches, networks, terminals and distant modems.

Table 48 on page 260 and Table 49 on page 264 at the end of this appendix list cable ordering numbers and lengths if you need to order cables.
Slot Assignments

Circuit cards are placed in the computer in locations called *slots*. Slots are accessible from the back of the computer. *Table 44 on page 241* shows how the slots are numbered for each platform.

### Table 44. Slot Numbering

<table>
<thead>
<tr>
<th>Platform</th>
<th>ISA Numbering</th>
<th>PCI Numbering</th>
</tr>
</thead>
<tbody>
<tr>
<td>MAP/5P</td>
<td>ISA 2 through ISA 6</td>
<td>PCI 1 through PCI 3</td>
</tr>
<tr>
<td>MAP/40P</td>
<td>ISA 1 through ISA 10</td>
<td>PCI 1 through PCI 3</td>
</tr>
<tr>
<td>MAP/100P</td>
<td>ISA1 through ISA16 (slot 17 is a combination slot for the P5 200 MHz CPU circuit card)</td>
<td>PCI 1 through PCI 3 (These are backplane slots 18 through 20, respectively.)</td>
</tr>
<tr>
<td>MAP/100C</td>
<td>1 through 20 21 dedicated to CPU 22 reserved for external SCSI</td>
<td>PCI 1 through PCI 3 (These are slots 23 through 25, respectively.)</td>
</tr>
</tbody>
</table>

**Note:** A deskside MAP/100P counts from the bottom to the top while the rack-mount MAP/100P counts from left to right.
Note: The MAP/5P counts from top to bottom beginning with PCI 1 through PCI 3 and continuing with ISA 2 through ISA 6.

Fixed Slot Assignment for MAP/5P

The external SCSI connector circuit card slot assignment (PCI slot 1) is fixed in the MAP/5P.

Variable Slot Assignments for MAP/5P

The following circuit cards have variable slot assignments in the MAP/5P:

- Tip/Ring circuit cards
- Remote maintenance circuit card

Note: These assignments are limited to the number of available slots on the MAP/5P backplane. The SCSI controller circuit card must be installed in the MAP/5P as specified in Fixed Slot Assignment for MAP/5P on page 242 above.
The following rules apply to the placement of optional circuit cards in the MAP/5P:

- A maximum of four analog circuit cards is supported on the MAP/5P.
- All Tip/Ring circuit cards must be of the same type. For example, the AYC10 circuit card must not be included in systems which include an AYC30 (NGTR) Tip/Ring circuit card.
- The AYC10 (IVC6) Tip/Ring circuit cards are assigned slots sequentially, starting with slot 1.
- One remote maintenance circuit card is supported per system.

**Fixed Slot Assignments for MAP/40P**

Table 45 on page 243 identifies the slot assignments in the MAP/40P that are not variable in their arrangement.

<table>
<thead>
<tr>
<th>Slot Number</th>
<th>Circuit Card</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>PCI slot 1</td>
<td>Video Controller</td>
<td>Yes</td>
</tr>
<tr>
<td>ISA slot 10</td>
<td>P5 200-MHz CPU with on-board PCI SCSI</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Note: The external SCSI connector is required and must be installed next to PCI slot 3, I/O position 14. However, this connector does not require a connection to the backplane.

Variable Slot Assignments for MAP/40P

The following circuit cards have variable slot assignments in the MAP/40P:

- Tip/Ring circuit cards
- T1/E1 circuit cards
- PCI LAN circuit cards use PCI slots 2-3
- asynchronous SuperSerial circuit card
- SSP circuit card

Note: These assignments depend on how many cards have been installed. These rules presume that the required circuit cards are placed in the MAP/40P as specified in Fixed Slot Assignments for MAP/40P on page 243.

The following rules apply to the placement of optional cards in the MAP/40P:

- A maximum of seven Tip/Ring circuit cards is supported.
- All other circuit cards are supported as one per system.
Slot Assignments

B Cable Connectivity

- For each SSP circuit card installed, you give up capacity for one Tip/Ring circuit card.
- Tip/Ring circuit cards are assigned slots sequentially, starting with slot 1. Tip/Ring circuit cards must be placed in contiguous slots.
- Install the SSP circuit card, if provided, in the slot that is one slot higher than the highest-numbered Tip/Ring circuit card.
- If the system uses an SSP circuit card, install a TDM bus cable to connect all Tip/Ring circuit cards with the SSP circuit card. Install terminating resistors to the circuit cards on each end of the TDM bus cable. Remove the terminating resistors from all other circuit cards.

Fixed Slot Assignments for the MAP/100P

The MAP/100P is equipped with a 20-slot backplane. The slots count from bottom to the top on deskside units and from left to right on rack-mount units. Slots 1-6 are ISA slots 1-6. Slot 17 is dedicated to the CPU. Slots 18-20 are PCI slots 1-3.

Table 46 on page 246 lists the fixed slot assignments in the MAP/100P.
Cable Connectivity

Slot Assignments

Table 46. MAP/100P Fixed Slot Assignments

<table>
<thead>
<tr>
<th>Backplane Slot Number</th>

<tr>
<td>18</td>
<td>PCI slot 1</td>
<td>Video controller</td>
</tr>
<tr>
<td>19</td>
<td>PCI slot 2</td>
<td>RAID controller (if equipped)</td>
</tr>
</tbody>
</table>

Variable Slot Assignments for MAP/100P

For any variable slot assignment and circuit card slot dependencies, run the hardware resource allocator. See Appendix A, “System Configuration,” in Intuity CONVERSANT System Version 7.0 MAP/100P Maintenance, 585-313-110, for instructions.
Fixed Slot Assignments for MAP/100C

The following sections detail the fixed assignments for circuit cards installed in the MAP/100C.

Table 47 on page 247 lists slot assignments which are fixed and are not variable in their arrangement. The slot assignments apply to both required and optional circuit cards.

