*1 Can be installed in the KX-TD1232 only.

*2 Can be installed in the KX-TD816 only.
Important Safety Instructions

When using your telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

a) Read and understand all instructions.

b) Follow all warnings and instructions marked on the product.

c) Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

d) Do not use this product near water, for example, near a bathtub, wash bowl, kitchen sink, or laundry tub, in a wet basement, or near a swimming pool.

e) Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious damage to the product.

f) Slots and openings in the cabinet and the back or bottom are provided for ventilation, to protect it from overheating, these openings must not be blocked or covered. The openings should never be blocked by placing the product on the bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register. This product should not be placed in a built-in installation unless proper ventilation is provided.

g) This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your dealer or local power company.

h) This product is equipped with a three wire grounding type plug, a plug having a third (grounding) pin. This plug will only fit into a grounding type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding type plug.

i) Do not allow anything to rest on the power cord. Do not locate this product where the cord will be abused by people walking on it.

j) Do not overload wall outlets and extension cords as this can result in the risk of fire or electric shock.

k) Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.

l) To reduce the risk of electric shock, do not disassemble this product, but take it to a qualified serviceman when some service or repair work is required. Opening or removing covers may expose you to dangerous voltages or other risks. Incorrect reassembly can cause electric shock when the appliance is subsequently used.

m) Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:

1) When the power supply cord or plug is damaged or frayed.

2) If liquid has been spilled into the product.

3) If the product has been exposed to rain or water.
4) If the product does not operate normally by following the operating instructions. Adjust only those controls, that are covered by the operating instructions because improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.

5) If the product has been dropped or the cabinet has been damaged.

6) If the product exhibits a distinct change in performance.

n) Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.

o) Do not use the telephone to report a gas leak in the vicinity of the leak.

SAVE THESE INSTRUCTIONS
Attention

- Keep the unit away from heating appliances and electrical noise generating devices such as fluorescent lamps, motors and televisions. These noise sources can interfere with the performance of the Digital Super Hybrid System.
- This unit should be kept free of dust, moisture, high temperature (more than 40°C / 104°F) and vibration, and should not be exposed to direct sunlight.
- Never attempt to insert wires, pins, etc. into the vents or other holes of this unit.
- If there is any trouble, disconnect the unit from the telephone line. Plug the telephone directly into the telephone line. If the telephone operates properly, do not reconnect the unit to the line until the trouble has been repaired by an authorized Panasonic Factory Service Center. If the telephone does not operate properly, chances are that the trouble is in the telephone system, and not in the unit.
- Do not use benzine, thinner, or the like, or any abrasive powder to clean the cabinet. Wipe it with a soft cloth.

WARNING

THIS UNIT MAY ONLY BE INSTALLED AND SERVICED BY QUALIFIED SERVICE PERSONNEL.

WHEN A FAILURE OCCURS WHICH RESULTS IN THE INTERNAL PARTS BECOMING ACCESSIBLE, DISCONNECT THE POWER SUPPLY CORD IMMEDIATELY AND RETURN THIS UNIT TO YOUR DEALER.

DISCONNECT THE TELECOM CONNECTION BEFORE DISCONNECTING THE POWER CONNECTION PRIOR TO RELOCATING THE EQUIPMENT, AND RECONNECT THE POWER FIRST.

THIS UNIT IS EQUIPPED WITH AN EARTHING CONTACT PLUG. FOR SAFETY REASONS THIS PLUG MUST ONLY BE CONNECTED TO AN EARTHING CONTACT SOCKET WHICH HAS BEEN INSTALLED ACCORDING TO REGULATIONS.

THE POWER SUPPLY CORD IS USED AS THE MAIN DISCONNECT DEVICE, ENSURE THAT THE SOCKET-OUTLET IS LOCATED / INSTALLED NEAR THE EQUIPMENT AND IS EASILY ACCESSIBLE.

TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE.
Accessory Order Information

- Replacement parts and accessories are available through your local authorized parts distributor.
- For ordering accessories, call toll free: 1-800-332-5368.

When you ship the product
Carefully pack and send it prepaid, adequately insured and preferably in the original carton. Attach a postage-paid letter, detailing the symptom, to the outside of the carton. DO NOT send the product to the Executive or Regional Sales offices. They are NOT equipped to make repairs.

Product service
Panasonic Factory Servicenters for this product are listed in the servicenter directory. Consult your authorized Panasonic dealer for detailed instructions.

The serial number of this product may be found on the label affixed to the bottom of the unit.
You should note the serial number of this unit in the space provided and retain this book as a permanent record of your purchase to aid in identification in the event of theft.

Introduction

This Installation Manual provides technical information for the Panasonic Digital Super Hybrid System, KX-TD816 / KX-TD1232. It is designed to serve as an overall technical reference for the system and includes a description of the system, its hardware and software, features and services and environmental requirements.

This manual contains the following sections:

Section 1, System Outline
Provides general information on the system including system capacity and specifications.

Section 2, General Installation
Contains the basic system installation and wiring instructions, as well as how to install the optional cards and units.

Section 3, ISDN Installation
Contains the ISDN unit installation and wiring instructions.

Section 4, T1 Installation
Contains the T1 unit installation and wiring instructions.

Section 5, Troubleshooting
Provides information for system and telephone troubleshooting.

Section 6, Index
Provides the important words and phrases to help you access the required information easily.

Terms used in this Installation Manual

Programming Guide References
The related and required programming titles described in the Programming Guide are noted for your reference.
Programming Guide reference is also shown in the sentences as follows.
Example: <SYS PRG [109]>
Explanation: Refer to system programme [109] in the Programming Guide.
This helps you know the related and require programming easily for the contents of the sentences.

Features Guide References
The related feature titles described in the Features Guide are noted for your reference.
About the other manuals

Along with this Installation Manual, the following manuals are available to help you know the available features, programme and use the KX-TD816 / KX-TD1232 system.

Features Guide
Provides information about the system features.

Programming Guide
Provides system programming instructions.

Users Manual
Provides operating instructions for the end users using proprietary telephones, single line telephones, consoles.
Telephone Company and F.C.C. Requirements and Responsibilities

1. Notification to the Telephone Company

Customers, before connecting terminal equipment to the telephone network, shall upon request of the Telephone Company, inform the Telephone Company of the particular line(s) to which such connection is made, the F.C.C. registration number (see the label on the bottom of the unit) and ringer equivalence number (REN) of the registered terminal equipment.

The REN is useful to determine the quantity of devices you may connect to your telephone line and still have all of those devices ring when your telephone number is called. In most, but not all areas, the sum of the REN's of all devices connected to one line should not exceed five (5.0). To be certain of the number of devices you may connect to your line, as determined by the REN, you should contact your local telephone company to determine the maximum REN for your calling area.

2. Connection to Telephone Line

This unit must not be connected to a coin operated line. If you are on a party line, check with your local telephone company.

3. Incidence of Harm to the Telephone Lines

Should terminal equipment cause harm to the telephone network, the telephone company shall, where practical, notify the customer that temporary discontinuance of service may be required.

However, where prior notice is not practical, the telephone company may temporarily discontinue service forthwith, if such action is reasonable in the circumstances. In case of such unnotified temporary discontinuance of service, the telephone company shall:

1) Promptly notify the customer of such temporary discontinuance of service.

2) Afford the customer the opportunity to correct the situation which gave rise to the temporary discontinuance.

3) Inform the customer of the right to bring a complaint to the Federal Communication Commission pursuant to the procedures set out in Subpart E of Part 68 of FCC Telephone Equipment Rules.

4. Compatibility of the Telephone Network and Terminal Equipment

a) Availability of telephone interface information.

Technical information concerning interface parameters and specifications not specified in FCC Rules, including the number of Ringers which may be connected to a particular telephone line, which is needed to permit Terminal Equipment to operate in a manner compatible with Telephone Company communications facilities, shall be provided by the Telephone Company upon customer's request.

The Telephone Company may make changes in its communications facilities, equipment, operations or procedures, where such action is reasonably required in the operation of its business and is not inconsistent with the rules and regulations in FCC Part 68.
If such changes can be reasonably expected to render any customer Terminal Equipment incompatible with Telephone Company Communications Facilities, or require modification or alteration of such Terminal Equipment, or otherwise materially affect its use or performance, the customer shall be given adequate notice in writing, to allow the customer an opportunity to maintain uninterrupted service.

**Notify the Telephone Company**

Installation must be performed by a qualified professional installer. If required, provide the telephone company with the following technical information:

- Telephone numbers to which the system will be connected
- Make: Panasonic
- Model: KX-TD816 / KX-TD1232
- FCC Registration No.: found on the bottom of the unit
- Ringer Equivalence No.: 0.4B
- Facility Interface Code: 02LS2, 02RV2-T, 02IS5
- Service Order Code: 9.0F, AS.2, 6.0P
- Required Network Interface Jack: RJ11 / 14C, RJ49

**Note**

Allowing this equipment to be operated in such a manner as to not provide for proper answer supervision is a violation of Part 68 of the FCC's rules.

and:

Proper answer supervision is when:

This equipment returns answer supervision to the PSTN when DID calls are:

- Answered by the called station
- Answered by the attendant
- Routed to a recorded announcement that can be administered by the CPE user.
- Routed to a dial prompt

This equipment returns answer supervision on all DID calls forwarded to the PSTN

Permissible exceptions are:

- A call is unanswered
- A busy tone is received
- A reorder tone is received

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
CAUTION

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this device.

