The models marked *¹ can be installed in KX-TD1232 only. The model marked *² can be installed in KX-TD816 only.
Attention

- Keep the unit away from heating appliances and electrical noise generating devices such as fluorescent lamps, motors and television. These noise sources can interfere with the performance of the Digital Super Hybrid System.

- This unit should be kept free of dust, moisture, high temperature (more than 40°C / 104°F) and vibration, and should not be exposed to direct sunlight.

- Never attempt to insert wires, pins, etc. into the vents or other holes of this unit.

- If there is any trouble, disconnect the unit from the telephone line. Plug the telephone directly into the telephone line. If the telephone operates properly, do not reconnect the unit to the line until the trouble has been repaired by an authorized Panasonic Factory Service Center. If the telephone does not operate properly, chances are that the trouble is in the telephone system, and not in the unit.

- Do not use benzine, thinner, or the like, or any abrasive powder to clean the cabinet. Wipe it with a soft cloth.

**WARNING:** TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE.

The serial number of this product may be found on the label affixed to the bottom of the unit. You should note the serial number of this unit in the space provided and retain this book as a permanent record of your purchase to aid in identification in the event of theft.

MODEL NO.: 

SERIAL NO.: 

Additional Information

If you connect the Panasonic Wireless System (model KX-T336900) to the Digital Super Hybrid System (model KX-TD816, KX-TD1232), the following features do not work with the Wireless System:

- Call Forwarding — Follow Me
- Limited Call Duration
Attention

When you ship the product
Carefully pack and send it prepaid, adequately insured and preferably in the original carton. Attach a postage-paid letter, detailing the symptom, to the outside of the carton. DO NOT send the product to the Executive or Regional Sales offices. They are NOT equipped to make repairs.

Product service
Panasonic Servicenters for this product are listed in the servicenter directory. Consult your authorized Panasonic dealer for detailed instructions.

Important Safety Instructions

When using your telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

1. Read and understand all instructions.
2. Follow all warnings and instructions marked on the product.
3. Unplug this product from the wall outlets before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
4. Do not use this product near water, for example, near a bath tub, wash bowl, kitchen sink, or laundry tub, in a wet basement, or near a swimming pool.
5. Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious damage to the product.
6. Slots and openings in the cabinet and the back or bottom are provided for ventilation, to protect it from overheating, these openings must not be blocked or covered. The openings should never be blocked by placing the product on the bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register. This product should not be placed in a built-in installation unless proper ventilation is provided.
7. This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your dealer or local power company.
8. This product is equipped with a three wire grounding type plug, a plug having a third (grounding) pin. This plug will only fit into a grounding type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding type plug.
9. Do not allow anything to rest on the power cord. Do not locate this product where the cord will be abused by people walking on it.
Important Safety Instructions

10. Do not overload wall outlets and extension cords as this can result in the risk of fire or electric shock.

11. Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.

12. To reduce the risk of electric shock, do not disassemble this product, but take it to a qualified serviceman when some service or repair work is required. Opening or removing covers may expose you to dangerous voltages or other risks. Incorrect reassembly can cause electric shock when the appliance is subsequently used.

13. Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
   A. When the power supply cord or plug is damaged or frayed.
   B. If liquid has been spilled into the product.
   C. If the product has been exposed to rain or water.
   D. If the product does not operate normally by following the operating instructions. Adjust only those controls, that are covered by the operating instructions because improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
   E. If the product has been dropped or the cabinet has been damaged.
   F. If the product exhibits a distinct change in performance.

14. Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.

15. Do not use the telephone to report a gas leak in the vicinity of the leak.

SAVE THESE INSTRUCTIONS
1. Notification to the Telephone Company

Customers, before connecting terminal equipment to the telephone network, shall upon request of the Telephone Company, inform the Telephone Company of the particular line(s) to which such connection is made, the F.C.C. registration number (see the label on the bottom of the unit) and ringer equivalence number (REN) of the registered terminal equipment.

The REN is useful in determining the quantity of devices you may connect to your telephone line and still have all of those devices ring when your telephone number is called. In most, but not all areas, the sum of the REN’s of all devices connected to one line should not exceed five (5.0). To be certain of the number of devices you may connect to your line, as determined by the REN, you should contact your local telephone company to determine the maximum REN for your calling area.

2. Connection to Telephone Line

This unit must not be connected to a coin operated line. If you are on a party line, check with your local telephone company.

3. Incidence of Harm to the Telephone Lines

Should terminal equipment cause harm to the telephone network, the telephone company shall, where practical, notify the customer that temporary discontinuance of service may be required.

However, where prior notice is not practical, the telephone company may temporarily discontinue service forthwith, if such action is reasonable in the circumstances. In case of such unNOTIFIED temporary discontinuance of service, the telephone company shall:

(a) Promptly notify the customer of such temporary discontinuance of service.
(b) Afford the customer the opportunity to correct the situation which gave rise to the temporary discontinuance.
(c) Inform the customer of the right to bring a complaint to the Federal Communication Commission pursuant to the procedures set out in Subpart E of Part 68 of FCC Telephone Equipment Rules.

4. Compatibility of the Telephone Network and Terminal Equipment

(a) Availability of telephone interface information.

Technical information concerning interface parameters and specifications not specified in FCC Rules, including the number of Ringers which may be connected to a particular telephone line, which is needed to permit Terminal Equipment to operate in a manner compatible with Telephone Company communications facilities, shall be provided by the Telephone Company upon customer's request.
Telephone Company and F.C.C. Requirements and Responsibilities

The Telephone Company may make changes in its communications facilities, equipment, operations or procedures, where such action is reasonably required in the operation of its business and is not inconsistent with the rules and regulations in FCC Part 68.

If such changes can be reasonably expected to render any customer Terminal Equipment incompatible with Telephone Company Communications Facilities, or require modification or alteration of such Terminal Equipment, or otherwise materially affect its use or performance, the customer shall be given adequate notice in writing, to allow the customer an opportunity to maintain uninterrupted service.

Notify the Telephone Company

Installation must be performed by a qualified professional installer.

Before connecting this equipment to any telephone, call the telephone company and inform them of the following:

- Telephone numbers to which the system will be connected
- Make: Panasonic
- Model: KX-TD816/KX-TD1232
- FCC Registration No.: found on the bottom of the unit
- Ringer Equivalence No.: 0.4B
- Facility Interface Code: 02LS2
- Service Order Code: 9.0F
- Required Network Interface Jack: RJ 14 C

Note:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
Caution:  
Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this device.  
When programming emergency numbers and/or making test calls to emergency numbers:
1. Remain on the line and briefly explain to the dispatcher the reason for the call before hanging up.
2. Perform such activities in the off-peak hours, such as early morning hours or late evenings.
Introduction

This Installation Manual provides technical information for the Panasonic Digital Super Hybrid System, KX-TD816/KX-TD1232. It is designed to serve as an overall technical reference for the system and includes a description of the system, its hardware and software, features and services and environmental requirements.

This manual contains the following sections:

Section 1, System Outline.
Provides general information on the system including system capacity and specifications.

Section 2, Installation.
Contains the basic system installation and wiring instructions, as well as how to install the optional cards and units.

Section 3, Features.
Describes all the basic, optional and programmable features in alphabetical order. It also provides information about the programming required, conditions, connection references, related features and operation for every feature.

Section 4, System Programming.
Provides step-by-step programming instructions for a proprietary telephone.

Section 5, List.
Lists tone/ring tone and default values of system programming.

Section 6, Troubleshooting.
Provides information for system and telephone troubleshooting.

NOTE
The following documents may be used in conjunction with this manual:

- Programming Table
The programming table is designed to be used as a hard copy reference to the user-programmed data.

<td>16</td>
<td>32</td>
<td>64</td>
</tr>
</tbody>
</table>

Module Expansion

Expansion modules are used to increase the system capacity. One CO line module can be added to the basic system to add four CO lines. For KX-TD816, one extension module can be added to the basic system to add 8 extensions, and for KX-TD1232, two extension modules to add 16 extensions.

EXtra Device Port (XDP)

Each extension jack in the system supports the connection of a digital proprietary telephone and a single line device. The devices have different extension numbers and are treated as two completely different extensions.

Paralleled Telephone Connection

Every jack in the system also supports the parallel connection of a proprietary telephone and a single line device. They share the same extension number and are considered by the system to be one extension.

Super Hybrid System

This system supports the connection of digital and analog proprietary telephones, DSS Consoles and single line devices such as single line telephones, facsimiles, and data terminals.

System Connection*

With the addition of optional System Inter Connection Card, two Digital Super Hybrid Systems can be connected together to expand the system to a maximum of 24 CO lines and 64 extensions. The two systems function as one, however, some functions such as paging and music on hold are duplicated.

*: Available for KX-TD1232 only.
1.1 System Highlights

Digital Proprietary Telephones (DPT)
The system supports four different models of digital proprietary
telephones which cover the range from a monitor set to a large
display handsfree version.

Programming System
The system can be programmed from a proprietary telephone or
from a personal computer.

Voice Mail Integration
The system supports Voice Processing Systems with in-band
DTMF signaling. The Panasonic Voice Processing System
provides automated attendant, voice mail, interview and bulletin
board services.

Automatic Route Selection (ARS)
Automatically selects the pre-programmed least expensive route for
outgoing toll calls.

Caller ID
Allows the user to see the name or telephone number of a caller on
the telephone display before answering the call.

Trunk (CO Line) Answer From Any Station (TAFAS)
Ringing occurs over the external paging system; call can be
answered from any station.

Remote Station Lock Control
Allows an operator to lock an extension so that outgoing calls
cannot be made.
The KX-TD816 Digital Super Hybrid System has a basic capacity of four CO lines and eight extensions, and KX-TD1232 has eight CO lines and 16 extensions. It is capable of supporting Panasonic digital and analog proprietary telephones, DSS Consoles and single line devices such as single line telephones, facsimiles.

To expand its capabilities the system can be equipped with optional components or customer-supplied peripherals such as external speakers and external music sources (e.g., radios).
### 1.3 Proprietary Telephones

The following Panasonic proprietary telephones are available with this system.

<table>
<thead>

**Note:**
- **CO**: CO line access button
- **PF**: Programmable Feature button
1.4 Options

1.4.1 8-Station Line Unit (KX-TD170)

Each unit adds eight extensions. One expansion unit for KX-TD816, and up to two expansion units for KX-TD1232 can be installed per system.

1.4.2 4-CO Line Unit (KX-TD180)

Adds four CO lines. One expansion unit can be added for a maximum of 8 CO lines for KX-TD816, and 12 CO lines per system for KX-TD1232.

1.4.3 System Inter Connection Card (KX-TD192)*

Permits two Digital Super Hybrid Systems to be connected together — to double system capacity.

*: Available for KX-TD1232 only.
1.4 Options

1.4.4 DISA Card (KX-TD191)*

This card is required to use the Direct Inward System Access (DISA) feature and to record an Outgoing Message. DISA allows you to access the desired destination in the system directly from an external telephone. Once you have accessed the DISA line, just dial the extension number. The Outgoing Messages (OGM) for the external callers can be recorded, if necessary and/or an OGM for Timed Reminder can be recorded.

1.4.5 Caller ID Card (KX-TD193)

Supports the Caller ID service of the central office. Caller ID allows the extension user to see the name or phone number of an external caller on the display before answering the call.

1.4.6 Remote Card (KX-TD196)*

The Remote Card allows programming and maintenance of the system from a remote location.

*: Available for KX-TD1232 only.
1.4 Options

1.4.7 Doorphone Card (KX-TD160)

This card supports two doorphones and two door openers. The doorphone is an option (KX-T30865).

![Diagram of doorphone card and associated components]

Notes The KX-TD1232 is illustrated as a main unit.

1.4.8 Backup Battery and Adaptor Card (KX-A216)*

Operate all the features as a backup power supply in the event of a power failure.

![Diagram of backup battery and adaptor card]

*: Available for KX-TD816 only.
1.4 Options

1.4.9 Battery Adaptor (KX-A46)

Supports the connection of two gel cell batteries (12 VDC×2) for power backup in case of a power failure.

Notes The KX-TD1232 is illustrated as a main unit.

1.4.10 DSS Console (KX-T7240 / KX-T7040)

Permits easy and quick access to stations and features. The Busy Lamp Field shows the idle or busy state of each station. DSS Consoles are designed for use with a proprietary telephone. The system supports up to four DSS Consoles per system.

Notes The KX-TD1232 is illustrated as a main unit.
1.5 Specifications

Section 2
Installation

This section contains the basic system installation and wiring instructions, as well as how to install the optional cards and units.
2.1 Before Installation

Please read the following notes concerning installation and connection before installing the system.

Safety Installation Instructions
When installing telephone wiring, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:
1. Never install telephone wiring during a lightning storm.
2. Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.
3. Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.
4. Use caution when installing or modifying telephone lines.