Table 47. MAP/100C Fixed Slot Assignments

<table>
<thead>
<tr>

<td>P5 200/CPU</td>
<td>Yes</td>
</tr>
<tr>
<td>22</td>
<td>External SCSI Connector/Terminator</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Variable Slot Assignments for MAP/100C

The following rules apply to the placement of optional boards in the MAP/100C:

- A maximum of twelve Tip/Ring circuit cards is supported.
- All other circuit cards are supported as one per system.
- Tip/Ring circuit cards are assigned slots sequentially, starting with slot 1.

Overview of Intuity CONVERSANT Serial Port Connections

Serial port connections (Figure 74 on page 249) from the system to terminals, distant modems, or other customer equipment can be made either from COM1 (Serial Port 1) or from the asynchronous SuperSerial circuit card.

If there is only one serial connection to be made, use COM1. If more than one serial connection is to be made, use the asynchronous SuperSerial circuit card first (up to eight connections) and then use COM1.

Note: COM2 is reserved for remote maintenance on systems using alarm origination.

**Glossary**

**Numerics**

23B+D
23 bearer (communication) and 1 data (signaling) channel on a T1 PRI circuit card.

30B+D
30 bearer (communication) and 1 data (signaling) channel (plus framing channel 0) on an E1 PRI circuit card.

3270 interface
A link between one or more Intuity CONVERSANT machines and a host mainframe. In INTUITY CONVERSANT system documentation, the 3270 interface specifically means the link between one or more system machines and an IBM host mainframe.

47B+D
47 bearer (communication) and 1 data (signaling) channel on two T1 PRI circuit cards.
4ESS®
A large Lucent central office switch used to route calls through the telephone network.

A
AC
alternating current

ACD
automatic call distributor

AD
application dispatch

AD-API
application dispatch application programming interface
Glossary

**adaptive differential pulse code modulation**
A means of encoding analog voice signals into digital signals by adaptively predicting future encoded voice signals. This adaptive modulation method reduces the number of bits required to encode voice. See also “pulse code modulation.”

**adjunct products**
Products (for example, the Adjunct/Switch Application Interface) that the Intuity system administers via cut-through access to the inherent management capabilities of the product itself; this is in opposition to the ability of the Intuity CONVERSANT system to administer the switch directly.

**Adjunct/Switch Application Interface**
An optional feature package that provides an Integrated Services Digital Network-based interface between Lucent Technologies PBXs and adjunct processors.

**ADPCM**
adaptive differential pulse code modulation

**ADU**
asynchronous data unit
advanced speech recognition
A speech recognition ability that allows the system to understand WholeWord and FlexWord™ inputs from callers.

affiliate
A business organization that Lucent controls or with which Lucent is in partnership.

AGL
application generation language

alarm relay unit
A unit used in central office telecommunication arrangements that transmits warning indicators from telephone communications equipment (such as an Intuity CONVERSANT system) to audio.

ALERT
System alerter process

alerter
A system process that responds to patterns of events logged by the “logdaemon” process.
American Standard Code for Information Interchange

A standard code for data representation that represents alphanumeric characters as binary numbers. The code includes 128 upper- and lowercase letters, numerals, and special characters. Each alphanumeric and special character has an ASCII code (binary) equivalent that is 1 byte long.

analog

An analog signal, such as voice or music, that varies in a continuous manner. An analog signal may be contrasted with a digital signal, which represents only discrete states.

ANI

Automatic number identification

announcement

A message the system plays to the caller to provide information. The caller is not asked to give a response. Compare to “prompt.”

API

Application programming interface
**application**

The automated transaction (interactions) among the caller, the voice response system, and any databases or host computers required for your business. See also “application script.”

**application administration**

The component of the Intuity CONVERSANT system that provides access to the applications currently available on your system and helps you to manage and administer them.

**application installation**

A two-step process in which the Intuity CONVERSANT system invokes the TSM script assembler for the specific application name and moves files to the appropriate directories.

**application script**

The computer program that controls the application (the transaction between the caller and the system). The Intuity CONVERSANT system provides several methods for creating application scripts, including Voice@Work, Script Builder, Transaction Assembler Script (TAS) language, and the Intuity Response Application Programming Interface (IRAPI).
application verification

A process in which the Intuity CONVERSANT system verifies that all the components needed by an application are complete.

ASCII

American Standard Code for Information Interchange

ASI

analog switch integration

ASR

advanced speech recognition

asynchronous communication

A method of data transmission in which bits or characters are sent at irregular intervals and spaced by start and stop bits rather than by time. Compare to “synchronous communication.”

asynchronous data unit

An electronic communications device that allows computer systems to communicate over asynchronous lines more than 50 feet (15 m) in length.
Automatic Call Distributor

That part of a telephone system that recognizes and answers incoming calls and completes these calls based on a set of instructions contained in a database. The ACD can send the call to an operator or group of operators as soon as the operator has completed a previous call or after the system has played a message to the caller.

Automatic Number Identification

A method of identifying the calling party by automatically receiving a string of digits that identifies the calling station of a particular customer.

AYC5B

The IVP6 Tip/Ring (analog) circuit card.

AYC10

The IVC6 Tip/Ring (analog) circuit card.

AYC21

The E1/T1 (digital) circuit card.

AYC30

The NGTR (analog) circuit card.
AYC43

The speech and signal processor (SSP) circuit card.

B

back up

The preservation of the information in a file in a different location, so that the data is not lost in the event of hardware or system failure.

backing up an application

Using a utility that makes an archive copy of a completed application or an interim copy of an application in progress. The back-up copy can be restored to the system if the on-line version is damaged, or if you make revisions and want to go back to the previous version.

barge-in

A capability provided by WholeWord speech recognition and Dial Pulse Recognition (DPR) that allows callers to speak or enter their responses during the prompt and have those responses recognized (similar to the Speak with Interrupt capability). See also “echo cancellation.”
batch file
A file containing one or more lines, each of which is a command executable by the UNIX shell.