When programming emergency numbers and/or making test calls to emergency numbers:
1. Remain on the line and briefly explain to the dispatcher the reason for the call before hanging up.
2. Perform such activities in the off-peak hours, such as early morning hours or late evenings.

Module Expansion

Expansion modules are used to increase the system capacity.

EXtra Device Port (XDP)

Each extension jack in the system supports the connection of a digital proprietary telephone / DSS Console and a single line device. The two devices per jack have different extension numbers and are treated as two completely different extensions.

Paralleled Telephone Connection

Every jack in the system also supports the parallel connection of a proprietary telephone and a single line device. They share the same extension number and are considered by the system to be one extension.

Super Hybrid System

This system supports the connection of digital and analog proprietary telephones, DSS Consoles and single line devices such as standard telephones, fax machines, and data terminals.
System Connection

With the addition of the optional System Inter Connection Card, two Digital Super Hybrid Systems can be connected together to expand the system to a maximum of 24 outside lines and 64 extensions. The two systems function as one, therefore, some functions such as paging and music-on-hold are duplicated.

ISDN Line Service

The system can manage a call received from the ISDN line by point-to-point or point-to-multi-point configuration. To use this service, an optional unit is required.

TIE Line Service

A TIE line is a privately leased communication line between two or more PBXs, which provides cost effective communications between company at different locations. To use this service, an optional unit is required.

T1 Line Service

A T1 line is at the bottom of the digital transmission hierarchy. The T1 line contains 24 voice channels. Voice is digitized by Pulse Code Modulation.

Digital Proprietary Telephones (DPT)

The system supports four different models of digital proprietary telephones which cover the range from a monitor set to a large display handsfree version.

Programming System

The system can be programed from a proprietary telephone or from a personal computer.

Voice Mail Integration

The system supports Voice Processing Systems with in-band DTMF signaling as well as DPT integration. The Panasonic Voice Processing System provides automated attendant, voice mail, interview and custom services.

Automatic Route Selection (ARS)

Automatically selects the pre-programed least expensive route for outgoing toll calls.

*1 Available for the KX-TD1232 only.
**Caller ID**
Allows the user to see the name or telephone number of a caller on the telephone display before answering a call.

**Trunk (Outside Line) Answer From Any Station (TAFAS)**
Ringing occurs over the external paging system; the call can be answered from any station.

**Remote Station Lock Control**
Allows an operator to lock an extension so that outgoing calls cannot be made.

**Uniform Call Distribution (UCD)**
Allows incoming calls to be distributed uniformly to a specific group of extensions.
1.2  Basic System Construction

1.2.1  Basic System Construction

The KX-TD816 Digital Super Hybrid System has a basic capacity of four outside lines and eight extensions, and the KX-TD1232 has eight outside lines and 16 extensions. They are capable of supporting Panasonic digital and analog proprietary telephones, DSS Consoles and single line devices such as standard telephones and fax machines.

To expand its capabilities, the system can be equipped with optional components or customer-supplied peripherals such as external speakers and external music sources (e.g., radios).
1.2.2 System Connection Diagram

KX-TD816

- External Music Source
- Amplifier
- Speaker
- Printer for SMDR or Personal Computer for System Programming
- Battery Adaptor KX-A46
- Two 12 VDC gel cell batteries, connected in series
- 120 VAC, 60 Hz
- AC Surge Protector

Avoid using the same AC outlet for office equipment and the KX-TD816. Use a dedicated AC outlet only.
Note

- It is recommended that extension of jack 1 is a display proprietary telephone.
- Parallel connection of telephones is possible. Refer to the Parallel Telephone Connection in 2.3.3 Telephone Connection.

Section 2

General Installation
2.1 Before Installation

2.1.1 Before Installation

Please read the following notes concerning installation and connection before installing the system and terminal equipment.

Safety Installation Instructions
When installing telephone wiring, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

a) Never install telephone wiring during a lightning storm.

b) Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.

c) Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.

d) Use caution when installing or modifying telephone lines.

Installation Precautions
This system is designed for wall mounting only. Avoid installing in the following places. (Doing so may result in malfunction, noise, or discoloration.)

a) In direct sunlight and hot, cold, or humid places. (Temperature range: 0°C – 40°C / 32°F – 104 °F)

b) Sulfuric gases produced in areas where there are thermal springs, etc. may damage the equipment or contacts.

c) Places in which shocks or vibrations are frequent or strong.

d) Dusty places, or places where water or oil may come into contact with the system.

e) Near high-frequency generating devices such as sewing machines or electric welders.

f) On or near computers, telexes, or other office equipment, as well as microwave ovens or air conditioners. (It is preferable not to install the system in the same room with the above equipment.)

g) Install at least 1.8 m (6 feet) away from radios and televisions. (Both the system and Panasonic proprietary telephones)

h) Do not obstruct area around the system (for reasons of maintenance and inspection — be especially careful to allow space for cooling above and at the sides of the system).
Wiring Precautions

Be sure to follow these instructions when wiring the unit:

a) Do not wire the telephone cable in parallel with an AC power source, computer, telex, etc. If the cables are run near those wires, shield the cables with metal tubing or use shielded cables and ground the shields.

b) If cables are run on the floor, use protectors to prevent the wires from being stepped on. Avoid wiring under carpets.

c) Avoid using the same power supply outlet for computers, telexes, and other office equipment. Otherwise, the system operation may be interrupted by the induction noise from such equipment.

d) Please use one pair telephone wire for extension connection of (telephone) equipment such as standard telephones, data terminals, answering machines, computers, voice processing systems, etc., except Panasonic proprietary telephones (e.g. KX-T7436, KX-T7235).

e) The Power Switch of the system must be off during wiring. After all of the wiring is completed, turn the Power Switch on.

f) Mis-wiring may cause the system to operate improperly. Refer to 5.1.1 Installation and 5.1.2 Connection.

g) If an extension does not operate properly, disconnect the telephone from the extension line and then connect again, or turn off the Power Switch of the system and then on again.

h) The system is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the purpose of the grounding-type plug.

i) Use twisted pair cable for outside line connection.

j) Outside lines should be installed with lightning protectors. For details, refer to 2.3.9 Installation of Lightning Protectors.

WARNING

Static sensitive devices are used. To protect printed circuit boards from static electricity, do not touch connectors indicated to the right. To discharge body static, touch ground or wear a grounding strap.
2.2 Installation of the Main Unit

2.2.1 Unpacking

Unpack the box and check the items below:

2.2.3 Wall Mounting

This set is designed for wall mounting only. The wall where the main unit is to be mounted must be able to support the weight of the main unit. If screws other than the ones supplied are used, use screws with the same diameter as the ones enclosed.

Mounting on Wooden Wall

1. Place the template (included) on the wall to mark the screw positions.

2. Install the screws (included) into the wall.

3. Hook the main unit on the screw heads.
Mounting on Concrete or Mortar Wall

1. Place the template (included) on the wall to mark the screw positions.

KX-TD816

KX-TD1232

2. Drill holes and drive the anchor plugs (user-supplied) with a hammer, flush to the wall.

To the wall surface
Concrete Wall

Anchor Plug

6.4 mm
(1/4 inch)

29 mm
(1 1/8 inch)

3. Install the screws (included) into the anchor plugs.

4. Hook the main unit on the screw heads.

KX-TD816

KX-TD1232
2.2.4 Opening Front Cover

1. Loosen the two screws on the right side of the main unit.

2. Open the front cover in the direction of arrow A.

Note
The two screws are attached to the front cover with springs so that they will not be lost.
2.2.5 Frame Ground Connection

**IMPORTANT**

*Connect the frame of the main unit to ground.*

1. Loosen the screw.
2. Insert the grounding wire.
3. Tighten the screw.
4. Connect the grounding wire to ground.

In most continental United States, the ground provided by the "Third wire ground" at the commercial power outlet will be satisfactory. However, in a small percentage of cases this ground may be installed incorrectly. Therefore, the following test procedure should be performed.

**Test Procedure**

1. Obtain a suitable voltmeter and set it for a possible reading of up to 250 VAC.
2. Connect the meter probes between the two main AC voltage points on the wall outlet. The reading obtained should be 108-132 VAC.
3. Move one of the meter probes to the 3rd prong terminal (GND). Either the same reading or a reading of 0 V should be obtained.
4. If a reading of 0 V at one terminal and a reading of 108-132 VAC at the other terminal is not obtained, the outlet is not properly grounded. This condition should be corrected by a qualified electrician (per article 250 of the National Electrical Code).
5. If a reading of 0 V at one terminal and a reading of 108-132 VAC at the other terminal is obtained, then set the meter to the "OHMS / RX1" scale, place one probe at the GND Terminal and the other probe at the terminal which gave a reading of 0 V. A reading of less than 1 ohm should be obtained. If the reading is not obtained the outlet is not adequately grounded, see a qualified electrician.
2.3 Connection

2.3.1 Outside Line Connection

Connection

1. Insert the modular plugs of the telephone line cords (4-conductor wiring) into the modular jacks on the system.
2. Connect the line cord to the terminal board or the Central Office jack.

KX-TD816

Use 4-conductor wiring cord

To Terminal Board or Modular Jacks from the Central Office.
KX-TD1232

Use 4-conductor wiring cord

To Terminal Board or Modular Jacks from the Central Office.

**Notice**
- Use twisted pair cable for installation.
- It is recommended to use RJ14C telephone jacks.
- Mis-connection may cause the system to operate improperly. See 5.1.1 Installation and 5.1.2 Connection before Connection.
2.3.2 Extension Connection

KX-TD816
Extension jacks 1 through 8 are for all kinds of telephones.