Installation Precautions
This set is exclusively made for wall mounting only. Avoid installing in the following places. (Doing so may result in malfunction, noise, or discoloration.)
1. In direct sunlight and hot, cold, or humid places. (Temperature range: 0°C – 40°C / 32°F – 104°F)
2. Sulfuric gases produced in areas where there are thermal springs, etc. may damage the equipment or contacts.
3. Places in which shocks or vibrations are frequent or strong.
4. Dusty places, or places where water or oil may come into contact with the unit.
5. Near high-frequency generating devices such as sewing machines or electric welders.
6. On or near computers, telexes, or other office equipment, as well as microwave ovens or air conditioners. (It is preferable not to install in the same room with the above equipment.)
7. Install at least 1.8 m (6 feet) from radios and televisions. (both the main unit and proprietary telephones)
8. Do not obstruct area around the main unit (for reasons of maintenance and inspection — be especially careful to allow space for cooling above and at the sides of the main unit).

Wiring Precautions
Make sure to keep the following instructions when wiring.
1. Do not wire the telephone cable in parallel with an AC power source, computer, telex, etc. If the cables are run near those wires, shield the cables with metal tubing or use shielded cables and ground the shields.
2. If cables are run on the floor, use protectors or the like to protect
2.1 Before Installation

the wires where they may be stepped on. Avoid wiring under carpets.

3. Avoid using the same power supply outlet for computers, telexes, and other office equipment. Otherwise, the KX-TD816's and KX-TD1232's system operation may be interrupted by the induction noise from such equipment.

4. Please use one pair telephone wire for extension connection of (telephone) equipment such as standard telephones, data terminals, answering machines, computers, voice processing systems, etc., except proprietary telephones (KX-T7220, KX-T7230, KX-T7235, KX-T7250 etc.).

5. The Power Switch of the system must be off during wiring. After all the wirings are completed, turn the Power Switch on.

6. Mis-wiring may cause the system to operate improperly. Refer to Section 6.1.1 “Installation” and Section 6.1.2 “Connection.”

7. If an extension does not operate properly, disconnect the telephone from the extension line and then connect again, or turn off the Power Switch of the system and then on again.

8. The KX-TD816/KX-TD1232 is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the purpose of the grounding-type plug.

9. Use twisted pair cable for CO line connection.

10. CO lines should be installed with lightning protectors. For details, refer to Section 2.3.10 “Installation of Lightning Protectors.”

**Warning:**
Static sensitive devices are used. To protect printed circuit boards from static electricity, do not touch connectors indicated to the right. To discharge body static, touch ground or wear a grounding strap.
2.2 Installation of the Main Unit

2.2.1 Unpacking

Unpack the box and check the items below:

2.2.2 Name and Location

Overview of the Main Unit

![Diagram of Main Unit](image)
2.2 Installation of the Main Unit

Inside View of the Main Unit
KX-TD816 (Modular Connector Type)

KX-TD1232 (Modular/Amphenol Connector Type)
2.2.3 Wall Mounting

This set is exclusively made for wall mounting only. The wall where the main unit is to be mounted must be able to support the weight of the main unit. If screws other than the ones supplied are used, use the same-sized diameter screws as the enclosed ones.

KX-TD816

Mounting on Wooden Wall

1. Place the templet (included) on the wall to mark the three screw positions.

2. Install the three screws (included) into the wall.

3. Hook the main unit on the screw heads.

Mounting on Concrete or Mortar Wall

1. Place the templet (included) on the wall to mark the three screw positions.

2. Drill three holes and drive the anchor plugs (included) with a hammer, flush to the wall.

3. Install the three screws (included) into the anchor plugs.

4. Hook the main unit on the screw heads.
2.2.3 Wall Mounting

KX-TD1232

Mounting on Wooden Wall

1. Place the templet (included) on the wall to mark the four screw positions.

2. Install the four screws (included) into the wall.

3. Hook the main unit on the screw heads.

Mounting on Concrete or Mortar Wall

1. Place the templet (included) on the wall to mark the four screw positions.

2. Drill four holes and drive the anchor plugs (included) with a hammer, flush to the wall.

3. Install the four screws (included) into the anchor plugs.

4. Hook the main unit on the screw heads.
2.2 Installation of the Main Unit

2.2.4 Frame Ground Connection

IMPORTANT!!!
Connect the frame of the main unit to ground.

In most continental United States, the ground provided by the “Third wire ground” at the commercial power outlet will be satisfactory. However, in a small percentage this ground may be installed incorrectly. Therefore, the following test procedure should be performed.

Test Procedure
1. Obtain a suitable voltmeter and set it for a possible reading of up to 250 VAC.
2. Connect the meter probes between the two main AC voltage points on the wall outlet. The reading obtained should be 108-132 VAC.
3. Move one of the meter probes to the 3rd prong terminal (GND).
   Either the same reading or a reading of 0 volt should be obtained.
4. If a reading of 0 volt at one terminal and a reading of 108-132 VAC at the other terminal is not obtained, the outlet is not properly grounded.
   This condition should be corrected by a qualified electrician (per article 250 of the National Electrical Code).
5. If a reading of 0 volt at one terminal and a reading of 108-132 VAC at the other terminal is obtained, then set the meter to the "OHMS/RX1" scale, place one probe at the GND Terminal and the other probe at the terminal which gave a reading of 0 volt.
   A reading of less than 1 ohm should be obtained.
   If the reading is not obtained the outlet is not adequately grounded, see qualified electrician.
2.2 Installation of the Main Unit

2.2.5 Opening Front Cover

1. Loosen two screws on the right side of the main unit.
2. Open the front cover in the direction of arrow ③.

Note: Two screws are attached to the front cover with springs so that they will not be lost.
2.3 Connection

KX-TD1232

12 CO Lines
- to CO's 1 through 8 (initial)
- to CO's 9 through 12 (additional)

32 Extensions (16 extensions - initial, 16 extensions - additional)

- Single Line Telephone
- Data Terminal
- Cordless Phone
- Telephone Answering Machine with Facsimile
- Voice Processing System

It is recommended that extension of jack 1 is a display proprietary telephone.

Parallel connection of telephones is possible. Refer to Section 2.3.4 "Paralleled Telephone Connection."

needs Optional Cards or Adaptor.
2.3.2 CO Line Connection

(KX-TD816: CO1 through CO4, KX-TD1232: CO1 through CO8)

Using Modular Connector (for KX-TD816, KX-TD1232)

Connection

Insert the modular plugs of the telephone line cords (4-conductor wiring) into the modular jacks on the system.

**KX-TD816**

![Diagram of KX-TD816](image)

Use twisted pair cable for installation.

- It is recommended to use the telephone CO jacks of RJ14C.
- Mis-connection may cause the system to operate improperly. See Section 6.1.1 “Installation” and 6.1.2 “Connection” before connection.

---

2-14 Installation
2.3.3 Extension Connection
for Proprietary Telephones, Single Line Telephones and DSS Consoles
(KX-TD816: Jack 1 through Jack 8, KX-TD1232: Jack 1 through Jack 16)

There are two methods to perform Extension Connection, using a modular connector and an Amphenol Connector. Which method should be used depends on the model number of the system as shown below.

<table>
<thead>
<tr>
<th>Model number</th>
<th>Connector to be used</th>
</tr>
</thead>
<tbody>
<tr>
<td>KX-TD816</td>
<td>Modular Connector</td>
</tr>
<tr>
<td>KX-TD1232</td>
<td>Amphenol Connector</td>
</tr>
</tbody>
</table>

Maximum cabling distance of the extension line cord (twisted cable)
The maximum length of the extension line cord (twisted cable) that connects the main unit and the extension is shown below:

26 AWG: Under 140 m (460 feet)
24 AWG: Under 229 m (750 feet)
22 AWG: Under 360 m (1180 feet)

Notes The KX-TD1232 is illustrated as a main unit.
2.3.3 Extension Connection (Jack 01 through Jack 16)
for Proprietary Telephones, Single Line Telephones and DSS Consoles
(KX-TD816: Jack 1 through Jack 8, KX-TD1232: Jack 1 through Jack 16)

1. Using Modular Connector (for KX-TD816)

Connection

Insert the modular plugs of the telephone line cords (4-conductor wiring) into the modular jacks on the system.

![Diagram showing the connection jacks]

Notes: Mis-connection may cause the system to operate improperly. See Section 6.1.1 “Installation” and 6.1.2 “Connection” before connection.
2.3.3 **Extension Connection** (Jack 01 through Jack 16) for Proprietary Telephones, Single Line Telephones and DSS Consoles (KX-TD816: Jack 1 through Jack 8, KX-TD1232: Jack 1 through Jack 16)

2. Using Amphenol Connector (for KX-TD1232)

**Connection**

To connect jacks 1 through 16, insert the connectors to the system as shown.
For Cable Pin Numbers to Be Connected, see page 2-18.

![Diagram showing extension connection with Amphenol Connector]

- **Connector type**
  - 50-pin (Amphenol 57 JE series or the equivalent)

- **Connections**
  - To extensions (Jacks 9 – 16)
  - To extensions (Jacks 1 – 8)

After inserting the connector, fasten the connector with the nylon tie.
### Extension Connection

for Proprietary Telephones, Single Line Telephones and DSS Consoles

(KX-TD816: Jack 1 through Jack 8, KX-TD1232: Jack 1 through Jack 16)

</tbody>
</table>

**Notes**

* "8EXTN" in the table indicates an extension expansion area for KX-TD816. However, pins P1 and P2 are not available, because KX-TD816 cannot perform OHCA by KX-T7130. See Section 3. Features. "Off-Hook Call Announcement (OHCA)".*
2.3.3 Extension Connection
for Proprietary Telephones, Single Line Telephones and DSS Consoles
(KX-TD816: Jack 1 through Jack 8, KX-TD1232: Jack 1 through Jack 16)

There are two expansion areas on the main unit of KX-TD816, one for 8-Station Line Unit and the other for 4-CO Line Unit.

* "8EXTN" in the table indicates an extension expansion area for KX-TD1232. There are three expansion areas on the main unit of KX-TD1232. Up to two 8-Station Line Units and a 4-CO Line Unit can be installed to any area. It is required to designate which is 8-Station Line Unit 1 and which is 2 by system programming.

- If a telephone or answering machine with an A-Al relay is connected to the main unit, set the A-Al relay switch of the telephone or answering machine to OFF position.
- Mis-connection may cause the system to operate improperly. See Section 6.1.1 “Installation” and 6.1.2 “Connection.”

Connection of Proprietary Telephones, Single Line Telephones and DSS Consoles for KX-TD816

Connection of an Analog Proprietary Telephone,
KX-T7020, KX-T7030, KX-T7050, KX-T7055 or KX-T7130
4-conductor wiring is required for each extension.
Connect pins “T”, “R”, “D1” and “D2”.
T: Tip
R: Ring
D1: Data 1
D2: Data 2

Connection of a Digital Proprietary Telephone,
KX-T7220, KX-T7230, KX-T7235, or KX-T7250
4-conductor wiring is required for each extension.
Connect pins “D1” and “D2” only. (“T” and “R” are only needed if Section 2.3.4 “Paralleled Telephone Connection,” Method 2 is used for parallel or XDP connection of a DPT and a single line telephone.)

Connection of a Single Line Telephone
2-conductor wiring is required for each extension.
Connect pins “T” and “R”.

Connection of a DSS Console, KX-T7040 or KX-T7240
4-conductor wiring is required for each extension.
Connect pins “D1” and “D2” only. (“T” and “R” are not necessary.)
2.3.3 Extension Connection
for Proprietary Telephones, Single Line Telephones and DSS Consoles
(KX-TD816: Jack 1 through Jack 8, KX-TD1232: Jack 1 through Jack 16)

Connection of Proprietary Telephones, Single Line Telephones and DSS Consoles for KX-TD1232

Connection of the Proprietary Telephone, KX-T7130
6-conductor wiring is required for each extension.
Connect pins “T”, “R”, “D1”, “D2”, “P1” and “P2”.
  T: Tip        D1: Data 1        P1: 3 Pair Voice (OHCA)
  R: Ring       D2: Data 2        P2: 3 Pair Voice (OHCA)

Connection of a Digital Proprietary Telephone,
KX-T7220, KX-T7230, KX-T7235, or KX-T7250
4-conductor wiring is required for each extension.
Connect pins “D1” and “D2” only. (“T” and “R” are only needed if
Section 2.3.4 “Paralleled Telephone Connection,” Method 2 is used
for parallel or XDP connection of a DPT and a single line
telephone.)

Connection of an Analog Proprietary Telephone,
KX-T7020, KX-T7030, KX-T7050, or KX-T7055
4-conductor wiring is required for each extension.
Connect pins “T”, “R”, “D1” and “D2”.

Connection of a Single Line Telephone
2-conductor wiring is required for each extension.
Connect pins “T” and “R”.

Connection of a DSS Console, KX-T7040 or KX-T7240
4-conductor wiring is required for each extension.
Connect pins “D1” and “D2” only. (“T” and “R” are not
necessary.)

Station Wiring (3-pair twisted cabling):

![Diagram of station wiring](image-url)
2.3.3 Extension Connection
for Proprietary Telephones, Single Line Telephones and DSS Consoles

Notes
- Up to four DSS Consoles (KX-T7040 or KX-T7240) can be installed per system. As the DSS Console itself cannot work alone, it always requires a proprietary telephone used in pair. Place the DSS Console and the paired telephone side by side on your desk.
- It is necessary to designate the jack numbers of paired DSS Consoles and the proprietary telephones by system programming.