BB
bulletin board

binary synchronous communications
A character-oriented synchronous link protocol.

blind transfer protocol
A protocol in which a call is completed as soon as the extension is dialed, without having to wait to see if the telephone is busy or if the caller answered.

bps
bits per second

BRDG
call bridging process
bridging
The process of connecting one telephone network connection to another over the Intuity CONVERSANT system TDM bus. Bridging decreases the processing load on the system since an active bridge does not require speech processing, database access, host activity, etc., for the transaction.

BSC
binary synchronous communications

bundle
In the context of the Enhanced File Transfer package, this term is used to denote a single file, a group of files (package), or a combination of both.

byte
A unit of storage in the computer. On many systems, a byte is 8 bits (binary digits), which is the equivalent of one character of text.
call classification analysis
A process that enables application designers to use information available within the system to classify the disposition of originated and transferred calls. Intelligent CCA is provided with the system. Full CCA is an optional feature package.

call data event
A parameter that specifies a list of variables that are appended to a call data record at the end of each call.

call data handler process
A software process that accumulates generic call statistics and application events.

called party number
The number dialed by the person making a telephone call. Telephone switching equipment can use this number to selectively route an incoming call to a particular department or agent.

caller
The party who calls for a service, gets connected to the Intuity CONVERSANT system, and interacts with it. As the Intuity CONVERSANT system can also make outbound calls for service, the caller can also be the person who responds to those outbound calls.
call flow
See "transaction."

call progress tones
Standard telephony sounds that indicate the status of the call. These sounds include busy, fast busy, ringback, reorder, etc.

card cage
An area within an Intuity CONVERSANT system platform that contains and secures all of the standard and optional circuit cards used in the system.

cartridge tape drive
A high-capacity data storage/retrieval device that can be used to transfer large amounts of information onto high-density magnetic cartridge tape based on a predetermined format. This tape can be removed from the system and stored as a backup, or used on another system.

CAS
channel associated signalling
caution
An admonishment or advisory statement used in Intuity CONVERSANT system documentation to alert the user to the possibility of a service interruption or a loss of data.

CCA
call classification analysis

CDH
call data handler process

CELP
code excited linear prediction

central office
An office or location in which large telecommunication devices such as telephone switches and network access facilities are maintained. These locations follow strict installation and operation requirements.

central processing unit
See “processor.”
CGEN
Voice system general message class

channel
See “port.”

channel associated signaling
A type of signaling that can be used on E1 circuit cards. It occurs on channel 16.

CICS
Customer Information Control System

circuit card upgrade
A new circuit card that replaces an existing card in the platform. Usually the replacement is an updated version of the original circuit card to replace technology made obsolete by industry trends or a new system release.

cluster controller
A bisynchronous interface that provides a means of handling remote communication processing.
Glossary

CMS
Call Management System

CO
central office

code excited linear prediction
A means of encoding analog voice signals into digital signals that provides excellent quality with use of minimum disk space.

command
An instruction or request the user issues to the system software to make the system perform a particular function. An entire command consists of the command name and options.

configuration
The arrangement of the software and hardware of a computer system or network. The Intuity CONVERSANT system configuration includes either a standard or custom processor, peripheral equipment (for example, printers and modems), and software applications. Configuration also refers to the way the switch network is set up; that is, the types of products that are in the network and how those products communicate.
configuration management
The component of the system that allows you to manage the current configuration of voice channels, host sessions, and database connections, assign scripts to run on specific voice channels or host sessions, assign functionality to SSP and E1/T1 circuit cards, and perform various maintenance functions.

connect and disconnect (C and D) tones
DTMF tones that inform the system when the attendant has been connected (C) and when the caller has been disconnected (D).

connected digits
A sequence of digits that the system can process as a group, rather than requiring the caller to enter the digits one at a time.

Converse Data Return (conv_data)
A Script Builder action that supports the DEFINITY® call vectoring (routing) feature by enabling the switch to retain control of vector processing in the system environment. It supports the DEFINITY “converse” vector command to establish a two-way routing mechanism between the switch and the system to facilitate data passing and return.

Glossary

CPU

central processing unit

crash

An interactive utility for examining the operating system core and for determining if system parameters are being exceeded.

CSU

channel service unit

custom speech

Unique words or phrases to be used in Intuity CONVERSANT system voice prompts that Lucent Technologies custom records on a per-customer basis.

custom vocabulary

A specialized package of unique words or phrases created on a per-customer basis and used by WholeWord or FlexWord speech recognition.

Customer Information Control System

Part of the operating system that manages resources for running applications (for example, IND$FILE). Note that TSO and CMS provide analogous functionality in other host environments.
Glossary

CVS

converse vector step

danger
An admonishment or advisory statement used in Intuity CONVERSANT system documentation to alert the user to the possibility of personal injury or death.

data interface process
A software process that communicates with Script Builder applications.

database
A structured set of files, records, or tables.

database field
A field used to extract values from a local database and form the structure upon which a database is built.

database record
The information in a database for a person, product, event, etc. The database record is made up of individual fields for each information item.

**database table**
A structure, made up of columns and rows, that holds information in a database. Database tables provide a means of storing information that changes too often to “hard-code,” or store permanently, in the transaction outline.

dB
decibel

**DB**
database

**DBC**
database checking process

**DBMS**
database management system

**DC**
direct current

**DCE**
data communications equipment
**DCP**

digital communications protocol

**debug**

The process of locating and correcting errors in computer programs; also referred to as “troubleshooting.”

**default**

The way a computer performs a task in the absence of other instructions.

**default owner**

The owner of a channel when no process takes ownership of that channel. The default owner holds all idle, in-service channels. In terms of the IRAPI, this is typically the Application Dispatch process.

**diagnose**

The process of performing diagnostics on a bus or on Tip/Ring, E1/T1, or SSP circuit cards.

**dial ahead**

The ability to collect and process touch-tone inputs in sequence, even when they are received before the prompts.
**Glossary**

**dial pulse recognition**
A method of recognizing caller pulse inputs from a rotary telephone.

**dialed number identification service**
A service that allows incoming calls to contain information about the telephone number for which it is destined.

**dial through**
A capability provided by touch-tone and dial pulse recognition that allows callers to enter their responses during the prompt and have those responses recognized (similar to the Speak with Interrupt capability). See also “**barge-in**” and “**echo cancellation**”.