Maximum Cabling Distance
The maximum length of the extension line cord (twisted cable) which connects the system and the extension is as follows:

<table>
<thead>
<tr>
<th></th>
<th>Diameter of the line</th>
<th>Max. length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard Telephone</td>
<td>22AWG</td>
<td>1798m (5900 feet)</td>

<td>229m (750 feet)</td>
</tr>
<tr>
<td></td>
<td>26AWG</td>
<td>140m (460 feet)</td>
</tr>
</tbody>
</table>

Telephone Wiring
2 or 4-conductor wiring is required for each extension as listed below. There are four pins for possible connection: "T", "R", "D1" and "D2".

T: Tip  
R: Ring  
D1: Low  
D2: High

<table>
<thead>

Telephone Wiring

2, 4 or 6-conductor wiring is required for each extension as listed below. There are six pins for possible connection: "T", "R", "D1", "D2", "P1" and "P2".

T: Tip
R: Ring
D1: Low
D2: High
P1:3 Pair Voice (OHCA)
P2:3 Pair Voice (OHCA)

*3-pair twisted cabling:*

![Diagram of 3-pair twisted cabling](image)
Connection

1. Insert the 50-pin connector to the Extension Jack as shown.
2. Connect the wire cords to the appropriate connector pins and the terminal equipment. Refer to the Telephone Wiring (Page 49) and Pin Number Chart (Page 51).

3. After inserting the connector, fasten the connector with the nylon tie.

### Note

**"8EXTN" in the table indicates an extension expansion area for 8-Station Line Unit (KX-TD170) or 8-Station Line Unit with SLT CID (KX-TD171).

System Programming is required for card location identification.

- If a telephone or answering machine with an A-A1 relay is connected to the main unit, set the A-A1 relay switch of the telephone or answering machine to OFF position.
- Mis-connection may cause the system to operate improperly. See 5.1.1 Installation and 5.1.2 Connection.
- Up to four DSS Consoles (KX-T7440, KX-T7441, KX-T7240 or KX-T7040) can be installed per system. As the DSS Console itself cannot work alone, it always requires a proprietary telephone used in pair. Place the DSS Console and the paired telephone side by side on your desk.
- It is necessary to designate the jack numbers of paired DSS Consoles and proprietary telephones by system programming.
- After completing all the required inside cabling, including outside lines, extensions, external pagers and external music sources, fasten the cables with the nylon tie (included) as shown.

[109] Expansion Unit Type

**Features Guide Reference**

DSS Console

Module Expansion
2.3.3 Telephone Connection

**Proprietary Telephone / DSS Console Connection**

Connect proprietary telephones and DSS Consoles as follows:

**Analogue Proprietary Telephone**

![Diagram of telephone connection]

- Include telephone line cord
- Connect to a Digital Super Hybrid System (TO EMSS).
KX-T7200 Series Digital Proprietary Telephone

- Connect to a standard telephone jack, Telephone Answering Machine, or FAX for XDP or parallel connections (TO TEL).
- Connect to a Digital Super Hybrid System (TO EMSS).

KX-T7400 Series Digital Proprietary Telephone

- Connect to a Digital Super Hybrid System (TO MAIN UNIT).
- Connect to a standard telephone jack, Telephone Answering Machine, or FAX for XDP or parallel connections (TO TEL).
KX-T7400 DSS Console / KX-T7240 Digital DSS Console

Included telephone line cord

→ Connect to a Digital Super Hybrid System (TO EMSS).

KX-T7440 / KX-T7441 Digital DSS Console

Included telephone line cord

→ Connect to a Digital Super Hybrid System (TO MAIN UNIT).

KX-T7440 and KX-T7441 can be connected to a KX-T7400 series digital proprietary telephone.
Use the attached plates and screws as follows.
Paralleled Telephone Connection

Any standard telephone can be connected in parallel with a proprietary telephone as follows:

Method 1: Using a Modular T-Adaptor

Any standard telephone can be connected in parallel with a proprietary telephone as follows:

- Modular T-Adaptor (Panasonic KX-J66 or USOC RJA2X)
- 2-conductor wiring cord: Connect pins “T” and “R”.
- 4-conductor wiring cord:
  - For DPT: Connect pins “D1” and “D2” only. (“T” and “R” are not necessary.)
  - For APT: Connect pins “T2”, “R”, “D1” and “D2”.

Digital or Analogue Proprietary Telephone

Standard Telephone

Note

- The KX-TD1232 is illustrated as the main unit.
- The 6-conductor wiring cord (and the Modular T Adaptor KX-J36) is required if the proprietary telephone KX-T7130 is to be used for parallel connection for KX-TD1232.
Method 2: For Digital Proprietary Telephones only

Note
- The KX-TD1232 is illustrated as the main unit.
- Not only a standard telephone but a single line device such as an answering machine, a facsimile or a modem (personal computer) etc. can be connected in parallel with a proprietary telephone.
- If a standard telephone with a Caller ID feature is connected in parallel, the Caller ID feature will not function.

Features Guide Reference
Paralleled Telephone
2.3.4 EXtra Device Port (XDP) Connection

A digital proprietary telephone and a standard telephone can be connected to the same extension jack yet have different extension numbers (eXtra Device Port feature). System Programming is required for this jack.

Method 1

4-conductor wiring cord
Connect pins "D1" and "D2" only. ("T" and "R" are not necessary.)

2-conductor wiring cord
Connect pins "T" and "R".

Digital Proprietary Telephone

Standard Telephone

Note
The KX-TD1232 is illustrated as the main unit.

Method 2
Section 2.3.4 "Telephone Connection, Paralleled Telephone Connection, Method 2: for Digital Proprietary Telephone only" is also available for XDP connection.

Programming Guide Reference
[600] EXtra Device Port

Features Guide Reference
EXtra Device Port (XDP)
2.3.5 Polarity Sensitive Telephone Connection

If your telephone is polarity sensitive, follow the procedure below:

1. Complete all the required extension wiring.
2. Confirm that dialing can be done from all the extensions using a touch-tone telephone. If dialing fails, the polarity between the extension and the system must be reversed.
3. Reverse as shown.

4. Set the Power Switch to "OFF" position.
5. Connect all outside lines.
6. Confirm that dialing can be done on the following extensions using a tone telephone.

**KX-TD816**
- Extension (T, R) of jack 1: Outside line 1
- Extension (T, R) of jack 2: Outside line 2
- Extension (T, R) of jack 9 and 10 (Extension Expansion Card): Outside line 5 and 6

**KX-TD1232**
- Extension (T, R) of jack 1: Outside line 1
- Extension (T, R) of jack 2: Outside line 2
- Extension (T, R) of jack 9: Outside line 3
- Extension (T, R) of jack 10: Outside line 4

Extensions (T, R) of jacks 17 and 18 (Extension Expansion Card 1): Outside line 9 and 10

(Note: Extensions of jacks 9 and 10 for KX-TD816, and 17 and 18 for KX-TD1232 depend on the Power Failure Transfer connection. For details, refer to 2.5.1 Auxiliary Connection for Power Failure Transfer.)

If dialing fails, the polarity between the system and the outside line must be reversed.
7. Reverse as shown.

8. Every time an extension telephone is replaced, repeat the above procedure.

**Note**
The KX-TD1232 is illustrated as the main unit.
2.3.6 External Pager (Paging Equipment) Connection

**KX-TD816**

One external pager (user-supplied) can be connected to the KX-TD816 as illustrated below. Use an RCA connector and shielded cable.

- **Output impedance**: 600 Ω
- **Maximum length of the cable**
  - AWG 18 — 22: Under 10 m (33 feet)
KX-TD1232

Up to two external pagers (user-supplied) can be connected to the KX-TD1232 per system as illustrated below.

Use an RCA connector and shielded cable.

- Output impedance: 600 Ω
  
  **Maximum length of the cable**
  
  AWG 18 — 22: Under 10 m (33 feet)

---

**Note**

- System Connection permits a maximum of four external pagers.
  It is programmable which external pager will send background music and whether all the pagers will generate a confirmation tone.
- To adjust the sound level of the pagers, use the volume control on the amplifiers.

**Programming Guide Reference**

- [804] External Pager BGM
- [805] External Pager Confirmation Tone

**Features Guide Reference**

- Background Music (BGM)
- Paging — All
- Trunk (Outside Line) Answer From Any Station (TAFAS)

* Available for the KX-TD1232 only.
2.3.7 External Music Source Connection

**KX-TD816**

One music source such as a radio (user-supplied) can be connected to the KX-TD816 as illustrated below.

Insert the plug to the earphone / headphone jack on the external music source. Use a two-conductor plug {3.5 mm (9/64 inch) in diameter}.

- Input impedance: 8 Ω

  **Maximum length of the cable**
  - AWG 18 — 22: Under 10 m (33 feet)

![External Music Source Connection Diagram](image-url)
KX-TD1232
Up to two music sources such as a radio (user-supplied) can be connected to the KX-TD1232 per system as illustrated below.
Insert the plug to the earphone / headphone jack on the external music source.
Use a two-conductor plug (3.5 mm (9/64 inch) in diameter).

- Input impedance: 8 Ω
- Maximum length of the cable
  AWG 18 — 22: Under 10 m (33 feet)

Note
- System Programming of music sources used for Music on Hold and Background Music is required.
- To adjust the sound level of the Music on Hold, use the volume control on the external music source.