Programming References
Section 4, System Programming,
[007] DSS Console Port and Paired Telephone Assignment
[109] Expansion Unit Type

Feature References
Section 3, Features,
DSS Console (KX-T7240 / KX-T7040)
Module Expansion

Note
After completing all the required inside cabling, including CO lines, extensions, external pagers and external music sources, fasten the cables with the nylon tie (included) as shown.
2.3.4 Paralleled Telephone Connection
for a Proprietary Telephone and a Single Line Telephone

Any single line telephone can be connected in parallel with a proprietary telephone as follows:

Method 1: Using a Modular T-Adaptor

![Diagram of Modular T-Adaptor and telephones](image)

Modular T-Adaptor (Panasonic KX-J66 or USOC RJA2X)

4-conductor wiring cord
For DPT: Connect pins “D1” and “D2” only. (“T” and “R” are not necessary.)
For APT: Connect pins “T”, “R”, “D1” and “D2”.

2-conductor wiring cord
Connect pins “T” and “R”.

Digital Proprietary Telephone
(DPT=KX-T7220, KX-T7230, KX-T7235, KX-T7250),
Analog Proprietary Telephone
(APT=KX-T7020, KX-T7030, KX-T7050, KX-T7055, KX-T7130)

Notes
- The KX-TD1232 is illustrated as a main unit.
- The 6-conductor wiring cord (and the Modular T Adaptor KX-J36) is required if the proprietary telephone KX-T7130 is to be used for parallel connection for KX-TD1232.
2.3.4 Paralleled Telephone Connection
for a Proprietary Telephone and a Single Line Telephone

Method 2: for Digital Proprietary Telephone only

Notes
- The KX-TD1232 is illustrated as a main unit.
- Not only a single line telephone but a single line device such as an answering machine, a facsimile or a modem (personal computer) etc. can be connected in parallel with a proprietary telephone.

Feature References
Section 3, Features,
Paralleled Telephone
2.3.5 **EXtra Device Port (XDP) Connection**

for a Digital Proprietary Telephone and a Single Line Telephone

A digital proprietary telephone (KX-T7220, KX-T7230, KX-T7235, or KX-T7250) and a single line telephone can be connected to the same extension jack yet have different extension numbers (eXtra Device Port feature). System Programming is required for this jack.

**Method 1**

4-conductor wiring cord  
Connect pins “D1” and “D2” only. (“T” and “R” are not necessary.)

2-conductor wiring cord  
Connect pins “T” and “R”.

**Notes**  The KX-TD1232 is illustrated as a main unit.

**Method 2**

Section 2.3.4 “Paralleled Telephone Connection, Method 2: for Digital Proprietary Telephone only” is also available for XDP connection.

Section 3, Features,

EXtra Device Port (XDP)
2.3.6 Polarity Sensitive Telephone Connection

If your telephone is polarity sensitive, follow the procedures below:

1. Complete all the required extension wirings.
2. Confirm that dialing can be done from all the extensions using a touch-tone telephone. If you fail to do that, the polarity between the extension and the system must be reversed.
3. Reverse as shown.
4. Set the Power Switch on the main unit to “OFF” position.
5. Connect all CO lines.
6. Confirm that dialing can be done on the following extensions using a tone telephone.
   - KX-TD816
     Extension (T, R) of jack 1 CO 1
     Extension (T, R) of jack 2 CO 2
     Extension (T, R) of jack 9 and 10
     (Extension Expansion Card) CO 5 and CO 6
   - KX-TD1232
     Extension (T, R) of jack 1 CO 1
     Extension (T, R) of jack 2 CO 2
     Extension (T, R) of jack 9 CO 3
     Extension (T, R) of jack 10 CO 4
     Extensions (T, R) of jacks 17 and 18
     (Extension Expansion Card) CO 9 and CO 10
     (Note: Extensions of jacks 9 and 10 for KX-TD816, and 17 and 18 for KX-TD1232 depend on the Power Failure Transfer connection. For details, refer to Section 2.5 “Auxiliary Connection for Power Failure Transfer.”)
     If you fail to do that, the polarity between the system and the CO line must be reversed.
   7. Reverse as shown.
   8. Every time an extension telephone is replaced, repeat the above procedures.

Notes  The KX-TD1232 is illustrated as a main unit.
2.3.7 External Pager (Paging Equipment)
Connection

KX-TD816
One external pager (user-supplied) can be connected to KX-TD816 as illustrated below.

Use an RCA connector and shielded cable.

- Output impedance: 600 Ω
- Maximum length of the cable
  AWG 18 – 22: Under 10 m (33 feet)

KX-TD1232
Up to two external pagers (user-supplied) can be connected to KX-TD1232 per system as illustrated below.

Use an RCA connector and shielded cable.

- Output impedance: 600 Ω
- Maximum length of the cable
  AWG 18 – 22: Under 10 m (33 feet)
2.3.7 External Pager (Paging Equipment) Connection

Notes
- System Connection* permits a maximum of four external pagers. It is programmable which external pager will send background music and whether all the pagers will generate confirmation tone.
- To adjust the sound level of the pagers, use the volume control on the amplifiers.

Programming References
Section 4, System Programming,

Background Music (BGM) – External Paging – External Paging – All
Trunk (CO Line) Answer From Any Station

*: Available for KX-TD1232 only.
2.3.8 External Music Source Connection

KX-TD816

One music source such as a radio (user-supplied) can be connected to KX-TD816 as illustrated below.

Insert the plug to the earphone / headphone jack on the external music source.
Use a two-conductor plug {3.5 mm (9/64 inch) in diameter}.
• Input impedance: 8 Ω

Maximum length of the cable
AWG 18 – 22: Under 10 m (33 feet)

KX-TD1232

Up to two music sources such as a radio (user-supplied) can be connected to KX-TD1232 per system as illustrated below.

Insert the plug to the earphone / headphone jack on the external music source.
Use a two-conductor plug {3.5 mm (9/64 inch) in diameter}.
• Input impedance: 8 Ω

Maximum length of the cable
AWG 18 – 22: Under 10 m (33 feet)
2.3.8 External Music Source Connection

Notes
- System Programming of music sources used for Music on Hold and Background Music is required.
- To adjust the sound level of the Music on Hold, use the volume control on the external music source.

2.3.9 Printer Connection

A user-supplied printer can be connected to the EIA (RS-232C) Connector on the main unit. The printer is used to print out SMDR call records and system programming data.

Connect the EIA (RS-232C) connector of the printer to the EIA Connector.

Notes

The KX-TD1232 is illustrated as a main unit.

Cables must be shielded and the maximum length is 2 m (6.5 feet). Make cables so that the printer will be connected to the system as shown in the chart on the following page.

When using special accessories such as cable, the user should use those specified in this installation manual to comply with the limits for a class A digital device pursuant to the FCC Rules.

The pin configuration of EIA (RS-232C) Connector is as follows:

2.3.9 Printer Connection

EIA (RS-232C) Signals

Frame Ground: FG
Connects to the unit frame and the earth ground conductor of the AC power cord.

Transmitted Data: SD (TXD) (output)
Conveys signals from the unit to the printer. A "Mark" condition is held unless data or BREAK signals are being transmitted.

Received Data: RD (RXD) (input)
Conveys signals from the printer.

Request to Send: RS (RTS) (output)
This lead is held ON whenever CR (DSR) is ON.

Clear To Send: CS (CTS) (input)
An ON condition of circuit CS (CTS) indicates that the printer is ready to receive data from the unit. The unit does not attempt to transfer data or receive data when circuit CS (CTS) is OFF.

Data Set Ready: CR (DSR) (input)
An ON condition of circuit CR (DSR) indicates the printer is ready. Circuit CR (DSR) ON does not indicate that communication has been established with the printer.

Signal Ground: SG
Connects to the DC ground of the unit for all interface signal.

Data Terminal Ready: ER (DTR) (output)
This signal line is turned ON by the unit to indicate that it is ON LINE. Circuit ER (DTR) ON does not indicate that communication has been established with the printer. It is switched OFF when the unit is OFF LINE.

Data Carrier Detect: CD (DCD) (input)
The ON condition is an indication to data terminal (DTE) that the carrier signal is being received.

2.3.10 Installation of Lightning Protectors

Overview

A lightning protector is a device to be installed on a CO line to prevent a dangerous surge from entering the building and damaging equipment.

A dangerous surge can occur if a telephone line comes in contact with a power line. Trouble due to lightning surges has been showing a steady increase with the development of electronic equipment.

In many countries, there are regulations requiring the installation of a lightning protector. A lightning strike to a telephone cable which is 10 m (33 feet) above ground can be as high as 200,000 volts. This system should be installed with lightning protectors. In addition, grounding (connection to earth ground) is very important for the protection of the system.

Recommended lightning protectors

<table>
<thead>

</table>

Installation

![Diagram of lightning protector installation]
2.3.10 Installation of Lightning Protectors

Installation of an Earth Rod

1) Installation location of the earth rod ........ Near the protector
2) Check obstructions ........................................ None
3) Composition of the earth rod ...................... Metal
4) Depth of the earth rod ................................. More than 50 cm
   (20 inches)
5) Size of the grounding wire ......................... Thickness is more than 16 AWG

Notes
- The above figures are recommendations only.
- The length of earth rod and the required depth depend on the composition of the soil.
2.4 Installation of Optional Cards and Units

2.4.1 Location of Optional Cards and Units

The location of the optional cards is shown below.

Precaution To protect the printed circuit boards (P-boards) from static electricity, do not touch parts on the P-boards in the main unit and on the optional cards.

Expansion Units

KX-TD816

One 4-CO Line Unit (KX-TD180) and/or one 8-Station Line Unit (KX-TD170) can be installed to any of the two expansion areas.

Expansion area 2

Expansion area 1

Expansion Unit Connectors

Remove the cover plate(s) on the front cover.

8-Station Line Unit, KX-TD170:
Adds eight extensions.

4-CO Line Unit, KX-TD180:
Adds four CO lines.

Note System Programming is required for expansion unit location. Refer to Section 4.3 [109] "Expansion Unit Type."

Default: Area 1 = 4-CO Line Unit,
Area 2 = 8-Station Line Unit.
2.4.1 Location of Optional Cards and Units

KX-TD1232

One 4-CO Line Unit (KX-TD180) and/or up to two 8-Station Line Units (KX-TD170) can be installed to any of the three expansion areas.

Note: System Programming is required for expansion unit location. Refer to Section 4.3 [109] "Expansion Unit Type."
Default: Area 1 = 4-CO Line Unit,
Area 2 and 3 = 8-Station Line Unit.
2.4.1 Location of Optional Cards and Units

Backup Battery and Adaptor Card, Doorphone Card for KX-TD816

- Install Backup Battery and Adaptor Card, KX-A216. Operates all the features in the event of a power failure.
- Install Doorphone Card, KX-TD160. This card connects two doorphones and two door openers.

Remote Card, System Inter Connection Card, DISA Card, Doorphone Card for KX-TD1232

- Install Remote Card, KX-TD196. This card provides data communications between the system and a remote location.
- Install System Inter Connection Card, KX-TD192. This card connects two systems in parallel.
- Install DISA Card, KX-TD191. This card permits access to the system from outside.
- Install Doorphone Card, KX-TD160. This card connects two doorphones and two door openers.
2.4.1 Location of Optional Cards

Caller ID Cards

Up to two Caller ID Cards (KX-TD193) for KX-TD816, and up to three Caller ID Cards for KX-TD1232 can be installed to the initially provided CO Line Card and 4-CO Line Unit. This card supports Caller ID services offered by the central office. The initially provided CO Line Card is located behind the inside cover.
2.4 Installation of Optional Cards and Units

2.4.2 4-CO Line Unit Connection

To add four CO lines (CO 5 through CO 8 for KX-TD816, and CO 9 through CO 12 for KX-TD1232), use the optional 4-CO Line Unit (KX-TD180). This unit can be installed to any of the expansion unit areas provided on the front of the main unit. For CO Line Expansion Unit Installation, see Section 2.4.4 "Installing Expansion Unit (KX-TD170/KX-TD180).”

Notes
- System Programming is required for card location identification.
- If you intend to attach a Caller ID Card to the 4-CO Line Unit, attach it before CO line connection. See Section 2.4.7 “Caller ID Card Installation.”

Programming References
Section 4, System Programming,
[109] Expansion Unit Type

Feature References
Section 3, Features,
Module Expansion

2.4.3 8-Station Line Unit Connection

To add eight extensions (jack numbers 9 through 16 for KX-TD816, and jack numbers 17 through 24 for KX-TD1232), use the optional 8-Station Line Unit (KX-TD170). To add 16 extensions for KX-TD1232 (jack numbers 17 through 32), use two 8-Station Line Units. This unit can be installed to any of the expansion unit areas provided on the front of the main unit. For Extension Expansion Unit Installation, see Section 2.4.4 "Installing Expansion Unit (KX-TD170/KX-TD180).”

Notes
System Programming is required for card location identification.