**dictionary**
A reference book containing an alphabetical list of words, with information given for each word including meaning, pronunciation, and etymology.

**DIIMM**
**dual in-line memory module**

**DIO**
**disk input and output process**
DIP

**data interface process**

directory

A type of file used to group and organize other files or directories.

display errdata

A command that displays system errors sent to the logger.

DMA

direct memory address

DNIS

dialed number identification service

DPR

dial pulse recognition

DSP

digital signal processor
DTE

data terminal equipment

DTMF
dual tone multi-frequency

DTR
data terminal ready

dual 3270 links
A feature that provides an additional physical unit (PU) for a cost-effective means of connecting to two host computers. The customer can connect a system to two separate FEPs or to a single FEP shared by one or more host computers. Each link supports a maximum of 32 LUs.

dual tone multi-frequency
A touch-tone sound that is an audio signal including two different frequencies. DTMF feedback is the process of the “switch” providing this information to the system. DTMF muting is the process of ignoring these tones (which might be simulated by human speech) when they are not needed for the application.
dump space

An area of the disk that is fixed in size and should equal the amount of RAM on the system. The operating system "dumps" an image of core memory when the system crashes. The dump can be fetched after rebooting to help in analyzing the cause of the crash.

E&M

Ear and Mouth

E1 / T1

Digital telephony interfaces, commonly called trunks. E1 is an international standard at 2.048 Mbps. T1 is a North American standard at 1.544 Mbps.

Ear and Mouth

A common T1 trunking protocol for connection between two “switches.”

EBCDIC

Extended Binary Coded Decimal Interexchange Code
**echo cancellation**

The process of making the channel quiet enough so that the system can hear and recognize WholeWord and dial pulse inputs during the prompt. See also “**barge-in**.”

**ECS**

*Enterprise Communications Server*

**editor system**

A system that allows speech phrases to be displayed and edited by a user. See “**Graphical Speech Editor**.”

**EFT**

*Enhanced File Transfer*

**EIA**

Electronic Industries Association

**EISA**

Extended Industry Standard Architecture

**EMI**

electromagnetic interference

---

*Intuity™ CONVERSANT® System Version 7.0 New System Installation 585-313-106*  
*Issue 3 January 2000  293*
enhanced basic speech
Pre-recorded speech available from Lucent Technologies in several languages. Sometimes called "standard speech."

Enhanced File Transfer
A feature that allows the transferring of files automatically between the Intuity CONVERSANT system and a synchronous host processor on a designated logical unit.

Enhanced Serial Data Interface
A software- and hardware-controlled method used to store data on magnetic peripherals.

Enterprise Communications Server
The telephony equipment that connects your business to the telephone network. Sometimes called a "switch."

error message
A message on the screen indicating that something is wrong with a possible suggestion of how to correct it.

external alarms feature message class

external actions
Specific predefined system tasks that Script Builder can call or *invoke* to interact with other products or services. When an external action is invoked, the system displays a form that provides choices in each field for the application developer to select. Examples are Call_Bridge, Make_Call, SP_Allocate, SR_Prompt, etc. In Voice@Work, external actions are treated as "external functions."

external functions
Specific predefined (or customer-created) system tasks that Voice@Work or Script Builder can call or *invoke* to interact with other products or services. The function allows the application developer to enter the argument(s) for the function to act on. Examples are concat, getarg, length, substring, etc. See also "external actions."

F

FAX Actions
An optional feature package that allows the system to send fax messages.
Glossary

FCC
Federal Communications Commission

FDD
floppy disk drive

feature
A function or capability of a product or an application within the Intuity CONVERSANT system.

feature package
An optional package that may contain both hardware and software resources to provide additional functionality to a standard system.

feature_tst script package
A standard Intuity CONVERSANT system software program that allows a user to perform self-tests of critical hardware and software functionality.

FEP
front end processor
### Glossary

**FFE**
- **Form Filler Plus feature message class**

**field**
- See “database field.”

**FIFO**
- **first-in-first-out processing order**

**file**
- A collection of data treated as a basic unit of storage.

**file transfer**
- An option that allows you to transfer files interactively or directly to and from UNIX using the file transfer system (FTS).

**filename**
- Alphabetic characters used to identify a particular file.

**FlexWord™ speech recognition**
- A type of speech recognition based on subword technology that recognizes phonemes or parts of words in a specific language. See also “subword technology.”
**Glossary**

**foos**
- facility out-of-service state

**Form Filler Plus**
- An optional feature package that provides the capability for application scripts to record a caller’s responses to prompts for later transcription and review.

**FTS**
- file transfer process message class

**Full CCA**
- A feature package that augments the types of call dispositions that Intelligent CCA can provide.

**function key**
- A key, labeled F1 through F8, on your keyboard to which the Intuity CONVERSANT system software gives special properties for manipulating the user interface.

**GEN**
- PRISM logger and alerter general message class
Grammar

The inputs that a recognizer can match (identify) from a caller.

Graphical Speech Editor

A window-driven, X Windows/Motif based, graphical user interface (GUI) that can be accessed to perform different functions associated with the creation and editing of speech files for applications. The editing is done on the Intuity CONVERSANT system.

GSE

Graphical Speech Editor

GUI

g graphical user interface

Hard disk drive

A high-capacity data storage/retrieval device that is located inside a computer platform. A hard disk drive stores data on nonremovable high-density magnetic media based on a predetermined format for retrieval by the system at a later date.
Hardware

The physical components of a computer system. The central processing unit, disks, tape, and floppy drives, etc., are all hardware.

Hardware Resource Allocator

A software program that resolves or blocks the allocation of CPU and memory resources for controlling and optional circuit cards.

Hardware Upgrade

Replacement of one or more fundamental platform hardware components (for example, the CPU or hard disk drive), while the existing platform and other existing optional circuit cards remain.

HDD

Hard Disk Drive

High Level Language Applications Programming Interface

An application programming interface that allows a user to write custom applications that can communicate with a host computer via an API.