Programming Guide Reference
[803] Music Source Use
[990] System Additional Information

Features Guide Reference
Background Music (BGM)
Background Music (BGM) — External
Music on Hold
2.3.8 Printer and PC Connection

A user-supplied printer or personal computer (PC) can be connected to the system. These are used to print out or refer to the Station Message Detail Recording (SMDR) call records and system programming data.

Connect the printer cable or the PC cable to the Serial Interface (RS-232C) connector. The cable must be shielded and the maximum length is 2 m (6.5 feet).

Note

The KX-TD1232 is illustrated as the main unit.

Arrange cables so that the printer will be connected to the system as shown in the chart on the following page.

When using special accessories such as cable, the user should use those specified in this installation manual to comply with the limits for a class A digital device pursuant to the FCC Rules.
The pin configuration of Serial Interface (RS-232C) Connector is as follows:

**Note**
Please read your printer manual and connect the first EIA pin (FG) of this unit to the printer cable.

**Serial Interface (RS-232C) Signals**

**Frame Ground: FG**
Connects to the unit frame and the earth ground conductor of the AC power cord.

**Transmitted Data: SD (TXD):** (output)
Conveys signals from the unit to the printer. A "Mark" condition is held unless data or BREAK signals are being transmitted.

**Received Data: RD (RXD):** (input)
Conveys signals from the printer.

**Request to Send: RS (RTS):** (output)
This lead is held ON whenever DR (DSR) is ON.

**Clear To Send: CS (CTS):** (input)
An ON condition of circuit CS (CTS) indicates that the printer is ready to receive data from the unit. The unit does not attempt to transfer data or receive data when circuit CS (CTS) is OFF.

**Data Set Ready: DR (DSR):** (input)
An ON condition of circuit DR (DSR) indicates the printer is ready. Circuit DR (DSR) ON does not indicate that communication has been established with the printer.

**Signal Ground: SG**
Connects to the DC ground of the unit for all interface signal.

**Data Terminal Ready: ER (DTR):** (output)
This signal line is turned ON by the unit to indicate that it is ON LINE. Circuit ER (DTR) ON does not indicate that communication has been established with the printer. It is switched OFF when the unit is OFF LINE.
Data Carrier Detect: CD (DCD): (input)
The ON condition is an indication to data terminal (DTE) that the carrier signal is being received.

2.3.9 Installation of Lightning Protectors

Overview
A lightning protector is a device to be installed on an outside line to prevent a dangerous surge from entering the building and damaging equipment. A dangerous surge can occur if a telephone line comes in contact with a power line. Trouble due to lightning surges has been showing a steady increase with the development of electronic equipment. In many countries, there are regulations requiring the installation of a lightning protector. A lightning strike to a telephone cable which is 10 m (33 feet) above ground can be as high as 200,000 V. This system should be installed with lightning protectors. In addition, grounding (connection to earth ground) is very important for the protection of the system.

Recommended lightning protectors
• TELESPIKE BLOK MODEL TSB (TRIPPE MFG. CO.)
• SPIKE BLOK MODEL SK6-0 (TRIPPE MFG. CO.)
• Super MAX™ (PANAMAX)
• MP1 (ITW LINK)

Installation

CO: Central Office (Outside line)
EXTN: Extension line
TEL: Telephone
**Outside Installation Diagram**

If you install an extension outside of the main building, the following precautions are recommended:

- **a)** Install the extension wire underground.
- **b)** Use a conduit to protect the wire.

**Note**

- The lightning protector for an extension is different from that for outside line.
Earth Rod Installation Diagram

1. Installation location of the earth rod: Near the protector
2. Check obstructions: None
3. Composition of the earth rod: Metal
4. Depth of the earth rod: More than 50 cm (20 inches)
5. Size of the grounding wire: Thickness is more than 16 AWG

Note
- The above figures are recommendations only.
- The length of earth rod and the required depth depend on the composition of the soil.
2.4 Installation of Optional Cards and Unit

2.4.1 Location of Optional Cards and Units

The location of the optional cards and units is shown below.

Precaution
To protect the printed circuit boards (P-boards) from static electricity, do not touch parts on the P-boards in the main unit and on the optional cards.

Expansion Units

KX-TD816
The following expansion units can be installed to any of the two expansion areas.

- One extension line unit
  - 8-Station Line Unit, KX-TD170
  - 8-Station Line Unit with SLT CID, KX-TD171

- One outside line unit or DID line unit
  - 4-CO Line Unit, KX-TD180
  - 4-DID Line Unit, KX-TD185

- One Remote Unit
  - Remote Unit, KX-TD198

Remove the front cover plate(s).

Note
System Programming is required for expansion unit location. Refer to [109] Expansion Unit Type.
Default:
Area 1 = 4-CO Line Unit,
Area 2 = 8-Station Line Unit.
KX-TD1232

The following expansion units can be installed to any of the three expansion areas.

- Max. two extension line units
  - 8-Station Line Unit, KX-TD170
  - or
  - 8-Station Line Unit with SLT CID, KX-TD171

- One outside line unit or DID line unit
  - 4-CO Line Unit, KX-TD180
  - or
  - 4-DID Line Unit, KX-TD185

Remove the cover plate(s) on the front cover.

Note

System Programming is required for expansion unit location. Refer to [109] Expansion Unit Type.

Default:
Area 1 = 4-CO Line Unit,
Area 2 and 3 = 8-Station Line Unit.
Doorphone Card for KX-TD816

Install Doorphone Card, KX-TD160. This card connects two doorphones and two door openers.

Remote Card, System Inter Connection Card, DISA Card, Doorphone Card for KX-TD1232

Install Remote Card, KX-TD196, or High Speed Remote Card, KX-TD197. This card provides data communications between the system and a remote location.

Install System Inter Connection Card, KX-TD192. This card connects two systems.

Install DISA Card, KX-TD191. This card permits access to the system from outside tone telephones.

Install Doorphone Card, KX-TD160. This card connects two doorphones and two door openers.
2.4 Installation of Optional Cards and Unit

**Caller ID Cards, PLL Card**

Up to two **Caller ID Cards** (KX-TD193) for KX-TD816, and up to three Caller ID Cards for KX-TD1232 can be installed to the initially provided Outside Line Card and 4-CO Line Unit. This card supports Caller ID services offered by the central office. The initially provided Outside Line Card is located behind the inside cover.

**PLL (Phase Locked Loops) Card** (KX-TD112) synchronizes the system clock with the clock of the ISDN network. This card must be installed to the CPU Board before the ISDN Line Unit is installed.

**KX-TD816**
Initial Outside Line Card
Install one **Caller ID Card**, KX-TD193.

**KX-TD1232**
Initial Outside Line Card
Install up to two **Caller ID Cards**, KX-TD193.

**Inside cover**

**CPU Board**
Install **PLL Card**, KX-TD112.

**Inside cover**

4-CO Line Unit, KX-TD180
(inside the cabinet)
Install one **Caller ID Card**, KX-TD193.
SLT Message Waiting Lamp Adaptor Unit

One SLT Message Waiting Lamp Adaptor Unit (KX-TD194) for KX-TD816, and up to two SLT Message Waiting Lamp Adaptor Units for KX-TD1232 can be installed. This card supports the Message Waiting feature for a standard telephone with a message waiting lamp. One adaptor supports 16 extensions.

**Connection Example**

![Diagram of SLT Message Waiting Lamp Adaptor Unit setup](image)

**Notice**

DC connection cables

*If each unit is connected to an AC outlet, these cables are not necessary.*

**System Connection**

To KX-A46

KX-A46

Car battery

**Note**

Do not connect more than four units with DC connection cables.
2.4.2 4-CO Line Unit Connection

To add four outside lines (outside lines 5 through 8 for KX-TD816, and outside lines 9 through 12 for KX-TD1232), use the optional 4-CO Line Unit (KX-TD180). This unit can be installed to any of the expansion unit areas provided on the front of the main unit. For outside line expansion unit installation, see 2.4.6 Installing Expansion Unit.

Note

• System Programming is required for card location identification.
• If you intend to attach a Caller ID Card to the 4-CO Line Unit, attach the Caller ID Card before outside line connection. See 2.4.8 Caller ID Card Installation.

Features Guide Reference

Module Expansion
2.4.3 8-Station Line Unit Connection

To add eight extensions (jack numbers 9 through 16 for KX-TD816, and jack numbers 17 through 24 or 25 through 32 for KX-TD1232), use the optional 8-Station Line Unit (KX-TD170). To add 16 extensions for KX-TD1232 (jack numbers 17 through 32), use two 8-Station Line Units.

This unit can be installed to any of the expansion unit areas provided on the front of the main unit.

For extension expansion unit installation, see 2.4.6 Installing Expansion Unit.

**Note**
System Programming is required for card location identification.

**Programming Guide Reference**

[109] Expansion Unit Type

**Features Guide Reference**

Module Expansion
2.4.4 8-Station Line Unit with SLT CID Connection

The optional 8-Station Line Unit with SLT CID (KX-TD171) adds eight extensions (jack numbers 9 through 16 for the KX-TD816, and jack numbers 17 through 24 or 25 through 32 for the KX-TD1232) in which either one of two ports enables the Caller ID feature for display standard telephone users.

To add 16 extensions, including 2 extensions with SLT Caller ID feature, for the KX-TD1232 (jack numbers 17 through 32), use two Extension Cards with SLT CID.

This unit can be installed to any of the expansion unit areas provided on the front of the main unit.

For installation, see 2.4.6 Installing Expansion Unit.

Note
System Programming is required for card location identification.