Section 3, Features,
Module Expansion
2.4.4 Installing Expansion Unit (KX-TD170 / KX-TD180)

KX-TD816

The following procedures can be used to install either 8-Station Line Unit (KX-TD170) or 4-CO Line Unit (KX-TD180) for KX-TD816.

The following steps 1 through 5 and 7 through 10 are common to both expansion units.

The step 6 shows two different methods to install respective expansion units.

1. Loosen two screws on the cover plate.
   Insert fingers into the slits to remove the cover plate.

2. Connect the cabinet cord to the connector in the main unit firmly.

3. Hook the cabinet on the main unit and slide the cabinet to the left until it is fixed.

4. Loosen the outside screw and slide the cover to the right.

Note: There are two cover plates. Any of them can be removed as needed.
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

5. Connect the frame of the expansion unit to the ground. Secure the inside screw to fix the cabinet to the main unit.

   ![Image of expansion unit connection to ground]

   **Note** If two expansion units are installed, frame ground connection is required for only one unit.

6. **If KX-TD180 is to be installed; (for KX-TD816)**
   Insert the modular plugs of the telephone line cords (4-conductor wiring) into the modular jacks on the unit.

   ![Image of modular plugs being inserted]

   **Jack for Power Failure Transfer †**

   ![Diagram showing connection to terminal board or modular jacks]

   **To Terminal Board or Modular Jacks from the Central Office**

   † For details, refer to Section 2.5 “Auxiliary Connection for Power Failure Transfer.”
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

- If KX-TD170 is to be installed; (for KX-TD816)
  Insert the connector into the jack.

† For details, refer to Section 2.5 “Auxiliary Connection for Power Failure Transfer.”

Notes
- For Cable Pin Numbers to Be Connected, see page 2-18.
- For fixing the connector, see page 2-48.

7. Tie up all the cords into a bundle. If other cords are coming from the upper cabinets, tie them, too.
8. Close the cabinet cover and secure the outside screw.
9. Cover the cords with the cord holder (included).

10. Fix the cords to the wall at the shown position so that the front cover can be opened.
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

Notes
- If two expansion units are installed, cut the cabinet cover(s) on the lower cabinet(s) to let the cords from upper cabinet go down through the cabinet cover(s). To guard the cords, smooth the cut edge.

- If you attach the Caller ID Card, KX-TD193 to the 4-CO Line Unit, KX-TD180, attach it before installing the 4-CO Line Unit to the main unit. For installation, refer to Section 2.4.7 “Caller ID Card Installation.”
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

KX-TD1232

The following procedures can be used to install either 8-Station Line Unit (KX-TD170) or 4-CO Line Unit (KX-TD180) for KX-TD1232. The following steps 1 through 5 and 7 through 10 are common to both expansion cards. The step 6 shows two different methods to install respective expansion units.

1. Loosen two screws on the cover plate. Insert fingers into the slits to remove the cover plate.

3. Hook the cabinet on the main unit and slide the cabinet to the left until it is fixed.

Note There are three cover plates. Any of them can be removed, as needed.

2. Connect the cabinet cord to the connector in the main unit firmly.

4. Loosen the outside screw and slide the cover to the right.
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

5. Connect the frame of the expansion unit to ground. Secure the inside screw firmly to fix the cabinet to the main unit.

Note: If two or three expansion units are installed, frame ground connection is required for only one unit.

6. If KX-TD180 is to be installed; (for KX-TD1232)
Insert the modular plugs of the telephone line cords (4-conductor wiring) into the modular jacks on the unit.

† For details, refer to Section 2.5 “Auxiliary Connection for Power Failure Transfer.”
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

If KX-TD170 is to be installed; (for KX-TD1232)
Insert the connector into the jack.

7. Tie up all the cords into a bundle. If other cords are coming from the upper cabinets, tie them, too.
8. Close the cabinet cover and secure the outside screw.
9. Cover the cords with the cord holder (included).

Jack for Power Failure Transfer †

To extensions
(Jacks 17-24 or 25-32)

Notes
- For Cable Pin Numbers to Be Connected, see page 2-18.
- For fixing the connector, see page 2-48.

† For details, refer to Section 2.5 “Auxiliary Connection for Power Failure Transfer.”

10. Fix the cords to the wall at the shown position so that the front cover can be opened.

Notes
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

Notes
- If two or three expansion units are installed, cut the cabinet cover(s) on the lower cabinet(s) to let the cords from upper cabinet go down through the cabinet cover(s). To guard the cords, smooth the cut edge.

- If you attach the Caller ID Card, KX-TD193 to the 4-CO Line Unit, KX-TD180, attach it before installing the 4-CO Line Unit to the main unit. For installation, Refer to Section 2.4.7 "Caller ID Card Installation."
2.4.4 Installing Expansion Unit
(KX-TD170 / KX-TD180)

Amphenol 57JE Type (screw-attach-type 50-pin connector) Connection
for KX-TD170

To fix the Amphenol 57JE type (screw-attach type 50-pin connector) to the 8-Station Line Unit, follow the procedures below.

1. The 50-pin connector (Jack) on the Expansion Unit has two hook-pins. Remove the upper hook-pin, taking out the screw.

2. To attach the Amphenol 57JE type (Plug) to the connector, drive the accessory screw at the upper part. Fasten the accessory wire tie around the lower hook-pin and the Amphenol 57JE type, as shown.

Note
When connecting a connector of the type shown below, unscrew the lower hook-pin, too. Then drive both accessory screws.

---

2-48 Installation
2.4 Installation of Optional Cards and Units

2.4.5 DISA Card Installation*

1. Insert upper side of the DISA Card into two hooks on the main unit.
2. Press two corners of the lower side of the DISA Card.
3. Connect the cord to the DISA Card Connector.

Programming References
See ‘Programming References’ in Section 3, Features, Direct Inward System Access.

Feature References
Section 3, Features, Direct Inward System Access (DISA)

2.4.6 Remote Card Installation*

1. Insert upper side of the Remote Card into two hooks on the main unit.
2. Press two corners of the lower side of the Remote Card.
3. Connect the cord to the Remote Card Connector.

Programming References

Feature References
Section 3, Features,
System Programming and Diagnosis with Personal Computer

*: Available for KX-TD1232 only.
2.4.7 Caller ID Card Installation

A maximum of two Caller ID Cards (KX-TD193) can be installed to the KX-TD816, and a maximum of three Caller ID Cards can be installed to the KX-TD1232. The Caller ID Cards can be installed to the initially provided CO Line Card and/or to an optional 4-CO Line Unit (KX-TD180), as required. The CO Line Card of KX-TD816 can attach one Caller ID Card, and the CO Line Card of KX-TD1232 can attach two Caller ID Cards. 4-CO Line Unit can attach one Caller ID Card.

(1) Installing to the Initial CO Line Card

KX-TD816

1. Loosen four screws to open the inside cover of the main unit.
   Note If any cards, units, or cords are installed to the main unit, remove them beforehand.

2. Attach the Caller ID Card to the CO Line Card, fitting the connectors.
   One card can be installed to the initial CO Line Card.

3. Put the inside cover back on the main unit and secure the screws.
2.4.7 Caller ID Card Installation

1. Loosen nine screws to open the inside cover of the main unit.
   Note If any cards, units, or cords are installed to the main unit, remove them beforehand.

2. Attach the Caller ID Card(s) to the CO Line Card, fitting the connectors.
   Up to two cards can be installed to the initial CO Line Card.

3. Put the inside cover back on the main unit and secure the screws.
2.4.7 Caller ID Card Installation

(2) Installing to the Optional 4-CO Line Unit

The following procedures must be done before installing the 4-CO Line Unit (KX-TD180) to the main unit.

1. Loosen five screws located on the rear of the 4-CO Line Unit.
2. Remove the back plate and take out the P-board.
3. Attach the Caller ID Card to the P-board, fitting the connectors.
4. Put the P-board back into the cabinet and fix the rear plate with the five screws.

Note
For installing the 4-CO Line Unit to the main unit, refer to Section 2.4.4 "Installing Expansion Unit (KX-TD170 / KX-TD180)."

2.4.8 Doorphone and Door Opener Connection

To connect up to two doorphones (KX-T30865) and up to two door openers (user-supplied), a Doorphone Card (KX TD160) is required.

Installing the Doorphone

1. Loosen the screw to separate the doorphone into two halves.

2. Install the base cover to the wall with two screws.

Note Two kinds of screws are included. Please choose an appropriate one depending on your wall type:

- Type 1: When the doorphone plate has been fixed to the wall.
- Type 2: When you wish to install the doorphone directly to the wall.

3. Connect the wires from the terminal box to the screws located in the front cover.

4. Secure both halves together and re-install the screw.

Doorphone Card Installation

1. Connect a 4-conductor modular connector to the Doorphone Card Cabinet, and pass the cord through the groove on the cabinet.

2. Attach the Doorphone Card Cabinet to the main unit and press it down.

3. Connect the cord to the Doorphone Card Connector.

KX-TD1232  KX-TD816

To the terminal box (See the following page.)
2.4.8 Doorphone and Door Opener Connection

Wiring of the Doorphone

1. Connect the Doorphone Card to the terminal box using a 4-conductor modular connector.
2. Connect the wires of doorphone 1 to the red and green screws of the terminal box.
3. Connect the wires of doorphone 2 to the yellow and black screws of the terminal box.

KX-TD816

4-conductor wiring is required.

KX-TD1232

4-conductor wiring is required.
2.4.8 Doorphone and Door Opener Connection

Connecting Door Openers

1. Loosen the screw to remove the cover.

2. Loosen the screws.

3. Insert the wires coming from the door openers into holes and tighten the screws.

Notes
- For wiring, it is recommended to use UL 1015, AWG 22 twisted wire or the equivalent.
- The wire should be between 1.2 and 2.4 mm (3/64 and 3/32 inch) in diameter including the coating.
- Set the door opener paired with the doorphone.
- The KX-TD1232 is illustrated as a main unit.
2.4.8 Doorphone and Door Opener Connection

Maximum cabling distance of the doorphone and the door opener line
The maximum length of the doorphone and door opener line that connects to the main unit is shown below:

![Diagram of Doorphone and Door Opener Connection]

26 AWG: Under 70 m (230 feet)
24 AWG: Under 113 m (370 feet)
22 AWG: Under 180 m (590 feet)

Notes The KX-TD1232 is illustrated as a main unit.

2-56 Installation
2.4.9 System Connection*

To connect two main units, use the optional System Inter Connection Cards (two) and the Connection Cable (included in the cards).

1. Insert upper side of the System Inter Connection Card into two hooks on the main unit (Master System).
2. Press two corners of the lower side of the System Inter Connection Card.
3. Connect the cord to the System Inter Connection Card connector.
4. Open the latch on the card.
5. Repeat steps 1 through 4 for the Slave System, using the other card.
6. Insert one Connection Cable end to the Master System and insert the other end to the Slave System.
7. Close the latches on both systems.

*: Available for KX-TD1232 only.
8. Open the ROM Cover in the Slave System and set the Master/Slave Switch on the CPU Card to "Slave" position.

9. Turn the power on.

**Notes**
- System Connection is completed about one minute later after the power is turned on.
- To turn the power on for the first time, refer to Section 2.6 "Starting the System for the First Time."

**Programming References**
No programming required.

Section 3, Features,
System Connection

*: Available for KX-TD1232 only.
2.4.10 Backup Battery and Adaptor Card

Connection*

The optional Backup Battery and Adaptor Card are available for KX-TD816. It is a backup power supply to operate all the features in the event of a power failure. In case of power failure, the battery automatically maintains the power to the main unit instantly for about 10 minutes. The battery charges automatically by itself when it is discharged. 
You can choose KX-A216 or KX-A46 for a backup power supply. For connection of KX-A46, see the next page.

1. Loosen the screw of the adaptor card cover and remove the adaptor card cover from the main unit. Then attach the nylon belt.

2. Insert the battery and adaptor card into the frame.

3. Fasten the nylon belt to fix the battery. Fix the adaptor card by a screw (included).

4. Connect the cord of battery to the adaptor card. Remove the backup battery connector cover on the main unit. Then connect the cord of the adaptor card to the backup battery connector.

Notes Make sure of the polarities of the battery.

*: Available for KX-TD816 only.
2.4.11 Battery Adaptor Connection

User-supplied gel cell batteries can be used as a backup power supply in the event of a power failure. In case of power failure, the batteries automatically maintain the power to the main unit instantly. The optional Battery Adaptor, model KX-A46, is required.

The Battery Adaptor should not be exposed to direct sunlight. Keep the adaptor and gel cell batteries away from heating appliances and fire. Place gel cell batteries in an airy place.

Connection

When connecting the battery adaptor, keep the following in mind:
- Make sure of the polarities of batteries and wires.
- Make sure that you do not short the batteries and wires.
- To connect the two batteries, use accessory wire.

1. Assemble the cords and two gel cell batteries (12VDC each) as shown.

2. Insert the plug of the battery adaptor into the battery adaptor connector on the main unit. Connect the ground wire to the ground terminal on the main unit.