HLLAPI

High Level Language Applications Programming Interface
Glossary

HOST

host interface process message class

host computer
A computer linked to a network to provide a range of services, such as database access and computation. The host computer operates in a time-sharing manner with other computers linked to it via the network.

hwoos
hardware out-of-service state

Hz
Hertz

IBM
International Business Machines

iCk or ICK
The system integrity checking process.
ID
identification

IDE
integrated disk electronics

idle channel
A channel that either has no owner or is owned by its default owner and is onhook.

IE
information element

IND$FILE
The standard SNA file transfer utility that runs as an application under CICS, TSO, and CMS. IND$FILE is independent of link-level protocols such as BISYNC and SDLC.

independent software vendor
A company that has an agreement with Lucent Technologies to develop software to work with the Intuity CONVERSANT system to provide additional features required by customers.
**indexed table**
A table that, unlike a nonindexed table, can be searched via a field name that has been indexed.

**industry standard architecture**
A PC bus standard that allows processors and other circuit cards to communicate with each other.

**INIT**
voice system initialization message class

**initialize**
To start up the system for the first time.

**inserv**
in-service state

**Integrated Services Digital Network**
A network that provides end-to-end digital connectivity to support a wide range of voice and data services.
Integrated Voice Processing (IVP) circuit card

The IVP6 circuit card that provides Tip/Ring connections. The NGTR (AYC30) card also provides the same functions.

intelligent CCA

Monitoring the line after dialing is complete to determine whether a busy, reorder (fast busy), or other failure has been encountered. It also recognizes when the extension is answered or if the extension is not answered after a specified number of rings. The monitoring capabilities are dependent on the network interface circuit card and protocol used.

interface

The access point of a system. With respect to the Intuity CONVERSANT system, the interface is designed to provide you with easy access to the software capabilities.

interrupt

The termination of voice and/or telephony functions when some condition occurs.

Intuity Response Application Programming Interface

A library of commands that provide a standard development interface for voice-telephony applications.

ISV
  independent software vendor

ITAC
  International Technical Assistance Center

IVC6 circuit card (AYC10)
  A Tip/Ring (analog) circuit card with six channels.

IVP6 circuit card (AYC5B)
  A Tip/Ring (analog) card with six channels.

K

Kbps
  kilobytes per second

Kbyte
  kilobyte
keyboard mapping
In emulation mode, this feature enables the keyboard to send 3270 keyboard codes to the host according to a configuration table set up during installation.

keyword spotting
A capability provided by WholeWord speech recognition that allows the system to recognize a single word in the middle of an entire phrase spoken by a caller in response to a prompt.

LAN
local area network

LDB
local database

LED
light-emitting diode

library states
The state information about channel activities maintained by the IRAPI.
LIFO
last-in-first-out processing order

line side E1
A digital method of interfacing an Intuity CONVERSANT system to a PBX or “switch” using E1-related hardware and software.

line side T1
A digital method of interfacing an Intuity CONVERSANT system to a PBX or “switch” using T1-related hardware and software.

listfile
An ASCII catalog that lists the contents of one or more talkfiles. Each application script is typically associated with a separate listfile. The listfile maps speech phrase strings used by application scripts into speech phrase numbers.

local area network
A data communications network in a limited geographical area. The LAN provides communications between computers and peripherals.

local database
A database residing on the Intuity CONVERSANT system.
**LOG**

Intuity CONVERSANT system logger process message class

**logical unit**

A type of SNA Network Addressable Unit.

**logdaemon**

A UNIX system information and error logging process.

**logger**

See “logdaemon.”

**logging on/off**

Entering or exiting the Intuity CONVERSANT system software.

**LSE1**

line side E1

**LST1**

line side T1
LU

**logical unit**

**magnetic peripherals**
Data storage devices that use magnetic media to store information. Such devices include hard disk drives, floppy disk drives, and cartridge tape drives.

**main screen**
The Intuity CONVERSANT system screen from which you are able to enter either the System Administration or Voice System Administration menu.

**maintenance process**
A software process that runs temporary diagnostics and maintains the state of circuit cards and channels.

**manoos**
manually out-of-service state

**MAP/100P**
multi application platform 100P
MAP/100C
multi application platform 100C

MAP/40P
multi application platform 40P

MAP/5P
multi application platform 5P

masked event
An event that an application can ignore (that is, the application can request not to be informed of the event).

master
A circuit card that provides clock information to the TDM bus.

Mbps
megabits per second

MByte
megabyte
megabyte
A unit of memory equal to 1,048,576 bytes (1024 x 1024). It is often rounded to one million.

menu
Options presented to a user on a computer screen or with voice prompts.

MF
multifrequency

MHz
megahertz

Microsoft
A manufacturer of software products, primarily for IBM-compatible computers.

mirroring
A method of data backup that allows all of the data transactions to the primary hard disk drive to be copied and maintained on a second identical drive in near real time. If the primary disk drive crashes or becomes disabled, all of the data stored on it (up to 1.2 billion bytes of information) is accessible on the second mirrored disk drive.
ms
millisecond

msec
millisecond

MS-DOS
A personal computer disk operating system developed by the Microsoft Corporation.

MTC
maintenance process

multifrequency
Dual tone digit signalling (similar to DTMF), used for trunk addressing between network switches or by network operators.

multithreaded application
A single process/application that controls several channels. Each thread of the application is managed explicitly. Typically this means state information for each thread is maintained and the state of the application on each channel is tracked.
NCP
Network Control Program

NEBS
Network Equipment Building Standards

NEMA
National Electrical Manufacturers Association

netoos
network out-of-service state

NetView
An optional feature package that transmits high-priority (major or critical) messages to the host as operator-generated alerts (OGAs) over the 3270 host link. The NetView Alarm feature package does not require a dedicated LU.

next generation Tip/Ring (AYC30) circuit card
An analog circuit card with six channels.
**NFAS**
non-facility associated signalling

**NFS**
network file sharing

**NGTR**
next generation Tip/Ring (AYC30) circuit card

**NM-API**
Network Management - Application Programming Interface

**NMVT**
network management vector transport

**nonex**
nonexistent state

**nonindexed table**
A table that can be searched only in a sequential manner and not via a field name.
Glossary

**nonmasked event**
An event that must be sent to the application. Generally, an event is nonmaskable if the application would likely encounter state transition errors by trying to it.