Programming Guide Reference

Module Expansion
2.4.6 Installing Expansion Unit

The following procedures can be used to install the optional expansion units. The following steps 1 through 5 and 7 through 10 are the same for all expansion units. Step 6 is different for each unit. The KX-TD1232 is illustrated as the main unit.

1. Loosen the two screws on the cover plate. Insert fingers into the slits to remove the cover plate.

![Diagram of cover plate with slits indicated]

**Note**

Any of the cover plates can be removed, as needed.

2. Connect the cabinet cord to the connector in the main unit firmly.

![Diagram of connecting cabinet cord]
3. Hook the cabinet on the main unit and slide the cabinet to the left until it is secured.

4. Loosen the outside screw and slide the cover to the right.

5. Secure the inside screw (included) to fix the cabinet to the main unit.

**Note**

Be sure to fix the inside screw to the main unit, or the unit may not work properly.
6. (If a option is to be installed)

If a KX-TD180 / KX-TD185 is to be installed; (for KX-TD1232)
Insert the modular plugs of the telephone line cords (4-conductor wiring) into the modular jacks on the unit.

![Diagram of modular plugs and jacks]

To Terminal Board or Modular Jacks from the Central Office

**Note**
- For details, refer to 2.5.1 Auxiliary Connection for Power Failure Transfer.
- DID lines of the KX-TD185 are polarity sensitive.
If a KX-TD170 / KX-TD171 is to be installed; (for KX-TD1232)

Insert the connector into the jack.

Note
- For details, refer to 2.5.1 Auxiliary Connection for Power Failure Transfer.
- For cable pin numbers to be connected, see "Pin Number Chart" in 2.3.2 Extension Connection.
- For fixing the connector, see "Amphenol 57JE Type (screw-attach-type 50-pin connector) Connection for KX-TD170 / KX-TD171" in 2.4.6 Installing Expansion Unit.
7. Tie all of the cords into a bundle. If other cords are exposed in the upper cabinets, tie them also.

8. Close the cabinet cover and secure the outside screw.

9. Cover the cords with the cord holder (included).

10. Fix the cords to the wall as shown so that the front cover can be opened.
Note

- If you attach the Caller ID Card (KX-TD193) to the 4-CO Line Unit (KX-TD180), attach it before installing the 4-CO Line Unit to the main unit. For installation, Refer to 2.4.8 Caller ID Card Installation.

- If two expansion units are installed, cut the cabinet cover(s) on the lower cabinet(s) to allow the cords from upper cabinet to go down through the cabinet cover(s). To protect the cords, smooth the cut edges.

![Cut here]
Amphenol 57JE Type (screw-attach-type 50-pin connector) Connection for KX-TD170 / KX-TD171

To fix the Amphenol 57JE type (screw-attach type 50-pin connector) to the 8-Station Line Unit or the 8-Station Line Unit with SLT CID, follow the procedure below.

1. The 50-pin connector (Jack) on the Expansion Unit has two hook-pins. Remove the upper hook-pin, and take out the screw.

Note

When installing a connector like the type shown below, unscrew the lower hook-pin also. Then drive both accessory screws.
2. To attach the Amphenol 57JE type (Plug) to the connector, drive the accessory screw into the upper part. Fasten the accessory wire tie around the lower hook-pin and the Amphenol 57JE type, as shown.
2.4.7 DISA Card and Remote Card / Unit Installation

The DISA Card (KX-TD191), Remote Card (KX-TD196), High Speed Remote Card (KX-TD197) and Remote Unit (KX-TD198) can be installed as follows.

<table>
<thead>
<tr>
<th>Main Unit</th>
<th>For DISA feature</th>
<th>For remote access</th>
</tr>
</thead>
<tbody>
<tr>
<td>KX-TD816</td>
<td></td>
<td>KX-TD198</td>
</tr>
<tr>
<td>KX-TD1232</td>
<td>KX-TD191</td>
<td>KX-TD196, KX-TD197</td>
</tr>
</tbody>
</table>

**Note**

If you use the KX-TD170 with the KX-TD198, you must use the KX-TD170 which has suffix 'C' or later.

The former KX-TD170 dose not work properly with KX-TD198.

This is available for the KX-TD816 only.

Please see the back of the unit and check suffix.

**How to distinguish suffix**

![Image of serial number label with arrow pointing to 'C' and suffix/UNIT No.]

Serial No. LABEL

XXXXX C XXXXXXX

Suffix UNIT No.
KX-TD816

Installing the Remote Unit (KX-TD198)

1. Loose the two screws on the cover plate. Insert your fingers into the slits to remove the cover plate.

![Diagram of cover plate]

Note
There are two cover plates. Any of them can be removed, as needed.

2. Connect the cabinet cord to the connector in the main unit firmly.

![Diagram of connection]

3. Hook the cabinet onto the main unit and slide the cabinet to the left until it is secured.
Attaching another line expansion unit to the Remote Unit (KX-TD198) and install them to the system.

1. Remove the front cover of the Remote Unit. Set the MODE switch to 2 only.

2. Attach the expansion unit to the Remote Unit as shown below. Be sure to connect the cabinet cords by inserting the expansion unit cabinet cord through the slot in the Remote Unit.

3. Remove the cover plate and connect the cabinet cord to the connector in the main unit firmly.
4. Hook the cabinets onto the main unit and slide the cabinets to the left until they are secured.

5. Loosen the outside screw of the expansion unit and slide the cover to the right.

6. Secure the inside screw (inside with the Remote Unit) to fix the cabinet to the main unit.

7. Tie all of the cords into a bundle. If other cords are exposed from the upper cabinets, tie them also.

8. Close the cabinet cover and secure the outside screw.

9. Cover the cords with the cord holder. If two cabinets are connected together and attached to the main unit, use the cord holder included with the Remote Unit.

10. Fix the cords to the wall as shown here, so that the front cover can be opened.
KX-TD1232

**Installing the DISA Card (KX-TD191)**

1. Insert the upper side of the DISA Card into the two hooks on the main unit.

2. Press down the two corners of the lower side of the DISA Card.

3. Connect the cord to the DISA Card Connector.

**Features Guide Reference**

Direct Inward System Access (DISA)
Installing the Remote Card (KX-TD196) or High Speed Remote Card (KX-TD197)

1. Insert the upper side of the Remote Card into the two hooks on the main unit.

2. Press down the two corners of the lower side of the Remote Card.

3. Connect the cord to the Remote Card Connector.

System Programming and Diagnosis with Personal Computer
2.4.8 Caller ID Card Installation

A maximum of two Caller ID Cards (KX-TD193) can be installed to the KX-TD816, and a maximum of three Caller ID Cards can be installed to the KX-TD1232. The Caller ID Cards can be installed to the initially provided Outside Line Card and / or to an optional 4-CO Line Unit (KX-TD180), as required.

The Outside Line Card of KX-TD816 can attach one Caller ID Card, and the Outside Line Card of KX-TD1232 can attach two Caller ID Cards. 4-CO Line Unit can attach one Caller ID Card.

Installing to the Initial Outside Line Card for KX-TD816

1. Loosen the four screws to open the inside cover of the main unit.

Note

If any cards, units, or cords are installed to the main unit, remove them beforehand.

2. Insert the Caller ID Card to the connectors on the Outside Line Card.

One card can be installed to the initial Outside Line Card.

3. Put the inside cover back on the main unit and secure the screws.
Installing to the Initial Outside Line Card for KX-TD1232

1. Loosen the nine screws to open the inside cover of the main unit.

Note

If any cards, units, or cords are installed to the main unit, remove them beforehand.

2. Insert the Caller ID Card(s) to the connectors on the Outside Line Card.
   Up to two cards can be installed to the initial Outside Line Card.

3. Put the inside cover back on the main unit and secure the screws.
Installing to the Optional 4-CO Line Unit

The following procedure must be done before installing the 4-CO Line Unit (KX-TD180) to the main unit.

1. Loosen the five screws located at the rear of the 4-CO Line Unit.
2. Remove the back plate and take out the P-board.
3. Attach the Caller ID Card to the P-board, fitting the connectors.
4. Put the P-board back into the cabinet and fix the rear plate with the five screws.

Note
For installing the 4-CO Line Unit to the main unit, refer to 2.4.6 Installing Expansion Unit.

Caller ID
2.4.9 Doorphone and Door Opener Connection

To connect up to two doorphones (KX-T30865) and up to two door openers (user-supplied), a Doorphone Card (KX-TD160) is required.

Installing the Doorphone

1. Loosen the screw to separate the doorphone into two halves.

![Screw](image)

2. Install the base cover to the wall with two screws.

![Screw](image)

Note

Two kinds of screws are included. Please choose the appropriate one depending on your wall type:

- Type 1: When the doorphone plate has been fixed to the wall.
- Type 2: When you wish to install the doorphone directly to the wall.

3. Connect the wires to the screws located in the front cover.

To the terminal box (See "Wiring of the Doorphone").

4. Secure both halves together and re-install the screw.
Doorphone Card Installation

1. Connect a 4-conductor modular connector to the Doorphone Card Cabinet, and pass the cord through the groove in the cabinet.

2. Attach the Doorphone Card Cabinet to the main unit and press down.
3. Connect the cord to the Doorphone Card Connector.

KX-TD1232  KX-TD816

To Terminal Box Installation
Wiring of the Doorphone

1. Connect the Doorphone Card to the terminal box using a 4-conductor modular connector.
2. Connect the wires of doorphone 1 to the red and green screws of the terminal box.
3. Connect the wires of doorphone 2 to the yellow and black screws of the terminal box.