3. Turn on the power switch of the battery adaptor.
2.4.11 Battery Adaptor Connection

Wall Mounting

1. Drive the accessory four small screws on the bottom of the unit.
2. Place the metal plates so that the screw heads insert into the slots as shown.
3. Slide the metal plates in the directions of the arrows, and drive the screws.
4. Place the templet on the wall to mark two screw positions, and install the big screws into the wall.
5. Hook the battery adaptor on the screw heads.

Mounting on Concrete or Mortar Walls;

At step 4, drill two holes and drive the anchor plugs with a hammer, flush to the wall, and install the big screws into the anchor plugs.

Notes

- If the Power LED does not go on, check the main unit, battery adaptor, batteries and wiring connection.
- After connection of the battery adaptor, keep the power switch of the main unit switched on. (Otherwise batteries will discharge.)
- To charge the discharged batteries, use a proper charging unit.
- Power Fuse: (8A, 32V)×2
  If the Power LED light goes off during a power failure, the power fuse may have been blown. To change the fuse:
  
  Turn the power switch off.
  Turn the fuse holder in the direction of Arrow ③ while pushing it in the direction of Arrow ②.
  Replace the fuse with the new one. Then turn the power switch on.

- Back-up Duration: depends on the amp/hour of the batteries used.
  e.g. When using two 12 VDC batteries 20 amp/hour, maintenance-free, gel cell batteries, the power is maintained for about three hours.
2.5 Auxiliary Connection for Power Failure Transfer

Power Failure Transfer connects a specific single line telephones to selected CO lines in the event of system power failure, as follows:

**KX-TD816**

CO 1 – Extension (T, R) Jack 1 /
CO 2 – Extension (T, R) Jack 2
CO 5 – Extension (T, R) Jack 9 /
CO 6 – Extension (T, R) Jack 10
Connections of CO 1, CO 2 and the respective extensions require no auxiliary connection. CO 5 and CO 6 require auxiliary connection to implement this feature.

**KX-TD1232**

CO 1 – Extension (T, R) Jack 1 /
CO 2 – Extension (T, R) Jack 2
CO 3 – Extension (T, R) Jack 9 /
CO 4 – Extension (T, R) Jack 10
CO 9 – Extension (T, R) Jack 17
CO 10 – Extension (T, R) Jack 18
Connections of CO 1 through CO 4 and the respective extensions require no auxiliary connection. CO 9 and CO 10 require auxiliary connection to implement this feature.

Insert the modular plugs of connection cords (4-conductor wiring) to the modular jacks of 4-CO Line Unit and 8-Station Line Unit 1. (In the case of KX-TD816, one 8-Station Line Unit is available.)
2.5 Auxiliary Connection for Power Failure Transfer

Notes

- In the event of a power failure, system memory is protected by the factory-provided lithium battery. There is no memory loss except the memories of Camp-on, Saved Number Redial, Last Number Redial, Call Park and Message Waiting.
- The system changes the current connection to the above connection automatically when the power supply stops.
- If DC power is available from backup batteries if AC power fails, the system does not change the current connection to the above connection.
- The KX-TD1232 is illustrated as a main unit, and the KX-TD170 and KX-TD180 are illustrated as an expansion units.

Programming Reference

Section 4, System Programming
[109] Expansion Unit Type

Feature References

Section 3, Features,
Power Failure Transfer
2.6 Starting the System for the First Time

1. Set the Power Switch to the “OFF” position.
2. Set the System Clear Switch to the “CLEAR” position.
3. Plug the AC power cord into the system and an AC outlet.
4. Turn the Power Switch on.
5. Press the Reset Button with a pointed tool.
   (The power indicator will flash.)
6. Slide the System Clear Switch to the “NORMAL” position while the power indicator is flashing (approximately within 10 seconds).

The system will be initialized with default values. The system will also check the CO lines, extensions, and optional cards and units.

KX-TD816
2.6 Starting the System for the First Time

KX-TD1232

Notice - After pressing the Reset Button, slide the System Clear Switch to the "NORMAL" position at step 6 while the power indicator is flashing (approximately within 10 seconds). Otherwise, the system does not start up with the default values.

CAUTION: Once you start up the system and if you turn the power off, do not perform the above procedures to start the system again. Otherwise, your programmed data is cleared. To start the system, just turn the Power Switch on.

The power socket wall outlet should be located near this equipment and be easily accessible.
2.7 System Restart

After starting the system, if the system does not operate properly, restart the system.
Before restarting the system, try the system feature again to confirm whether there definitely is a problem or not.
System Restart causes the following:

1. Camp-on is cleared.
2. Calls on Hold are terminated.
3. Calls on Exclusive Hold are terminated.
4. Calls in progress are terminated.
5. Call Park is cleared.

Other data except the above are not cleared by System Restart.

1. Make sure that the System Clear Switch is set to the “NORMAL” position.
2. Press the Reset Button with a pointed tool.

Notice After pressing the Reset Button, if you notice that the System Clear Switch is set to the “CLEAR” position, never slide the System Clear Switch to the “NORMAL” position in 20 seconds. Otherwise, all the system programming data are reset to default values (Refer to Section 2.8 “System Data Clear”). Slide to the “NORMAL” position over 20 seconds later. Then the system works as before.

If the system still does not operate properly, please see Section 6.1.4 “Using Reset Button.”
2.8 System Data Clear

After storing or changing the system programming data, it is possible to clear your programming data stored in the system, if required. The system will restart with the default setting.

1. Slide the System Clear Switch to the “CLEAR” position.
2. Press the Reset Button with a pointed tool.
3. Return the System Clear Switch to the “NORMAL” position while the power indicator is flashing (approximately within 10 seconds).

Notice: After pressing the Reset Button, return the System Clear Switch to the “NORMAL” position at step 3 while the power indicator is flashing (approximately within 10 seconds). Otherwise, the system is not cleared.
Section 3
Features

This section describes every basic, optional, and programmable feature in alphabetical order. It also provides information about the conditions, connection references, programming required, related features, and operation for every feature.
Absence Message Capability

Description
Once set, this option provides a message, on the display of the calling extension, to show the reason for the called extension’s absence. Nine messages can be programmed as desired which are available for every extension user. There are six pre-programmed default messages. Setting or cancelling a message can be done by individual extension users but only callers with a display telephone can receive the message.

Conditions
- Six default messages, which are changeable, are shown below. The “%” means a parameter to be entered when assigning a message at individual extension.
  1. Will Return Soon
  2. Gone Home
  3. At Ext %%% (extension number)
  4. Back at %% : %% (hour : minute)
  5. Out Until %%% / %%% (month / day)
  6. In a Meeting
- An extension user can select only one message at a time. The selected message is displayed every time the user goes off-hook.

Absence Message Capability

Account Code Entry

Description
An Account Code is used to identify incoming and outgoing CO calls for accounting and billing purposes. The account code is appended to the Station Message Detail Recording (SMDR) call record. For incoming CO calls, account codes are optional. For outgoing CO calls, there are three modes available to enter an account code: Verified-All Calls mode; Verified Toll Restriction Override mode; and Option mode. One mode is selected for each extension on a Class of Service basis. In Verified-All Calls mode, the user must always enter a pre-assigned account code when making any of the following calls.
unless it has previously been stored in memory:

- Call Forwarding – to CO Line
- Last Number Redial
- Line Access
- One-Touch Dialing
- Pickup Dialing
- Saved Number Redial
- Station Speed Dialing
- System Speed Dialing

In Verified-Toll Restriction Override mode, the user can enter a pre-assigned account code only when the user needs to override toll restriction.

In Option mode, the user can enter any account code if needed.

**Conditions**

- An account code can be stored into Memory Dialing (System / Station Speed Dialing; One-Touch Dialing; Pickup Dialing; Call Forwarding – to CO Line).
- The Account button may be used in place of the feature number. A flexible button on the proprietary telephone set can be programmed as the Account button.
- Account code entry after CPC detection must be done within 15 seconds. Otherwise, SMDR call record is activated and entry becomes impossible afterwards.
- If disconnection signal is selected in program [990], field (3) and Flash function is enabled in field (15), the Verified-All Calls extension is allowed to make a CO call using the same line with Flash function.

### Alternate Calling – Ring / Voice

**Description**

This system offers two methods of Intercom Calling – Ring-Calling and Voice-Calling. Ring-Calling informs the called party of an incoming call with a ring tone, while the Voice-Calling uses the calling party’s voice. The called extension user, if he has a proprietary telephone, can select tone or voice calling. If the user selects Voice-Calling, the calling party can talk to the user immediately after confirmation tone. The calling extension user is able to change the calling method pre-selected once at a time by the called extension by pressing “*”; Ring-Calling can be switched to Voice-Calling, and vice versa. This operation is available for both proprietary and single line telephone users during calling.

**Conditions**

Single line telephone users receive calls with Ring-Calling only.

Alternate Calling — Ring / Voice

---

### Answering, Direct CO Line

**Description**

Allows the proprietary telephone user to answer an incoming call by simply pressing the appropriate CO button without lifting the handset or pressing the SP-PHONE / MONITOR button.

**Conditions**

This feature permits the user to specify the desired line to be answered if multiple incoming lines are ringing.

**Programming References**

No programming required.

**Feature References**

Section 3, Features,
CO Line Connection Assignment

**Operation References**

DPT Features,
—User Manual
Answering, Direct CO Line
3 Features

Automatic Callback Busy (Camp-On)

Description
Allows the caller to be informed when the called party has completed the current call.

**Automatic Callback – Extension**
If the caller answers the callback ringing, the called extension automatically starts ringing again.

**Automatic Callback – CO Line**
If the caller answers the callback ringing, the line is automatically selected to allow the user to make a CO call.

Conditions
- Off-hook prior to the start of callback ringing cancels this function. If the callback ringing is not answered in four rings (within 10 seconds) the callback is cancelled.
- More than one extension user can set this function to one extension or CO line at the same time.

Programming References
No programming required.

Automatic Callback Busy (Camp-On)

Automatic Error Logging

Description
The system performs periodic maintenance. When a failure is detected, the system automatically generates an error record. This record can be displayed on a terminal using an EIA (RS-232C) cable, or for KX-TD1232 only, by modem. The EIA / Remote Programming & Diagnosis Manual and its floppy is required to perform this feature. For detailed information, refer to EIA / Remote Programming & Diagnosis Manual.

Conditions
None

Programming References
No programming required.

Feature References
None

Operation References
Not applicable.
Automatic Route Selection (ARS)

Description
Automatic Route Selection (ARS) is a system programmable feature that automatically selects the least expensive route available at the time an outgoing CO call is made. Previous programming eliminates the necessity for the user to dial the access code of the least expensive carrier. All the user has to do is to dial the feature number for ARS, and the number. The appropriate CO line group is selected and an appropriate access code is added before the number is outpulsed.

Conditions
- Toll Restriction check is done before ARS is applied.
- ARS works according to the selected dialing plan. Thus, if the user-dialed number is not found in the dialing plan (Leading Digit Tables), the dialed number is sent out with Local Access (Automatic line access) Code.
- ARS is not applied to a call made by specifying a CO line group. In other words, it is possible to make a CO call by assigning a CO line group directly (ARS Override).
- This feature also applies to Call Forwarding – to CO Line.

Programming References
Section 4, System Programming.
[100] Flexible Numbering, Automatic line access / ARS
[312] ARS Mode
[313] ARS Time
[314]–[321] ARS Leading Digit Entry for Plans 1 through 8
[322]–[329] ARS Routing Plans 1 through 8
[330] ARS Modify Removed Digit
[331] ARS Modify Added Number

Programming Example
The following is an example to show how to program ARS so that the user can call the XYZ Company via the least expensive line.

Step 1. Program ARS to work when the feature number for ARS is dialed by the user. Use the program [312] ARS Mode to enable it.

Step 2. Store the telephone number of an outside party that will use the ARS feature. For example, if the XYZ Company's telephone number is “1-234-567-8910” (not including the line access code), store the leading digits of the number “1234567” (max. 10 digits). To store the numbers, use one of the programs [314] through [321] ARS Leading Digit Entry for Plans 1 through 8 (Leading Digit Tables 1 through 8). Here it is
supposed that we have selected Leading Digit Table 1 to store the number. Remember that Table number “1” matches Route Plan Table 1.

Example: Program Address [314] Leading Digit Table 1

<table>
<thead>
<tr>
<th>Location</th>
<th>Entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>1234567</td>
</tr>
<tr>
<td>02</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>100</td>
<td></td>
</tr>
</tbody>
</table>

Table 1

Step 3. Check all carriers available to call the stored telephone number and their CO line groups. Suppose there are three carriers available to call the XYZ Company and each carrier’s line is assigned to a CO line group as follows:

- Carrier E — CO Line Group 1
- Carrier F — CO Line Group 2
- Carrier G — CO Line Group 3

Then check the fee charged by each carrier:

As shown in Table 2, the least costly route varies with the time of day. To select the least expensive line at a certain time, split the day into three zones as follows:

1. 7:00 a.m. - 1:00 p.m.
2. 1:00 p.m. - 6:00 p.m.
3. 6:00 p.m. - 7:00 a.m.