**NRZ**
on return to zero

**NRZI**
on return to zero inverted

**null value**
An entry containing no value. A field containing a null value is normally displayed as blank and is different from a field containing a value of zero.

**obsolete hardware**
Hardware that is no longer supported on the Intuity CONVERSANT system.

**OEM**
original equipment manufacturer
OGA

**operator-generated alert**

on-line help

Messages or information that appear on the user's screen when a “function key” (F1 through F8) is pressed.

**operator-generated alert**

A system-monitoring message that is transmitted from the Intuity CONVERSANT system or other computer system to an IBM host computer and is classified as critical or major.

**option**

An argument used in a command line to modify program output by modifying the execution of a command. When you do not specify any options, the command executes according to its default options.

**ORACLE**

A company that produces relational database management software. It is also used as a generic term that identifies a database residing on a local or remote system that is created and maintained using an ORACLE RDBMS product.
P

P&C
Prompt and Collect Script Builder action step

PBX
private branch exchange

PC
personal computer

PCB
printed circuit board

PCI
peripheral component interconnect

PCM
pulse code modulation

PEC
price element code
peripheral (device)

Equipment such as printers or terminals that is in addition to the basic processor.

peripheral component interconnect

A newer, higher speed PC bus that is gradually displacing ISA for many components.

permanent process

A process that starts and initializes itself before it is needed by a caller.

phoneme

A single basic sound of a particular spoken language. For example, the English language contains 40 phonemes that represent all basic sounds used with the language. The English word “one” can be represented with three phonemes, “w” - “uh” - “n.” Phonemes vary between languages because of guttural and nasal inflections and syllable constructs.

phrase filtering (screening)

The rejection of unrecognized speech. The WholeWord and FlexWord speech recognition packages can be programmed to reprompt the caller if the Intuity CONVERSANT system does not recognize a spoken response.
phrase tag
A string of up to 50 characters that identifies the contents of a speech phrase used by an application script.

platform migration
See “platform upgrade.”

platform upgrade
The process of replacing the existing platform with a new platform.

pluggable
A term usually used with speech technologies, in particular standard speech, to indicate that a basic algorithmic technique has been implemented to accept one or more sets of parameters that tailors the algorithm to perform in one or more languages.

poll
A message sent from a central controller to an individual station on a multipoint network inviting that station to send if it has any traffic.
polling
A network arrangement whereby a central computer asks each remote location whether it wants to send information. This arrangement enables each user or remote data terminal to transmit and receive information on shared facilities.

port
A connection or link between two devices that allows information to travel to a desired location. See “telephone network connection.”

PRI
Primary Rate Interface

Primary Rate Interface
An ISDN term for connections over E1 or T1 facilities that are usually treated as trunks.

private branch exchange
A private switching system, either manual or automatic, usually serving an organization, such as a business or government agency, and usually located on the customer’s premises.
**Glossary**

**Processor**
In Intuity CONVERSANT system documentation, the computer on which UnixWare and Intuity CONVERSANT system software runs. In general, the part of the computer system that processes the data. Also known as the “central processing unit.”

**Prompt**
A message played to a caller that gives the caller a choice of selections in a menu and asks for a response. Compare to “announcement.”

**Prompt and Collect (P and C)**
A message played to a caller that gives the caller a choice of selections in a menu and asks for a response. The responses is collected and the script progresses based on the caller’s response.

**Pseudo Driver**
A driver that does not control any hardware.

**PS&BM**
Power supply and battery module
Glossary

**PSTN**
public switch telephone network

**pulse code modulation**
A digital modulation method of encoding voice signals into digital signals. See also “adaptive differential pulse code modulation.”

**RAID**
redundant array of independent disks

**RAID array**
An assembly of disk drives configured to provide some level of RAID functionality.

**RAM**
random access memory

**RDMBS**
ORACLE relational database management system
**RECOG**

speech recognition feature message class

**recognition type**

The type of input the recognizer can understand. Available types include touch-tone, dial pulse, and Advanced Speech Recognition (ASR), which includes WholeWord and FlexWord speech recognition.

**recognizer**

The part of the system that compares caller input to a grammar in order to correctly match (identify) the caller input.

**record**

See “database record.”

**recovery**

The process of using copies of the Intuity CONVERSANT system software to reconstruct files that have been lost or damaged. See also “restore.”

**remote database**

Information stored on a system other than the Intuity CONVERSANT system that can be accessed by the Intuity CONVERSANT system.
remote maintenance circuit card
An Intuity CONVERSANT system circuit card, available with a built-in modem, that allows remote personnel (for example, field support) to access all Intuity CONVERSANT system machines. This card is standard equipment on all new MAP/100, MAP/40, and MAP/5P purchases.

REN
ringer equivalence number

reports administration
The component of Intuity CONVERSANT system that provides access to system reports, including call classification, call data detail, call data summary, message log, and traffic reports.

restore
The process of recovering lost or damaged files by retrieving them from available back-up tapes or from another disk device. See also “recovery.”

restore application
A utility that replaces a damaged application or restores an older version of an application.
**reuse**

The concept of using a component from a source system in a target system after a software upgrade or platform migration.

**RFS**

remote file sharing

**RM**

resource manager

**RMB**

remote maintenance circuit card

**rollback**

To cancel changes to a database since the point at which changes were last committed.

**rollback segment**

A portion of the database that records actions that should be undone under certain circumstances. Rollback segments are used to provide transaction rollback, read consistency, and recovery.
Glossary

**RTS**
request to send

**SBC**
sub-band coding

**screen pop**
A method of delivering a screen of information to a telephone operator at the same time a telephone call is delivered. This is accomplished by a complex chain of tasks that include identifying the calling party number, using that information to access a local or remote ORACLE database, and pulling a “form” full of information from the database using an ORACLE database utility package.