KX-TD816

KX-TD1232
Connecting Door Openers

1. Loosen the screw to remove the cover.

2. Loosen the screws on the terminal strip.
3. Insert the wires coming from the door openers into holes and tighten the screws.

Note
- The KX-TD1232 is illustrated as the main unit.
- Set the door opener paired with the doorphone.
- For wiring, UL 1015, AWG 22 twisted wire or the equivalent is recommended.
- The wire should be between 1.2 and 2.4 mm (3/64 and 3/32 inch) in diameter including the coating.

\[ D=1.2-2.4 \text{ mm (3/64-3/32 inch)} \]
Maximum cabling distance of the doorphone and the door opener line

The maximum length of the doorphone and door opener line that connects to the main unit is shown below:

- 26 AWG: Under 70 m (230 feet)
- 24 AWG: Under 113 m (370 feet)
- 22 AWG: Under 180 m (590 feet)

**Note**
The KX-TD1232 is illustrated as the main unit.

*1 This is the maximum current when three TD194s are connected by DC input / output interfaces (only the main TD194 is connected to an AC outlet).
WARNING
THIS UNIT MAY ONLY BE INSTALLED AND SERVICED BY QUALIFIED SERVICE PERSONNEL.

Wall Mounting
This unit can be mounted to a wall. Refer to 2.2.3 Wall Mounting

Opening the front cover
1. Loosen the screw.
2. Slide the cover while pressing the mark.

Note
The screw cannot be removed from the unit.
Frame Ground Connection

**IMPORTANT**

*Connect the system frame to the ground.*

1. Loosen the screw.
2. Insert the grounding wire.
3. Tighten the screw.
4. Connect the grounding wire to the ground.

![Diagram of frame ground connection](image)

In most of the continental United States, the ground provided by the "Third wire ground" at the commercial power outlet will be satisfactory. However, in a small percentage of cases this ground may be installed incorrectly. Therefore, the following test procedure should be performed.

**Test Procedure**

1. Obtain a suitable voltmeter and set it for a possible reading of up to 250 VAC.
2. Connect the meter probes between the two main AC voltage points on the wall outlet. The reading should be 108 – 132 VAC.
3. Move one of the meter probes to the 3rd prong terminal (GND). Either the same reading or a reading of 0 V should be obtained.
4. If a reading of 0 V at one terminal and a reading of 108 – 132 VAC at the other terminal is not obtained, the outlet is not properly grounded. This should be corrected by a qualified electrician (per article 250 of the National Electrical Code).
5. If a reading of 0 V at one terminal and a reading of 108 – 132 VAC at the other terminal is obtained, then set the meter to the "OHMS / RX1" scale, place one probe at the GND Terminal and the other probe at the terminal which gave a reading of 0 V. A reading of less than 1 ohm should be obtained. If the reading is not obtained, the outlet is not adequately grounded. See a qualified electrician.
Inserting the Connector

1. Insert the two 50-pin connectors to the jacks as shown below.
   The connector "TO SYSTEM" should be connected to the cable which is connected to the KX-TD816 / KX-TD1232.
   Also, the connector "TO EXTN" should be connected to the cable which is connected to the extensions.

2. Insert the cables through the binders.

3. If two units are connected with the DC IN / OUT or a KX-A46 is connected to the unit, insert the 4-pin connectors to the jacks as shown below.
   Also connect the ground terminal of the unit to the minus (−) terminal of a car battery using an earth wire.
Note
Please make sure that the unused terminal* does not touch the car battery terminals.

To another
KX-TD194 or
KX-A46
(See "SLT Message Waiting Lamp Adaptor Unit," "Location of Optional Cards and units" in this section
for a connection example.)

</table>
Closing the Front Cover

1. Fasten the binders.

2. Replace the cover and tighten the screw.

3. Tie together all of the connected cords and attach them to the wall so that the cords cannot be pulled out of the system.
Starting the unit

Plug the AC cord into the system AC inlet and an AC outlet.
Avoid sharing the AC outlet of this system with other office equipment. Use a dedicated AC outlet only.

CAUTION

The power supply cord is used as the main disconnect device. Ensure that the socket-outlet is located / installed near the equipment and is easily accessible.
2.4.11 System Connection

To connect two main units, use the optional System Inter Connection Cards (two) and the Connection Cable (included in the cards).

1. Insert the upper side of the System Inter Connection Card into two hooks on the main unit (Master System).

2. Press down the two corners of the lower side of the System Inter Connection Card.
3. Connect the cord to the System Inter Connection Card connector.

4. Open the latch on the card.
5. Repeat steps 1 through 4 for the Slave System, using the other card.
6. Insert one Connection Cable end into the Master System and insert the other end into the Slave System.

* Available for the KX-TD1232 only.
7. Close the latches on both systems.

8. Open the ROM Cover in the Slave System and set the Master / Slave Switch on the CPU Card to "Slave" position.

9. Turn the power on.

Note
- System Connection is completed about three minutes after the power is turned on. To confirm System Connection completion, try to call a Slave System extension from a Master System extension.
- To turn the power on for the first time, refer to Section 2.6 "Starting the System for the First Time".
- The master and slave must have the same version software. Otherwise, System Connection will not work properly.
- When you install an ISDN Line Unit, you should install it to the Master System first and then the Slave System. If only installed to the Slave System, noise may occur.
Programming Guide Reference
   No programming required.

Features Guide Reference
   System Connection
2.4.12 Battery Adaptor Connection

User-supplied gel cell batteries can be used as a backup power supply in the event of a power failure. In case of a power failure, the batteries automatically maintain power to the main unit. The optional Battery Adaptor, model KX-A46, is required. The Battery Adaptor should not be exposed to direct sunlight. Keep the adaptor and gel cell batteries away from heating appliances and fire. Place gel cell batteries in a well ventilated place.

Connection

When connecting the battery adaptor, keep the following in mind.

- Check the polarities of batteries and wires.
- Make sure that you do not short the batteries and wires.
- To connect the two batteries, use an accessory wire.

1. Assemble the cords and two gel cell batteries (12 VDC each) as shown.
2. Insert the plug of the battery adaptor into the battery adaptor connector on the main unit. Connect the ground wire to the ground terminal on the main unit.

3. Turn on the power switch of the battery adaptor.

Wall Mounting

1. Drive the four small accessory screws into the bottom of the unit.
2. Place the metal plates so that the screw heads insert into the slots as shown.
3. Slide the metal plates in the direction of the arrows, and drive the screws.
4. Place the template on the wall to mark two screw positions, and install the big screws into the wall.
5. Hook the battery adaptor onto the screw heads.
Mounting on Concrete or Mortar Walls:
At step 4, drill two holes and drive the anchor plugs with a hammer, flush to the wall, and install the big screws into the anchor plugs.

Note
• If the Power LED does not go on, check the main unit, battery adaptor, batteries and wiring connection.
• After connection of the battery adaptor, keep the power switch on unless when the main unit is turned off. (Batteries will discharge.)
• To charge the discharged batteries, use a proper charging unit.
• Power Fuse: (8 A, 32 V) × 2
  If the Power LED light goes off during a power failure, the power fuse may have been blown. To change the fuse:
  1. Turn the power switch off.
  2. Turn the fuse holder in the direction of Arrow B while pushing it in the direction of Arrow A.
  3. Change the fuse.
  4. Turn the fuse holder in the direction of Arrow C while pushing it in the direction of Arrow A.
  5. Turn the power switch on.

Note
• Back-up Duration: depends on the ampere-hour rating of the batteries used.
  E.g., When using two 12 VDC batteries 20 ampere-hour, maintenance-free, gel cell batteries, the power is maintained for about three hours.
2.5 Auxiliary Connection for Power Failure Transfer

2.5.1 Auxiliary Connection for Power Failure Transfer

Power Failure Transfer connects specific standard telephones to selected outside lines in the event of system power failure, as follows:

**KX-TD816**
- Outside Line 1 — Extension (T, R) Jack 1 /
- Outside Line 2 — Extension (T, R) Jack 2 /
- Outside Line 5 — Extension (T, R) Jack 9 /
- Outside Line 6 — Extension (T, R) Jack 10

Connections of outside lines 1, 2 and the respective extensions require no auxiliary connection. Outside lines 5 and 6 require auxiliary connection to implement this feature.

**KX-TD1232**
- Outside Line 1 — Extension (T, R) Jack 1 /
- Outside Line 2 — Extension (T, R) Jack 2 /
- Outside Line 3 — Extension (T, R) Jack 9 /
- Outside Line 4 — Extension (T, R) Jack 10 /
- Outside Line 9 — Extension (T, R) Jack 17 /
- Outside Line 10 — Extension (T, R) Jack 18

Connections of outside lines 1 through 4 and the respective extensions require no auxiliary connection. Outside lines 9 and 10 require auxiliary connection to implement this feature. Insert the modular plugs of connection cords (4-conductor wiring) to the modular jacks of 4-CO Line Unit and 8-Station Line Unit 1.

(In the case of KX-TD816, one 8-Station Line Unit is available.)
Note

- In the event of a power failure, system memory is protected by a factory-provided lithium battery. There is no memory loss except the memories of Camp-on, Saved Number Redial, Last Number Redial, Call Park and Message Waiting.
- The system changes the current connection to this connection automatically when the power supply stops.
- If DC power is available from backup batteries if AC power fails, the system does not change the current connection to the above connection.
- The KX-TD1232 is illustrated as the main unit, and the KX-TD170 and KX-TD180 are illustrated as the expansion units.