To program the time zones above, use the program [313] “ARS Time.” Four time zones (Time-A, Time-B, Time-C, Time-D) are provided here. Enter the starting hour for each zone.
Example: Program Address [313] ARS Time Table

<table>
<thead>
<tr>
<th>Time Zones</th>
<th>Entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time-A</td>
<td>7:00 a.m.</td>
</tr>
<tr>
<td>Time-B</td>
<td>1:00 p.m.</td>
</tr>
<tr>
<td>Time-C</td>
<td>6:00 p.m.</td>
</tr>
<tr>
<td>Time-D</td>
<td>Disable</td>
</tr>
</tbody>
</table>

Table 3

**Step 4.** Determine the priority of the CO line groups in each time zone. The table below shows the carrier and CO line groups selected for each priority and time zone:

<table>
<thead>
<tr>
<th>Least Costly Carrier / CO Line Group (Priority 1)</th>
<th>Time -A (7:00-13:00)</th>
<th>Time -B (13:00-18:00)</th>
<th>Time -C (18:00-7:00)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carrier F/Group 2</td>
<td></td>
<td>Carrier F/Group 2</td>
<td>Carrier E/Group 1</td>
</tr>
<tr>
<td>Next Less Costly Carrier / CO Line Group (Priority 2)</td>
<td>Carrier E/Group 1</td>
<td>Carrier G/Group 3</td>
<td>Carrier F/Group 2</td>
</tr>
<tr>
<td>Most Costly Carrier / CO Line Group (Priority 3)</td>
<td>Carrier G/Group 3</td>
<td>Carrier E/Group 1</td>
<td>Carrier G/Group 3</td>
</tr>
</tbody>
</table>

Table 4

To have the system use the priorities shown above, use one of the programs [322] through [329] “ARS Routing Plans 1 through 8” (Route Plan Tables 1 through 8).

As we have already selected Leading Digit Table 1, select Route Plan Table 1. Enter the CO line group numbers in priority order. If the specified CO line group requires digit modification, designate a digit modification table number from 1 through 8.

This table is required to have the system automatically add a specific carrier access code to the user-dialed number.

Example: Program [322] Route Plan Table 1

<table>
<thead>
<tr>
<th>Time -A</th>
<th>Time -B</th>
<th>Time -C</th>
<th>Time -D</th>
</tr>
</thead>
<tbody>
<tr>
<td>COG</td>
<td>Modify</td>
<td>COG</td>
<td>Modify</td>
</tr>
<tr>
<td>Priority 1</td>
<td>2</td>
<td>2</td>
<td>2</td>
</tr>
<tr>
<td>Priority 2</td>
<td>1</td>
<td>1</td>
<td>3</td>
</tr>
<tr>
<td>Priority 3</td>
<td>3</td>
<td>3</td>
<td>1</td>
</tr>
</tbody>
</table>

Table 5

COG: CO Line Group
Modify: Modification Table Number
Step 5. Make up the Digit Modification Table. Carriers E, F and G match CO line groups and Modification Tables as follows and have the following Access Code:

<table>
<thead>
<tr>
<th>Carrier</th>
<th>COG</th>
<th>Mod. Table</th>
<th>Access Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>1</td>
<td>1</td>
<td>1-0-333</td>
</tr>
<tr>
<td>F</td>
<td>2</td>
<td>2</td>
<td>1-0-555</td>
</tr>
<tr>
<td>G</td>
<td>3</td>
<td>3</td>
<td>1-0-666</td>
</tr>
</tbody>
</table>

Table 6

According to Table 6, enter the Access Codes in the respective Modification Tables using the programs [330] “ARS Modify Removed Digit” and [331] “ARS Modify Added Number” as follows:

Example: Program [330] Digit Modification Tables

<table>
<thead>
<tr>
<th>Modification Table 1</th>
<th>Modification Table 2</th>
<th>Modification Table 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remove 0</td>
<td>Remove 0</td>
<td>Remove 0</td>
</tr>
<tr>
<td>Add 10333</td>
<td>Add 10555</td>
<td>Add 10666</td>
</tr>
</tbody>
</table>

Enter the number of the digits to be deleted.

Enter the digits to be added.

Eventually, if Modification Table 1 is applied, the user-dialed number “9-1-234-567-8910” is modified to “9-10333-1-234-567-8910” to access the least expensive Carrier E.

Similarly, if Modification Table 2 is applied, it is modified to “9-10555-1-234-567-8910” to access Carrier F.

Enter the “Removed Digit” program when it is necessary to delete some leading digits from the user-dialed number. For example, if the user manually dials a Carrier Access Code but the carrier is not the least expensive, modification is required. For example, to delete “10333” from the beginning of the user-dialed number and to add “10555,” enter “5” in “Removed Digit” program. Enter “10555” in “Added Number” program. When “9-10333-1-234-567-8910” is dialed, “9-10333-1-234-567-8910” is sent to the CO line.

Not Restricted

Is ARS Access Code (Default: 9) dialed?

Yes

Are the leading digits found in a Leading Digit Table?

Yes

Obtains applicable Route Plan Table number from the Leading Digit Table.

Determines the CO line group of the priority 1 in the Route Plan Table by the present time of the day.

Is there any line available in the CO line group of the priority 1?

Yes

Obtains applicable Modification Table number for the CO line group from the Route Plan Table.

Modifies the digits.

Calls.

Yes

Is the CO line group of the priority 2 assigned in Route Plan Table?

Yes

Is there any line available in the CO line group of the priority 2?

Yes

Sends busy tone.

No

Is there any line available in the CO line group of the priority 3?

No

Sends busy tone.

Yes

Is there any line available in the CO line group of the priority 3?
Automatic Station Release

Description
After going off-hook, if an extension user fails to dial any digits within a specified time period, the user will be disconnected from the line after reorder tone is sent. To get a line again, the user must go back on-hook and then off-hook.

Conditions
This function works in the following cases:
When making a call
(1) The first digit has not been dialed within 10 seconds.
(2) After a digit is dialed, the next one is not dialed within five seconds (Intercom call only).

Background Music (BGM)

Description
Allows the proprietary telephone user to listen to background music from the monitor speaker on the telephone.

Conditions
• It may be required to connect a user-supplied external music source, such as a radio. One external music source can be connected to KX-TD816, and up to two sources can be connected to KX-TD1232 per system.
  It is required to select the internal or external music source by System Programming.
• It is required to select a music source used for BGM by System Programming.
• The music is interrupted while off-hook.

Background Music (BGM) – External

Description

Background music (BGM) can be broadcast in your office through external pagers. The BGM can be turned on and off by Operator 1 only.

Conditions

• It is required to connect an external pager. The pager is a user-supplied item. One pager and one external music source can be installed in KX-TD816, and up to two pagers and up to two external music sources can be installed in KX-TD1232 per system.
• Each pager can be programmed to send BGM or not.
• Priority of access to external pager is: (1) TAFAS; (2) Paging; (3) BGM. Higher priorities will override BGM.

3 Features

Busy Lamp Field

Description
The LED (Light Emitting Diode) indicators of the DSS (Direct Station Selection) buttons, each of which corresponds to a selected extension, tell whether the corresponding extensions are idle or busy.

Conditions
- This function is available for DSS buttons on DSS Consoles and for flexible CO buttons assigned as DSS buttons on proprietary telephones.
- A DSS button indicator lights red if the corresponding extension is busy.

Busy Station Signaling (BSS)

Description
When attempting to call a busy extension, Busy Station Signaling allows you to signal the user on the phone to answer your call. The called extension user hears a Call Waiting tone and is able to answer the call.

Conditions
- This feature is effective if the called extension has enabled Call Waiting. If Call Waiting is enabled, the caller will hear ringback tone; if not, the caller will hear reorder tone.
- If the called party is provided with Off-Hook Call Announcement (OHCA) function, the caller can announce the call through the speaker.

Programming References
No programming required.
Button, Direct Station Selection (DSS)

Description
DSS button permits the proprietary telephone user one-touch access to other extension users.

Conditions
• A flexible CO button on a proprietary telephone can be assigned as a DSS button using either System or Station Programming.
• DSS buttons are provided on DSS Consoles with default setting. Changing the setting is possible from the paired telephone using Station Programming.
• Once a button is assigned as a DSS button, it provides Busy Lamp Field (BLF) status.
• The mode of a DSS button on a DSS Console / proprietary telephone can be programmed to disconnect the CO line and calls the extension or hold and transfer the call to the extension (One-Touch Transfer by DSS Button).

</table>

In the table, "✔" indicates that the feature can be assigned to the button.

Conditions

- A CO line can only appear on one Single-CO button of any given telephone. A station can only appear on one DSS button of any given telephone or DSS Console.
- It is possible to have multiple appearances of the same Group-CO or Loop-CO buttons on the same telephone. Incoming and outgoing calls on the line are shown on the button in the following priority. Single-CO > Group-CO > Loop-CO

Button, Group-CO (G-CO)

Description
To support efficient utilization of CO lines, a group of CO lines (CO line group) can be assigned to a CO button. The function is referred to as Group-CO (G-CO). The G-CO button works in conjunction with the DIL 1:N feature. Any incoming call from any CO line in the CO line group arrives at the G-CO button. To make a CO call, the user can access an idle CO line in the group by simply pressing the dedicated G-CO button.

Conditions
- No G-CO button is originally provided on a proprietary telephone (PT).
  It is programmable on a CO button by either System or Station Programming.
- It is needed to program the extension for receiving and/or originating calls on CO lines.
- It is possible to assign the same CO line group to more than one G-CO buttons on the same PT.
- It is possible to assign the same line to an S-CO button and to a G-CO button.
- Immediate, delayed, no ringing or no incoming call (disable) can be selected on an extension-CO line basis.
- The digital PT user can choose a desired ringer frequency for each G-CO button by System or Station Programming.

Button, Loop-CO (L-CO)

Description
All CO lines can be assigned to a flexible CO button on a proprietary telephone (PT). The assigned button serves as a Loop-CO (L-CO) button. An incoming call on any CO line arrives at the L-CO, unless there are S-CO or G-CO buttons associated with the line or unless the button is already in use. To make a CO call, the PT user can simply press the dedicated L-CO button.

Conditions

• No L-CO button is originally provided on a PT. A flexible CO button can be assigned as an L-CO button in either System or Station Programming.
• It is possible to assign more than one L-CO button on a PT.
• Pressing the L-CO button provides the same operation as dialing the automatic line access code. This results in Automatic Line Access or Automatic Route Selection (ARS), if programmed.
• Immediate, delayed, no ringing or no incoming call (disable) can be selected on an extension-CO line basis.
• The digital PT user can choose a desired ringer frequency for each L-CO button by System or Station Programming.

Ringing Tone Selection for CO Buttons
**Button, Single-CO (S-CO)**

**Description**
A Single-CO (S-CO) button is a CO line access button. This allows the proprietary telephone user to access a specific line by pressing an S-CO button. An incoming call can be directed to an S-CO button.

**Conditions**
- The default setting for CO buttons is changeable. (Flexible CO Button)
- An S-CO button provides CO line status.
- It is possible to assign one CO line to both an S-CO and a G-CO button.
- If Automatic Route Selection (ARS) is set, it is overridden by an outgoing call made by pressing the S-CO button.
- Incoming calls appear on the proprietary telephone, when an extension is assigned as the incoming call destination and an S-CO, G-CO and/or L-CO button is assigned.
- Immediate, delayed, no ringing or no incoming call (disable) can be selected on an extension-CO line basis.
- The digital PT user can choose a desired ringing tone type for the S-CO button by System or Station Programming.

✓: The button is provided on the designated telephones.
†: The button is provided with an LED (Light Emitting Diode).
*: The buttons which can be changed to function as a feature button are called flexible buttons.
!: The button is provided without an LED.
(x): Shows the number of buttons only if multiple buttons are provided.
The functions of the listed buttons are described below:

**AUTO ANSWER / MUTE:** This dual function button is used for extension auto-answer and microphone mute during a conversation.

**AUTO DIAL / STORE:** Used for System Speed Dialing and storing program changes.

**CO (Central Office line):** Can be re-assigned to a different CO or to various feature buttons.

**CONF (Conference):** Used to establish a three-party conference.

**FLASH:** Allows you to disconnect the current call and originate another call without hanging up (Flash). Sends a flash signal to the Central Office or a host PBX to access their features (External Feature Access).

**Function:** Used to perform the displayed function / operation.

**FWD / DND (Call Forwarding / Do Not Disturb):** Used to program Call Forwarding, set Do Not Disturb.

**HOLD:** Used to place a call on hold.

**INTERCOM:** Used to make or receive intercom calls.

**MESSAGE:** Used to send a message or display current message.

**MONITOR:** Used for handsfree operation.

**PAUSE:** Inserts a pause in a speed dial number. With an analog proprietary telephone, it is used as the PROGRAM button.

**PF (Programmable Feature):** This flexible button can be programmed to be a One-Touch Dialing, FWD / DND, SAVE, Account, CONF (Conference) or Voice Mail Transfer button, as desired.