**script**
The set of instructions for the Intuity CONVERSANT system to follow during a transaction.
Script Builder

An optional software package that provides a menu-oriented interface designed to assist in the development of custom voice response applications on the Intuity CONVERSANT system (see also "Voice@Work").

SCSI

small computer system interface

SDLC

synchronous data link control

SDN

software defined network

shared database table

A database table that is used in more than one application.

shared speech

Speech that is a part of more than one application.
**shared speech pools**
A parameter that allows the user of a voice application to share speech components with other applications.

**SID**
station identification

**signal processor circuit card (AYC2, AYC2B, AYC2C, or AYC9d)**
A speech processing circuit card that is an older, lower-capacity version of the speech and signal processor (SSP) circuit card (AYC43).

**SIMMs**
single inline memory modules

**single inline memory modules**
A method of containing random access memory (RAM) chips on narrow circuit card strips that attach directly to sockets on the CPU circuit card. Multiple SIMMs are sometimes installed on a single CPU circuit card.

**single-threaded application**
An application that runs on a single voice channel.
slave
A circuit card that depends on the TDM bus for clock information.

SLIP
serial line interface protocol

small computer system interface
A disk drive control technology in which a single SCSI adapter circuit card plugged into a PC slot is capable of controlling as many as seven different hard disks, optical disks, tape drives, etc.

SNA
systems network architecture

SNMP
simple network management protocol

software
The set or sets of programs that instruct the computer hardware to perform a task or series of tasks — for example, UnixWare software and the Intuity CONVERSANT system software.
software upgrade

The installation of a new version of software in which the existing platform and circuit cards are retained.

source system

The system from which you are upgrading (that is, your system as it exists before you upgrade).

speech and signal processor circuit card (AYC43)

The high-performance signal processing circuit card introduced in V6.0 capable of simultaneous support for various speech technologies.

speech energy

The amount of energy in an audio signal. Literally translated, it is the output level of the sound in every phonetic utterance.

speech envelope

The linear representation of voltage on a line. It reflects the sound wave amplitude at different intervals of time. This envelope can be plotted on a graph to represent the oscillation of an audio signal between the positive and negative extremes.
speech file

A file containing an encoded speech phrase.

speech filesystem

A collection of several talkfiles. The filesystem is organized into 16-Kbyte blocks for efficient management and retrieval of talkfiles.

speech modeling

The process of creating WholeWord speech recognition algorithms by collecting thousands of different speech samples of a single word and comparing them all to obtain a statistical average of the word. This average is then used by a WholeWord speech recognition program to recognize a single spoken word.

speech space

An area that contains all digitized speech used for playback in the applications loaded on the system.

speech phrase

A continuous speech segment encoded into a digital string.

speech recognition

The ability of the system to understand input from callers.
SPIP
signal processor interface process

SPPLIB
speech processing library

SQL
structured query language

SR
speech recognition

SSP
speech and signal processor circuit card (AYC43)

standard speech
The speech package available in several languages containing simple words and phrases produced by Lucent Technologies for use with the Intuity CONVERSANT system. This package includes digits, numbers, days of the week, and months, each spoken with initial, medial, and falling inflection. The speech is in digitized files stored on the hard disk to be used in voice prompts and messages to the caller. This feature is also called enhanced basic speech.
standard vocabulary

A standard package of simple word speech models provided by Lucent Technologies and used for WholeWord speech recognition. These phrases include the digits “zero” through “nine,” “yes,” “no,” and “oh,” or the equivalent words in a specific local language.

string

A contiguous sequence of characters treated as a unit. Strings are normally bounded by white spaces, tabs, or a character designated as a separator. A string value is a specified group of characters symbolized by a variable.

structured query language

A standard data programming language used with data storage and data query applications.

subword technology

A method of speech recognition used in FlexWord recognition that recognizes phonemes or parts of words. Compare to “WholeWord speech recognition.”

switch

A software and hardware device that controls and directs voice and data traffic. A customer-based switch is known as a “private branch exchange.”
switch hook
The device at the top of most telephones that is depressed when the handset is resting in the cradle (in other words, is on hook). The device is raised when the handset is picked up (in other words, when the telephone is off hook).

switch hook flash
A signaling technique in which the signal is originated by momentarily depressing the “switch hook.”

switch interface administration
The component of the Intuity CONVERSANT system that enables you to define the interaction between the Intuity CONVERSANT system and switches by allowing you to establish and modify switch interface parameters and protocol options for both analog and digital interfaces.

switch network
Two or more interconnected telephone switching systems.

synchronous communication
A method of data transmission in which bits or characters are sent at regular time intervals, rather than being spaced by start and stop bits. Compare to “asynchronous communication.”
SYS

UNIX system calls message class

sysgen

system generation

System 75

An advanced digital switch supporting up to 800 lines that provides voice and data communications for its users.

System 85

An advanced digital switch supporting up to 3000 lines that provides voice and data communications for its users.

system administrator

The person assigned the responsibility of monitoring all Intuity CONVERSANT system software processing, performing daily system operations and preventive maintenance, and troubleshooting errors as required.

system architecture

The manner in which the Intuity CONVERSANT system software is structured.
**system message**

An event or alarm generated by either the Intuity CONVERSANT system or end-user process.

**system monitor**

A component of the Intuity CONVERSANT system that tests to verify that each incoming telephone line and its associated Tip/Ring or T1 circuit card is functional. Through the “System Monitor” component, you are able to see displays of the Voice Channel and Host Session Monitors.

**T1**

A digital transmission link with a capacity of 1.544 Mbps.

**table**

See “database table.”

**tag image file format**

A format for storing and exchanging digital image data associated with fax modem data transfers and other applications.
talkfile
An ASCII file that contains the speech phrase tags and phrase tag numbers for all the phrases of a specific application. The speech phrases are organized and stored in groups. Each talkfile can contain up to 65,535 phrases, and the speech filesystem can contain multiple talkfiles.

talkoff
The process of a caller interrupting a prompt, so the prompt message stops playing.

target system
The system to which you are upgrading (that is, your system as you expect it to exist after you upgrade).