Features Guide Reference

Power Failure Transfer
2.6 Closing the Front Cover

2.6.1 Closing the Front Cover

1. Fasten all the cables and cords with the cord fastener.

2. Replace the cover and tighten the screw.

Note
Be sure to tighten two screws, or the unit may not work properly.
3. Tie together all of the connected cords and attach them to the wall so that the cords cannot be pulled out of the main unit.
2.7 Starting the System for the First Time

2.7.1 Starting the System for the First Time

1. Set the Power Switch to the "OFF" position.
2. Set the System Clear Switch to the "CLEAR" position.
3. Plug the AC power cord into the system and an AC outlet.
4. Turn the Power Switch on.
5. Press the Reset Button with a pointed tool.
   (The power indicator will flash.)
6. Slide the System Clear Switch to the "NORMAL" position while the power indicator is flashing (within approximately 10 seconds).

The system will be initialized with default values. The system will also check the outside lines, extensions, and optional cards and units.

KX-TD816
KX-TD1232

Notice
• After pressing the Reset Button, slide the System Clear Switch to the "NORMAL" position at step 6 while the power indicator is flashing (within approximately 10 seconds). Otherwise, the system will not start up with the default values.

CAUTION
The power socket wall outlet should be located near this equipment and be easily accessible.

Once you start up the system and you turn the power off, do not perform the above procedure to start the system again. Otherwise, your programed data will be cleared. To start the system, just turn the Power Switch on.

The power outlet should be located near this equipment and easily accessible.
2.8 System Restart

2.8.1 System Restart

After starting the system, if the system does not operate properly, restart the system. Before restarting the system, try the system feature again to confirm whether there definitely is a problem or not.

System Restart causes the following:

a) Camp-on is cleared.
b) Calls on Hold are terminated.
c) Calls on Exclusive Hold are terminated.
d) Calls in progress are terminated.
e) Call Park is cleared.

Other data is not cleared by System Restart.

1. Make sure that the System Clear Switch is set to the "NORMAL" position.
2. Press the Reset Button with a pointed tool.

Notice

After pressing the Reset Button, if you notice that the System Clear Switch is set to the "CLEAR" position, never slide the System Clear Switch to the "NORMAL" position within 20 seconds. Otherwise, all the system programming data are reset to default values (Refer to 2.9.1 System Data Clear). Wait at least 30 seconds, then slide to the "NORMAL" position. Then the system will work as before.

If the system still does not operate properly, please see 5.1.4 Using the Reset Button.
2.9 System Data Clear

2.9.1 System Data Clear

After storing or changing the system programming data, it is possible to clear your programming data stored in the system, if required. The system will restart with the default setting.

1. Slide the System Clear Switch to the "CLEAR" position.
2. Press the Reset Button with a pointed tool.
3. Return the System Clear Switch to the "NORMAL" position while the power indicator is flashing (within approximately 10 seconds).

Notice

After pressing the Reset Button, return the System Clear Switch to the "NORMAL" position in step 3 while the power indicator is flashing (within approximately 10 seconds). Otherwise, the system will not clear.
Section 3

ISDN Installation
3.1 ISDN Network Outline

3.1.1 Overview

To use the ISDN Line Service, the following unit can be installed to the KX-TD816 and KX-TD1232.

- 2-ISDN U-point Line Unit (KX-TD382)
- 4-ISDN U-point Line Unit (KX-TD384)
- 6-ISDN U-point Line Unit (KX-TD386)
- 4-ISDN S / T-point Line Unit (KX-TD284)

These units add ISDN U-point or S / T-point lines. These units can be installed in any of the expansion areas provided on the front of the main unit.

Notice

- System Programming is required for card location identification. It is not possible to connect this unit only to the slave system.
- The PLL (Phase Locked Loops) Card (KX-TD112) must be installed to the system before the ISDN Line Unit is installed. This card is used to synchronize the system clock with the clock of the ISDN network.
- In the System Connection of the KX-TD1232, the PLL Card can be installed to the only master system.

Programming Guide References

[109] Expansion Unit Type

Features Guide References

Module Expansion
3.2 ISDN Line Connection

3.2.1 Location of the Units

KX-TD816

One ISDN Line Unit (KX-TD382, KX-TD384, KX-TD386 or KX-TD284) can be installed to any expansion area.

Note

- System Programming is required for expansion unit location. 
  \(<SYS \text{ PRG} \{109\}\> 
  \textbf{Default} : \text{Area } 1 = \text{4-CO Line Unit} \text{ Area } 2 \text{ and } 3 = \text{8-Station Line Unit} 
- When starting the system for the first time or performing System Data Clear, the location application will use the actual installation settings instead of the system default settings.
- Either one KX-TD382, one KX-TD384 , one KX-TD386 or one KX-TD284 can be installed in a system.
- For unit combinations, refer to 1.4.2 Expansion Unit Combination.
KX-TD1232

One ISDN Line Unit (KX-TD382, KX-TD384, KX-TD386 or KX-TD284) can be installed to any expansion area.

One of the following ISDN line unit

- 2-ISDN S0 Line Unit, KX-TD382:
- 4-ISDN S0 Line Unit, KX-TD384:
- 6-ISDN S0 Line Unit, KX-TD386:
- 4-ISDN S0 Line Unit, KX-TD284:

Note

- System Programming is required for expansion unit location.
  <SYS PRG [109]>
- Default: Area 1 = 4-CO Line Unit
  Area 2 and 3 = 8-Station Line Unit
- For unit combinations, refer to 1.4.2 Expansion Unit Combination.
3.2.2 Installation the Unit

Step 6 is different for each unit.
The KX-TD1232 is illustrated as the main unit.

Attention
To install an ISDN Line Unit, install the PLL (Phase Locked Loops) Card (KX-TD112) first.
1. Power off the system, and unplug the AC cord.
2. Loosen the screws to open the front cover and the inside cover of the main unit.
   Note
   If any card, unit, or cords are installed to the main unit, remove them beforehand.
3. Insert the PLL Card to the connectors on the CPU Board.
   Note
   Make sure the card connectors are attached securely to the board, or the system may not operate properly.

4. Place the inside cover back on the main unit and secure the screws, and then close the front cover and secure the screws.
5. Follow the steps on the next page.
1. Loosen two screws on the cover plate. Insert fingers into the slits to remove the cover plate.

Note
Any of the cover plates can be removed, as needed.

2. Connect the cabinet cord to the connector in the main unit firmly.

3. Hook the cabinet to the main unit and slide the cabinet to the left until it is secured.
4. Loosen the outside screw and slide the cover to the right.

5. Secure the inside screw (included) to fix the cabinet to the main unit.

**Note**
Be sure to fix the inside screw to the main unit, or the unit may not work properly.
6. Insert the 8-pin modular plug into a jack on the unit.

If a KX-TD382, KX-TD384 or KX-TD386 is to be installed:

If a KX-TD284 is to be installed:

a) Prepare the required plugs. (RJ45: plugs are not included in KX-TD284.)

Wiring for external ISDN S0 line

```
Pins No. 1 2 3 4 5 6
3 4 RA TA TB RB
\rightarrow From Network
```

* Pin 1, 2, 7 and 8 are not connected.

Wiring for internal ISDN S0 line

```
Pins No. 1 2 3 4 5 6
3 4 RA TA TB RB
\rightarrow From Terminal Equipment
```

* Pin 1, 2, 7 and 8 are not connected.
b) Insert the plug into a jack on the unit.
Connect a grounding wire to the ground terminal on the KX-TD284.

7. Tie all of the cords into a bundle. If other cords are exposed in the upper cabinets, tie them also.
8. Close the cabinet cover and secure the outside screw.
9. Cover the cords with the cord holder (included).
10. Fix the cords to the wall as shown so that the front cover can be opened.

**Note**

If two or three expansion units are installed, cut the cabinet covers on the lower cabinets to allow the cords from the upper cabinet to go down through the cabinet covers. To protect the cords, smooth the cut edges.

**Programming Guide References**

[109] Expansion Unit Type
4.1 T1 Line Outline

4.1.1 Overview

To use the T1 Line, the following unit is required.

**T1 Line Unit (KX-TD187)**
The unit adds 24 channels (outside line number 25 through 48 for KX-TD1232). If this unit is installed, other optional cards which extend outside lines cannot. This unit can be installed to any of the expansion unit areas provided on the front of the main unit.

**Note**
- KX-TD187 must be installed behind an FCC registered and UL or CSA-NRTL listed CSU.
- If you use the KX-TD170 with the KX-TD187, you must use the KX-TD170 which has suffix 'C' or later.
  The former KX-TD170 does not work properly with KX-TD187.
  Please see the back of the unit and check suffix.

**How to distinguish suffix**

![Diagram showing suffix and UNIT No.]

**The compatibility between KX-TD187 and KX-TD170**

<table>
<thead>
<tr>
<th></th>
<th>Master System</th>
<th>Slave System</th>

Programming Guide References
[109] Expansion Unit Type

Features Guide References
Module Expansion
4.2 T1 Line Installation

4.2.1 Location of the Unit

**KX-TD1232**

One T1 Line Unit (KX-TD187) can be installed to any expansion area on the master system of KX-TD1232.

**Note**

- System Programming is required for expansion unit location.  
  `<SYS PRG [109]>`
  **Default**: Area 1 = 4-CO Line Unit  
  Area 2 and 3 = 8-Station Line Unit
- As Section 1.4.2 Expansion Unit Combination.
4.2.2 Installing the Unit

Installing one unit to the system allows 24 channels to be connect to outside lines (outside line number 25 through 48) for the master system of KX-TD1232.