**PROGRAM:** Used to enter / exit Programming mode.

**REDIAL:** Used for Last Number or Automatic Redial.

**SAVE:** Used to store a dialed telephone number for Saved Number Redial.

**SHIFT:** Used to access the second level of Soft button function.

**Soft:** Pressing a Soft button performs the function / operation appearing on the bottom line of the display.

**SP-PHONE (Speakerphone):** Used for handsfree operation. Pressing the button causes the telephone to switch between handset and handsfree operation.

**TRANSFER:** Transfers a call to another extension or external destination.

**VOLUME:** Used to adjust the ringer, speaker, handset and headset volume and the display contrast.
3 Features

Conditions

- Certain buttons are equipped with light indicators (LED’s) to show line or feature status.
- CO buttons can be classified according to the following three types: Single-CO (S-CO) button / Group-CO (G-CO) button / Loop-CO (L-CO) button

CALL FORWARDING FEATURES – SUMMARY

Description

Call forwarding features enable you to have your calls forwarded to a specified destination. You may specify the circumstances under which your calls are forwarded. The following Call Forwarding features are available:
- Call Forwarding – All Calls
- Call Forwarding – Busy
- Call Forwarding – Busy / No Answer
- Call Forwarding – Follow Me
- Call Forwarding – No Answer
- Call Forwarding – to CO Line

Call Forwarding – All Calls

Description

This feature is used when you want all your calls to be automatically re-directed to another extension.

Conditions

- Types of calls which are forwarded by this feature are:
  - CO calls – DIL 1:1; DISA*; Intercept Routing
  - Intercom calls – Extension; Transfer
- There can only be one stage of Call Forwarding, if a call is forwarded to an extension which is also in Call Forwarding. In this case, Station Hunting can be activated for the forwarded call.

*: Available for KX-TD1232 only.
- Although calls are forwarded, Message Waiting is not. The MESSAGE button indicator is lit on the originally called extension.
- If an extension in Call Forwarding is also in a Hunt group, a call directed to the extension is forwarded. Station Hunting still applies for calls directed to other extensions in the Hunt group.
- Setting this function cancels other Call Forwarding or Do Not Disturb functions, if any.
- A Floating Station cannot be programmed as the forwarded destination.

Call Forwarding – Busy

Description
A call directed to your extension is forwarded to another extension if your telephone is busy.

Conditions
- Types of calls which are forwarded by this feature are:
  CO calls – DIL 1:1; DISA*: Intercept Routing
  Intercom calls – Extension: Transfer
- There can only be one stage of Call Forwarding, if a call is forwarded to a station which is also in Call Forwarding. In this case, Station Hunting is activated for the forwarded call.
- Although calls are forwarded, Message Waiting is not. The MESSAGE button indicator is lit on the originally called extension.
- If an extension in Call Forwarding is also in a Hunt group, a call directed to the extension is forwarded. Station Hunting still applies for calls directed to other extensions in the Hunt group.
- Setting this function cancels other Call Forwarding or Do Not Disturb functions, if any.
- A Floating Station cannot be programmed as the forwarded destination.

Call Forwarding — Busy

Call Forwarding – Busy / No Answer

Description

Your calls are forwarded to another extension if your extension is busy or you do not answer the call in a pre-determined time.

Conditions

• Types of calls which are forwarded by this function are:
  CO calls – DIL 1:1; DISA*; Intercept Routing
  Intercom calls – Extension; Transfer
  • This function operates the same way as Call Forwarding – Busy and Call Forwarding – No Answer.
  • There can only be one stage of Call Forwarding if a call is forwarded to a station which is also in Call Forwarding. In this case, Station Hunting is activated for the forwarded call.
  • Although calls are forwarded, Message Waiting is not. The MESSAGE button indicator is lit on the originally called extension.
  • If an extension in Call Forwarding is also in a Hunt group, a call directed to the extension is forwarded. Station Hunting still applies for calls directed to other extensions in the Hunt group.
  • Setting this function cancels other Call Forwarding or Do Not Disturb functions, if any.
  • A Floating Station cannot be programmed as the forwarded destination.

*: Available for KX-TD1232 only.

Features 3-23
Call Forwarding – Follow Me

Description
If you forget to set Call Forwarding – All Calls before you leave your desk, this allows you to set the same function from the destination extension.

Conditions
• Same as the conditions of Call Forwarding – All Calls.
• It is programmable to enable or disable this feature on Class of Service basis.

Call Forwarding – No Answer

Description
Calls to your extension are forwarded to another extension if you do not answer the call in a pre-determined time.

Conditions
• Types of calls which are forwarded by this function are:
  CO calls – DIL 1:1; DISA*; Intercept Routing
  Intercom calls – Extension; Transfer
• This function operates if an incoming call is not answered in a specific period of time. Therefore, this function also applies if your extension is busy and cannot answer the incoming call within the time.
• There can only be one stage of Call Forwarding if a call is forwarded to a station which is also in Call Forwarding. In this case, Station Hunting is activated for the forwarded call.
• Although calls are forwarded, Message Waiting is not. The MESSAGE button indicator is lit on the originally called extension.
• If an extension in Call Forwarding is also in a Hunt group, a call directed to the extension is forwarded. Station Hunting still applies for calls directed to other extensions in the Hunt group.

*: Available for KX-TD1232 only.

Call Forwarding No Answer

Call Forwarding – to CO Line

Description
Calls directed to your extension will be sent to an external destination. The outside telephone number must be pre-programmed.

Conditions
• Types of calls which are forwarded by this function are:
  CO calls - DIL 1:1: DISA*
  Intercom calls - Extension: Transfer
• The forwarding extension’s Toll Restriction, Automatic Route Selection (ARS) and Account Code Entry requirements still apply.
• Although calls are forwarded, Message Waiting is not. The MESSAGE button indicator is lit on the originally called extension.
• If an extension in Call Forwarding is also in a Hunt group a call directed to the extension is forwarded. Station Hunting still applies for calls directed to other extensions in the Hunt group.
• Setting this function cancels other Call Forwarding or Do Not Disturb functions, if any.
• Class of Service programming determines the extensions that are able to perform the function.
• If an extension is limited by the program [502] “Extension-to-CO Line Call Duration Limit” according to its Class of Service, the extension is unable to forward a CO call to a CO line.

*: Available for KX-TD1232 only.
If a call between an extension and an outside party is established by this feature, the duration of the call period can be restricted depending on the setting of a system timer. If a call between two outside parties is established by this feature, the duration of the call is determined by another system timer. Alarm tone is generated to both outside parties 15 seconds before the time-out. The call is disconnected at the time-out.

Call Hold – CO Line

Description

Allows the extension user to put a CO call on hold. The held call can be retrieved from the user who held it or from any other extension.

Conditions

- With a single line telephone, the user can hold only one call whether it is an extension or CO call.
- Music is sent to the party on hold, if available (Music on Hold).
- If a call on hold is not retrieved in a specific period of time, Hold Recall results.
- If an outside party is placed on hold and not retrieved in 30 minutes, it is automatically disconnected.

Programming References

- [100] Flexible Numbering, Call hold
- [200] Hold Recall Time
### Call Hold – Intercom

**Description**
This is used to place an intercom call on hold. The held call can be retrieved from the user who held it or from any other extension.

**Conditions**
- Only one intercom call can be placed on hold in a telephone at a time (up to 10 calls in the system – Call Park). With a proprietary telephone, CO calls and one intercom call can be placed on hold at the same time. With a single line telephone, either one CO or intercom call can be held.
- If a call on hold is not retrieved in a specific period of time, Hold Recall results.
- Music is sent to the party on hold, if available (Music on Hold).

**Programming References**
- Section 4, System Programming,
  - [100] Flexible Numbering. Call hold

### Call Hold, Exclusive – CO Line

**Description**
Allows the proprietary telephone user to prevent any other extension users from retrieving a held CO call. Only the user who held it can retrieve the call.

**Conditions**
- If a call on hold is not retrieved in a specific period of time, Hold Recall results. After Hold Recall results, the held call can be retrieved from any other extension.
Features

- If an outside party is placed on hold and not retrieved in 30 minutes, it is automatically disconnected.
- Music is sent to the party on hold, if available (Music on Hold).

Call Hold, Exclusive – Intercom

Description
Allows the proprietary telephone user to prevent any other extension users from retrieving a held intercom call. Only the user who held it can retrieve the call.

Conditions
- Only one intercom call can be placed on Call Hold or Exclusive Call Hold at a time.
- If a call on hold is not retrieved in a specific period of time, Hold Recall results. After Hold Recall results, the held call can be retrieved from any other extension.
- Music is sent to the party on hold, if available (Music on Hold).

Call Hold Retrieve

Call Park

Description
Allows the extension user to place a held call into a system parking area. This releases the user from the parked call to perform other operations. The parked call can be retrieved by any other extension user.
Conditions

- The system contains 10 parking areas, each of which has its own call park number. Up to 10 calls can be parked at the same time in the system. Under the System Connection all users may access the same call parking area. The number of holding slots remains at 10.
- If a parked call is not retrieved in a specific period of time, Transfer Recall starts.
- If a parked call is not retrieved in 30 minutes, it is automatically disconnected.
- Confirmation tone is sent to the user when the parked call is retrieved. Eliminating the tone is programmable.

Call Pickup, Group

Description
Allows the extension user to answer a call that is ringing at another telephone, if the call is ringing within the user's extension group.

Conditions
- The user can pick up an incoming CO, intercom, or doorphone call.
- The priority of Group Call Pickup is as follows:
  CO call > Transferred call > Extension call > Doorphone call
- Group Call Pickup starts with the lowest jack number.
- Confirmation tone is sent to the user when the call is picked up. Eliminating the tone is programmable.

Call Splitting

Description
Allows the extension user to alternate between two other parties. Placing the current call on hold allows the user to have a conversation with the other party.

Conditions
Call Splitting is impossible during Doorphone Call or Paging.

Programming References
No programming required.

Feature References
None

Operation References
DPT Features, SLT Features;
Call Splitting
3 Features

CALL TRANSFER FEATURES – SUMMARY

Description

Call Transfer features allow the user to transfer a call to another party. This operation can be screened or unscreened. Screened call transfer is used when you want to announce the call to the other party before completing the transfer. Unscreened call transfer immediately releases the caller to the called party. An intercom or a CO call can be transferred to an extension or to an outside party by:

- Call Transfer, Screened – to CO Line
- Call Transfer, Screened – to Extension
- Call Transfer, Unscreened – to Extension

Call Transfer, Screened – to CO Line

Description

Allows the proprietary telephone user to voice-announce to the external party and transfer the call.

Conditions

- Class of Service programming determines the extensions that are able to perform it.
- If a call between two external parties is established by this feature, the duration of the call period is restricted by a system timer. Hold Recall is generated to the extension who transferred the call 50 seconds before the time-out. Also Hold Alarm tone is generated to both outside parties 15 seconds before the time-out. The call is disconnected at the time-out unless the extension restores the conference.
- Transferring a call to an external party cannot be performed from a single line telephone.

Call Transfer — to Extension

Call Transfer, Unscreened – to Extension

Description
Allows the user to transfer an intercom or CO call to directly transfer to an extension party. After dialing the destination extension, the user replaces the handset while hearing ringback tone.

Conditions
- If the destination party does not answer within the transfer recall time, the call will return to the user or Operator 1. You can select the desired one by system programming.
- This function is possible when the destination is sending ringback or busy tone. If the destination is busy, Camp-On Transfer occurs.
- The ringing signal pattern follows the regular ringing pattern depending on the party being transferred: CO or extension call ringing.
- It is possible for any extension user to transfer a call to the floating modem. *
- If music on hold is enabled, music is sent to the caller while being transferred. It is system-programmable whether to send ringback tone or music on hold to the caller by program [990], Field (1).
- The destination extension must have a CO button which is common to the CO line in use by the transferring party.

Call Waiting

Description
While in conversation, a call waiting tone informs the user of another incoming call that is waiting. He or she can answer the second call by disconnecting or placing the current call on hold. Call waiting tone can be enabled or disabled by dialing the appropriate feature number.

Conditions
• The call waiting tone is generated when a CO call except DISA* call, or a doorphone call comes in or when an extension caller executes Busy Station Signaling.
• Setting Data Line Security temporarily cancels Call Waiting which has been turned on by an extension user.
• For proprietary telephone users, two types of call waiting tone are provided to prevent them from missing the tone as shown below: A proprietary telephone user can select the desired type by Station Programming.

Programming References

Call Waiting Tone Type Assignment

* Available for KX-TD132 only
Caller ID

Description
Provides the display proprietary telephone user with a caller's information, such as his / her name and telephone number, on the CO line assigned to receive Caller ID service calls.

Conditions
- Up to 250 Caller ID entry numbers can be stored in the table called "Caller ID Table" in the system. Each entry can consist a caller’s telephone number and name.
- It is required to assign the CO lines which Caller ID Service is offered by a Central Office.
- When receiving a CO call with Caller ID, the display on the proprietary telephone shows as follows:
  - Example a) Display of the caller’s telephone number:
  
  ![Example a) Display of the caller’s telephone number]

  - Example b) Display of the caller’s name:
  
  ![Example b) Display of the caller’s name]

Calling Party Control (CPC) Signal Detection

**Description**
The Calling Party Control (CPC) Signal is an on-hook indication (disconnect signal) sent from the CO line when the telephone is hung up at the other end. To support efficient utilization of CO lines, the system monitors their state and when CPC Signal is detected from a line, the system disconnects the line and informs the extension with reorder tone.