TAS
transaction assembler script

TCC
Technology Control Center

TCP/IP
transmission control protocol/internet protocol
### Glossary

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td><strong>TDM</strong></td>
<td>time division multiplexing</td>
</tr>
<tr>
<td><strong>TE</strong></td>
<td>terminal emulator</td>
</tr>
<tr>
<td><strong>telephone network connection</strong></td>
<td>The point at which a telephone network connection terminates on an Intuity CONVERSANT system. Supported telephone connections are Tip/Ring, T1, and E1.</td>
</tr>
<tr>
<td><strong>terminal emulator</strong></td>
<td>Software that allows a PC or UNIX process to look like a specific type of terminal. In particular, it allows the Intuity CONVERSANT system to temporarily transform itself into a &quot;look alike&quot; of an IBM 3270 terminal. In addition to providing full 3270 functionality, the terminal emulator enables you to transfer files to and from UNIX.</td>
</tr>
<tr>
<td><strong>text-to-speech</strong></td>
<td>An optional feature that allows an application to play US English speech directly from ASCII text by converting that text to synthesized speech. The text can be used for prompts or for text retrieved from a database or host, and can be spoken in an application with prerecorded speech. text-to-speech application development is supported through Voice@Work and Script Builder.</td>
</tr>
</tbody>
</table>
ThickNet
A 10-mm (10BASE5) coaxial cable used to provide interLAN communications.

ThinNet
A 5-mm (10BASE2) coaxial cable used to provide interLAN communications.

TIFF
tag image file format

time-division multiplex
A method of serving a number of simultaneous channels over a common transmission path by assigning the transmission path sequentially to the channels, with each assignment being for a discrete time interval.

Tip/Ring
Analog telecommunications using four-wire media.

token ring
A ring type of local area network that allows any station in the network to communicate with any other station.
trace
A command that can be used to monitor the execution of a script.

traffic
The flow of information or messages through a communications network for voice, data, or audio services.

transaction
The interactions (exchanges) between the caller and the voice response system. A transaction can involve one or more telephone network connections and voice responses from the Intuity CONVERSANT system. It can also involve one or more of the system optional features, such as speech recognition, 3270 host interface, FAX Actions, etc.

transaction assembler script
The computer program code that controls the application operating on the voice response system. The code can be produced from Voice@Work, Script Builder, or by writing directly in TAS code.

transaction state machine process
A multi-channel IRI API application that runs applications controlled by TAS script code.

</table>
TWIP
T1 interface process

UK
United Kingdom

US
United States of America

UNIX Operating System
A multiuser, multitasking computer operating system originally developed by Lucent Technologies.

UNIX shell
The command language that provides a user interface to the UNIX operating system.

upgrade scenario
The particular combination of current hardware, software, application and target hardware, software, applications, etc.
usability

A measurement of how easy an application is for callers to use. The measurement is made by making observations and by asking questions. An application should have high usability to be successful.

USOC

universal service ordering code

UVL

unified voice library

V

VDC

video display controller

vi editor

A screen editor used to create and change electronic files.

virtual channel

A channel that is not associated with an interface to the telephone network (Tip/Ring, T1, LSE1/LST1, or PRI). Virtual channels are intended to run "data-only"
applications which do not interact with callers but may interact with DIPs. Voice or network functions (for example, coding or playing speech, call answer, origination, or transfer) will not work on a virtual channel. Virtual channel applications can be initiated only by a “virtual seizure” request to TSM from a DIP.

**vocabulary**

A collection of words that the Intuity CONVERSANT system is able to recognize using either WholeWord or FlexWord speech recognition.

**vocabulary activation**

The set of active vocabularies that define the words and wordlists known to the FlexWord recognizer.

**vocabulary loading**

The process of copying the vocabulary from the system where it was developed and adding it to the target system.

**Voice@Work**

An optional software package that provides a graphical interface to assist in development of voice response applications on the Intuity CONVERSANT system (see also “Script Builder”).
**voice channel**

A channel that is associated with an interface to the telephone network (Tip/Ring, T1, E1, LSE1/LST1, or PRI). Any Intuity CONVERSANT system application can run on a voice channel. Voice channel applications can be initiated by being assigned to particular voice channels or dialed numbers to handle incoming calls or by a "soft seize" request to TSM from a DIP or the **soft_szr** command.

**voice processing co-marketer**

A company licensed to purchase voice processing equipment, such as the Intuity CONVERSANT system, to market and sell based on their own marketing strategies.

**voice response output process**

A software process that transfers digitized speech between system hardware (for example, Tip/Ring and SSP circuit cards) and data storage devices (for example, hard disk, etc.)

**voice response unit**

A computer connected to a telephone network that can play messages to callers, recognize caller inputs, access and update databases, and transfer and monitor calls.
voice system administration
The means by which you are able to administer both voice- and nonvoice-related aspects of the system.

VPC
voice processing co-marketer

VROP
voice response output process

VRU
voice response unit

warning
An admonishment or advisory statement used in Intuity CONVERSANT system documentation to alert the user to the possibility of equipment damage.
WholeWord speech recognition

An optional feature, available in several languages, based on whole-word technology that can recognize the numbers one through zero, “yes”, and “no” (the key words). This feature is reliable, regardless of the individual speaker. This feature can identify the key words when spoken in phrases with other words. A string of key words, called connected digits, can be recognized. During the prompt announcement, the caller can speak or use touch tones (or dial pulses, if available). See also “whole-word technology.”

whole-word technology

The ability to recognize an entire word, rather than just the phoneme or a part of a word. Compare to “subword technology.”

wink signal

An interruption of current to a busy lamp indicating that there is a line on hold.

word

A unique utterance understood by the recognizer.
**wordlist**
A set of words available for FlexWord recognition by an application during a Prompt & Collect action step.

**word spotting**
The ability to search through extraneous speech during a recognition.