1. Loosen two screws on the cover plate. Insert fingers into the slits to remove the cover plate.

Note
Any of the cover plates can be removed, as needed.

2. Connect the cabinet cord to the connector in the main unit firmly.
3. Hook the cabinet to the main unit and slide the cabinet to the left until it is secured.

4. Loosen the outside screw and slide the cover to the right.

5. Secure the inside screw (included) to fix the cabinet to the main unit.

**Note**
Be sure to fix the inside screw to the main unit, or the unit may not work properly.
6. Insert the 8-pin modular plug into a jack on the unit.

![Diagram of T1 Line Installation showing CSU (Channel Service Unit)]

7. Tie all of the cords into a bundle. If other cords are exposed in the upper cabinets, tie them also.

8. Close the cabinet cover and secure the outside screw.

9. Cover the cords with the cord holder (included).
10. Fix the cords to the wall as shown so that the front cover can be opened.

**Note**

If two or three expansion units are installed, cut the cabinet covers on the lower cabinets to allow the cords from the upper cabinet to go down through the cabinet covers. To protect the cords, smooth the cut edges.

Section 5

Troubleshooting

This section provides information for system and telephone troubleshooting.
## 5.1 Troubleshooting

### 5.1.1 Installation

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>PROBABLE CAUSE</th>
<th>POSSIBLE SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Bad connection between the system and extension.</td>
<td>Take the extension and plug it into the same extension port using a short telephone cord. If the telephone does not work, the connection between the system and the extension must be repaired.</td>
</tr>
<tr>
<td></td>
<td>A telephone with an A-A1 relay is connected.</td>
<td>Use a 2 wire cord. Set the A-A1 relay switch of the telephone to the &quot;OUT&quot; or &quot;OFF&quot; position.</td>
</tr>
<tr>
<td></td>
<td>Bad extension.</td>
<td>Take the extension and plug it into another extension port that is working. If the telephone does not work, replace the phone.</td>
</tr>
<tr>
<td>Incorrect reset operation.</td>
<td></td>
<td>Press the Reset Button.</td>
</tr>
<tr>
<td>Noise in external paging.</td>
<td>Induced noise on the wire between the system and the amplifier.</td>
<td>Use a shielded cable as the connection wire between the system and amplifier. A short shielded cable is recommended.</td>
</tr>
<tr>
<td>Volume distortion from external music source.</td>
<td>Excessive input level from external music source.</td>
<td>Decrease the output level of the external music source by using the volume control on the music source.</td>
</tr>
<tr>
<td>Speed Dialing or One-Touch Dialing does not function.</td>
<td>Bad programming.</td>
<td>Enter the outside line access number (9, 81 through 88) into programming.</td>
</tr>
</tbody>
</table>
### 5.1.2 Connection

Connection between the system and a proprietary telephone:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The T / R is connected to the D1 / D2.</td>
<td>Use the correct cord (inner 2 wires are for T / R and the outer 2 wires are for D1 / D2).</td>
</tr>
</tbody>
</table>

- **CAUSE:**
  - D1
  - T
  - R
  - D2

- **SOLUTION:**
  - Use the correct cord (inner 2 wires are for T / R and the outer 2 wires are for D1 / D2).

- **Connection between the system and a proprietary telephone:**
  - **CAUSE:**
    - P1
    - D1
    - T
    - R
    - D2
    - P2
  - **SOLUTION:**
    - Use the correct cord (2 second wires from the outside are for D1 / D2 and the 2 outer wires are for P1 / P2).

Connection between the system and a standard telephone:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The T / R is connected to the D1 / D2.</td>
<td>Use the correct cord (inner 2 wires are for T / R).</td>
</tr>
</tbody>
</table>

- **CAUSE:**
  - D1
  - T
  - R
  - D2

- **SOLUTION:**
  - Use the correct cord (inner 2 wires are for T / R).
  - If a telephone equipped with an A-A1 relay is connected to the system, set the A-A1 relay switch of the telephone to "OFF".

Connection between the system and a standard telephone that is polarity-sensitive:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The &quot;T&quot; is connected to the &quot;R&quot;.</td>
<td>Reverse the connections of the T / R.</td>
</tr>
</tbody>
</table>

- **CAUSE:**
  - D1
  - T
  - R
  - D2

- **SOLUTION:**
  - Reverse the connections of the T / R.

*Available for the KX-TD1232 only.*

---

(Continued on the following.)
Connection between the central office and the system:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Outside lines are connected to the T2 / T1.</td>
<td>Reconnect the outside lines to the T1 / R1 or T2 / R2 of the telephone jack using 2-conductor wiring.</td>
</tr>
<tr>

<tr>
<td>Outside line KX-TD816 / KX-TD1232</td>
<td>Outside line KX-TD816 / KX-TD1232</td>
</tr>
</tbody>
</table>

Can you dial out on an outside line? No (Continued from the previous.)
### 5.1.3 Operation

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>PROBABLE CAUSE</th>
<th>POSSIBLE SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>• When using the speakerphone mode with a proprietary telephone KX-T7130 or KX-T7030, nothing is audible.</td>
<td>• The HANDSET / HEADSET selector of the KX-T7130 or KX-T7030 is set to the &quot;HEADSET&quot; position.</td>
<td>• When the headset is not used, set the HANDSET / HEADSET selector to the &quot;HEADSET&quot; position.</td>
</tr>
<tr>
<td>• When using the speakerphone / monitor mode with a digital proprietary telephone, nothing is audible.</td>
<td>• The &quot;HEADSET&quot; mode is selected by Station Programming, &quot;Handset / Headset Selection&quot;.</td>
<td>• When the headset is not used, select the &quot;HANDSET&quot; mode by Station Programming.</td>
</tr>
<tr>
<td>The unit does not ring.</td>
<td>The Ringer Volume Selector is set to &quot;OFF&quot;.</td>
<td>Set to &quot;HIGH&quot; or &quot;LOW&quot;.</td>
</tr>
<tr>
<td>During a power failure, extensions connected to jack numbers 1, 2, 9, 10 for KX-TD816, and 1, 2, 9, 10, 17, 18 for KX-TD1232 do not operate.</td>
<td>• A digital or analog proprietary telephone (DPT / APT) is connected to the jack.</td>
<td>• Disconnect the DPT or APT and connect a standard telephone.</td>
</tr>
<tr>
<td></td>
<td>• The dialing mode (tone or pulse) is improper.</td>
<td>• Set the Tone / Pulse switch to the other position.</td>
</tr>
<tr>
<td>During system connection operation for KX-TD1232, originating an intercom / outside call from one system to the other system is not possible.</td>
<td>Interface between the systems is disconnected.</td>
<td>Connect the interface between the systems and press the Reset Button on both systems.</td>
</tr>
<tr>
<td>Originating an outside call, Call Transfer, or Conference cannot be performed.</td>
<td>The corresponding CO button does not exist on the proprietary telephone.</td>
<td>Program the CO button. See Section [005] Flexible CO Button Assignment.</td>
</tr>
</tbody>
</table>
5.1.4 Using the Reset Button

If the system does not operate properly, use the Reset Button.
(If Master and Slave Systems are in operation by System Connection for KX-TD1232, reset both systems.)
Before using the Reset Button, try the system feature again to confirm whether there definitely is a problem or not.

1. When the System Clear Switch is set to "NORMAL", pressing the Reset Button causes the following:
   a) Camp-on is cleared.
   b) Calls on Hold are terminated.
   c) Calls on Exclusive Hold are terminated.
   d) Calls in progress are terminated.
   e) Call Park is cleared.
   All other data stored in memory is not cleared.

2. When the System Clear Switch is set to the "CLEAR" position, you must press the Reset Button with caution. All data stored in memory will be cleared by the following operation: pressing the Reset Button and setting the System Clear Switch to the "NORMAL" position while the Power Indicator is flashing.

Operation

1. If the system does not operate properly,
   a) Make sure that the System Clear Switch is set to the "NORMAL" position.
   b) Press the Reset Button with a pointed tool.

2. If the system still does not operate properly,
   a) Set the System Clear Switch to the "CLEAR" position.
   b) Press the Reset Button with a pointed tool.
   c) Return the System Clear Switch to the "NORMAL" position while the Power Indicator is flashing (approximately within 10 seconds).

3. If the system still does not work, switch the power off and on again after five minutes.

4. If the system still does not work,
   a) Switch the power off.
   b) Set the System Clear Switch to the "CLEAR" position.
   c) Switch the power on.
   d) Press the Reset Button with a pointed tool.
   e) Set the System Clear Switch to the "NORMAL" position while the Power Indicator is flashing (approximately within 10 seconds).
5. If the system still does not work, switch the power off. If gel cell batteries are connected to the system, disconnect them, too. Then consult an authorized service person.

When the power supply stops, certain extensions are automatically connected straight to specific outside lines:

**KX-TD816**
- Extension (T, R) of jack number 1: Outside line 1
- Extension (T, R) of jack number 2: Outside line 2
- Extension (T, R) of jack number 9: Outside line 5
- Extension (T, R) of jack number 10: Outside line 6

**KX-TD1232**
- Extension (T, R) of jack number 1: Outside line 1
- Extension (T, R) of jack number 2: Outside line 2
- Extension (T, R) of jack number 9: Outside line 3
- Extension (T, R) of jack number 10: Outside line 4
- Extension (T, R) of jack number 17: Outside line 9
- Extension (T, R) of jack number 18: Outside line 10

Connect standard telephones to the above extension jacks.