**Conditions**
- CPC Signal Detection is enabled or disabled on incoming and outgoing CO calls by System Programming.
- Generally CPC Signal Detection works on incoming CO calls, and does not work on outgoing CO calls (except once they are placed on Call Hold, Exclusive Call Hold or Consultation Hold). In this case, if the extension user remains off-hook after the completion of an outgoing CO call, the system does not release all the switches used to establish the connection, and a CO line connected will continue to be seized. To prevent this, it is administrable to make CPC Signal Detection work on outgoing CO calls. (Note: Some Central Offices may send CPC-like signals during the dialing sequence and an attempt to make a call may be terminated. If your CO does not send such signals, it is recommended to make CPC Signal Detection work on outgoing CO calls.)
- If your Central Office does not send CPC-like signals, it is also effective to limit the dialed numbers during a call by the program [991] “COS Additional Information” on a Class of Service basis to prevent unauthorized calls.
- If CPC Signal is detected during a Conference call, the line is disconnected and the remaining two parties maintain the call.
- If CPC Signal is detected during a call between a DISA* caller and an extension or an outside party, the line is disconnected.

Class of Service (COS)

Description
COS is used to define the features which are allowed for a group of extensions. Each extension is assigned a COS number. Eight Classes of Service are available.

Conditions
- A list of the programmable items is given below:
  1. The ability to forward a call to an outside party – enable / disable
  2. The ability to transfer a call to an outside party – enable / disable
  3. The ability to override Do Not Disturb of the called station – enable / disable
  4. Account Code Entry operation – verified - all calls / verified - toll restriction override / option
  5. Executive Busy Override – enable / disable
  6. Executive Busy Override Deny – enable / disable
  7. Outgoing call restriction level (Day mode / Night mode) 1 through 8
  8. Restriction of CO call duration – enable / disable
  9. The number of permitted dialing digits during a CO call
  10. The ability to set Call Forwarding – Follow Me – enable / disable
- A Class of Service can be assigned to a DISA* user code.

CO Line Connection Assignment

Description
This allows you to specify the CO lines connected to your system to prevent an extension user from originating a CO call by selecting a line which is not connected. An idle line is selected from the connected ones when an extension user makes an Automatic Line Access.

Conditions
- If the user tries to make a call with a disconnected line, reorder tone sounds to indicate that the line is out of use.
- This is effective for all outgoing calls including DISA.*

CO Line Connection Assignment – Outgoing

Description
Allows you to assign the CO line an extension user can use for outgoing calls. This feature is useful to prevent unauthorized toll calls.

Conditions
- When an extension user tries to make a CO call on a disallowed CO line, reorder tone is sent to indicate that the user cannot use the CO line.
- Day and Night Service are individually programmed. (Night Service)

Programming References
Section 4, System Programming,

CO Line Group

Description

CO lines can be grouped into up to eight CO line groups (for example, WATS, DDD, FX services, etc.). This allows extensions to call outside parties without designating a specific CO line, since a CO line is automatically selected from the designated CO line group. All CO lines belonging to a CO line group follow the assignment determined for that CO line group. A list of assignments for each CO line group is shown as follows:

- The destination of Intercept Routing
- Disconnect Time
- Flash Time
- Host PBX Access Code
- Pause Time (used in Speed Dialing and Flash)

Conditions

- Each CO line can only belong to one CO line group.
- CO lines in a CO line group are selected uniformly if all lines belong to the same system.
- If System Connection* is employed, a CO line group can include CO lines in both systems. In this case, a CO line is first selected from the user's system. If all lines in the user's system are in use, a line in the other system is selected.

3 Features

Conference

Description

The system supports three-party conference calls, including outside or inside parties. During a two-party conversation, the extension user can add a third party to their conversation, thereby establishing a conference.

Conditions

- Possible conference combinations are: 1-inside and 2-outside: 2-inside and 1-outside; and 3-inside.
- Up to six conference calls are allowed simultaneously.
- A three-party call is also established by Executive Busy Override or Privacy Release.
- When a two-party call is changed to a three-party call and vice versa, a confirmation tone is sent to all three parties. Eliminating the tone is programmable.
- The third party must have a CO button which is common to the CO line in use by the original parties.

Conference

Conference, Unattended

Description

When a proprietary telephone user is in a conference with two outside parties, the user can leave the conference to allow the other two parties to continue conversation. This is called an Unattended Conference. The user may return to the conference, if desired.

Conditions

- An Unattended Conference can be established when the extension is allowed to transfer a call to a CO line.
- The duration of an unattended conference is restricted by a system timer. Hold Recall results to the extension user who left the conference 50 seconds before the time-out. Alarm tone is generated to both
outside parties 15 seconds before the time-out. The call is disconnected at the time-out unless the extension returns to the call.

Confirmation Tone

Description
At the end of many different functions the system confirms the success of the operation by sending a confirmation tone to the extension user through the speaker of the telephone.

Confirmation tone 1:
(a) Indicates that the new setting differs from the previous setting.
(b) Set or cancel the Electronic Station Lockout.

Confirmation tone 2:
(a) Indicates that the new setting is identical to the previous setting.
(b) In addition, sent when various features are successfully performed or accessed. (e.g. Call Hold; Automatic Callback Busy)
(c) Sent when accessing external paging equipment. (e.g. Paging - All; Paging - External) Confirmation tone from external pagers can be enabled or disabled.
Confirmation tone 3:
Sent when a conversation is established just after dialing.
For example, when accessing the following features by the feature numbers:
- Call Park Retrieve
- Call Pickup
- Hold Retrieve
- Paging / Paging Answer
- TAFAS Answer
This tone can be eliminated by System Programming so that the user can start talking instantly.

Confirmation tone 4:
Sent when moving from a two-party call to a three-party call, and vice versa. (These are caused by Executive Busy Override, Conference, or Privacy Release.) It is possible to eliminate this tone by System Programming.

Conditions
Confirmation Tone 1 and 2 are provided to reconfirm the assigned feature.

### Consultation Hold

**Description**

Allows the extension user to place a call on hold temporarily to transfer it or make a Conference call or make Call Splitting. The held call can be retrieved from other extensions.

**Conditions**

- With a proprietary telephone, Consultation Hold is established by pressing TRANSFER or CONF button. With a single line telephone, it is established by pressing the hookswitch lightly.
- With a single line telephone, the user can hold a call only to transfer it.
- Doorphone calls and paging calls cannot be placed on Consultation Hold.
- A new incoming call will not arise at the extension which is keeping a call on Consultation Hold. The extension is regarded as busy.
- If a calling party is placed on hold, music is sent to the party if available. (Music on Hold)
- If a call on hold is not retrieved in a specific period of time, Transfer Recall starts.
- If a CO call is placed on hold and not retrieved in 30 minutes, it is automatically disconnected.

3  Features

Data Line Security

Description  Data Line Security is a function that can be set on individual extensions. Once set, communication between the extension and the other end is protected from any signal such as Call Waiting, Hold Recall and from Executive Busy Override. Data equipment or a facsimile may be connected to an extension jack so that the user can perform data communications. During the communication, Data Line Security maintains secure data transmission against tones or barging in from other extensions.

Conditions  
• Assigning Data Line Security always offers conversation privacy unless Privacy Release is executed.
• If one extension in a conversation has set Data Line Security, it applies to the both extensions.

Programming References  
Section 4, System Programming, [100] Flexible Numbering, Data line security set / cancel

Feature References  None

Operation References  DPT Features, SLT Features; —User Manual

Data Line Security

Dial Tone, Distinctive

Description  Four types of dial tone patterns are available to give some information about features enabled on the telephone set.

Dial tone 1: Normal dial tone. None of the features listed below are enabled.

Dial tone 2: Sounds when any one of the features below are set. Absent Message Capability Background Music (BGM) (for proprietary telephones only) Call Forwarding Call Pickup Deny Call Waiting Data Line Security
Features

Do Not Disturb (DND)
Electronic Station Lockout
Executive Busy Override Deny
Pickup Dialing
Timed Reminder

Dial tone 3: Sounds when performing Account Code Entry. Also sounds when answering Timed Reminder call.

Dial tone 4: Sounds when messages are waiting for the extension.

Conditions
None

Programming References
No programming required.

Feature References
None

Operation References
Not applicable.

Dial Type Selection

Description
Allows you to select the desired dialing mode for each CO line regardless of the type of extension originating the call (rotary or tone).

There are three dialing modes available:

**DTMF (Dual Tone Multi-Frequency) Mode**
The dialing signal from an extension, either in tone or rotary, is converted to tone dialing. DTMF signals are transmitted to the CO line.

**Pulse Dial (Rotary) Mode**
The dialing signal from an extension, either in tone or rotary, is converted to rotary dialing. Rotary pulses are
Features

transmitted to the CO line.

Call Blocking Mode
Set this mode on CO lines that can receive both tone and rotary, but under contract with the Central Office for rotary only. When dialing to the line using a touch-tone telephone, only rotary is sent to the Central Office.

Conditions

- It is possible for the extension user to temporarily convert the pre-assigned rotary dialing mode to DTMF mode (Pulse to Tone Conversion). DTMF mode cannot be changed to rotary.
- Either DTMF or rotary dialing can be assigned for the DISA (Direct Inward System Access)* outgoing line. With DISA*, Pulse to Tone Conversion is not possible.
- In case a CO line can receive both DTMF and pulse signals and is contracted for DTMF with a Central Office, DTMF mode should be selected for the line. If it is contracted for rotary mode, Call Blocking mode should be selected for the line.
- If a line is assigned Pulse Dial mode, select an appropriate pulse speed, pulse break ratio, and inter-digit pause for the line, if needed. If a line is assigned DTMF, select an appropriate DTMF duration for the line, if needed.
- After a held call is retrieved, the dial mode goes back to the one originally programmed on the CO line.

Direct In Lines (DIL)

**Description**
Enables an incoming CO call to go directly to one or more answering points.
DIL 1:1 puts an incoming CO call to a single destination.
Assignable destinations are: (1) extension; (2) modem*; (3) external pager; (4) DISA* message. This CO line can be used by multiple extension users to make calls but can be used by only one extension to receive calls.
DIL 1:N puts an incoming CO call to multiple destinations.
Assignable destinations are extensions only. This CO line can be used by multiple extension users to make and receive calls.
Both DIL 1:1 and 1:N can have different destinations for day and night modes (Night Service).

**Conditions**
- If a CO line is programmed for both DIL 1:1 and DIL 1:N, it is regarded as a DIL 1:1 line.
- DIL 1:1 to the modem* allows the caller to perform remote administration. DIL 1:1 to an external pager sounds the pager when receiving incoming calls (TAFAS feature). DIL 1:1 to DISA message allows an external caller to access the system directly (DISA feature).*

**Programming References**

**Operation References**
Not applicable.

Direct Inward System Access (DISA)*

**Description**
Allows a CO caller to access specific system features as if the caller is an extension in the system. The caller can have direct access to features such as:
- Placing an intercom call to an extension, an operator, a modem (for remote system administration) or an external pager (for TAFAS).
- Calling an external party
For external calling, it is necessary to program either Non Security or CO Line Security mode. In Non Security

*: Available for KX-TD1232 only.
mode, any outside caller may make CO calls. In CO Line Security mode, it is necessary to enter a pre-assigned DISA user code to make CO calls. This prevents the caller from making unauthorized calls. However, when making a CO call by Call Forwarding – to CO Line, the call is exceptionally permitted.

An Outgoing Message can be programmed for the DISA feature. When a caller reaches the DISA line, a pre-recorded message will greet the caller. Two different DISA messages may be recorded by Operator 1. Thus, one message may be used in day mode and the other in night, or they can be used for different CO lines.

**Conditions**

- The following items are required for the DISA feature:
  1. An optional DISA Card must be installed.

  2. The Floating Station number of the DISA message should be assigned as the DIL 1:1 destination. This assigns the DISA line and the message accessed by external callers.

  3. The DISA message(s) should be recorded by Operator 1.

- Only one DISA card can be installed per system. During System Connection, the DISA card is effective only for the CO line used in the same system.

- A DISA call is answered after ringback tone is returned to the caller after the DISA Delayed Answer Time expires. The caller can dial during the message.

- The DISA line can be used to originate CO calls if the security code (if required) has been dialed.

- The floating number of a DISA message may be selected as the destination of Intercept Routing.

- This system can store up to four programmable DISA user codes. Each code should be unique. It is possible to assign a Class of Service number to each code. In CO Line Security system, the caller must enter one of the stored codes after accessing a CO line. The Class of Service of the code defines Toll Restriction.

- The duration of CO-to-CO calls can be limited. When the specified time expires, both lines are disconnected unless the caller re-tries or prolongs the time, if available. Warning tone is generated to both parties 15 seconds before the time-limit at five-second intervals.

- Prolonging the call duration can be allowed from one to seven minutes or disallowed. The caller can attempt this several times to prolong it further.

- To detect the end of a CO-CO call, CPC Signal Detection and Tone Detection can be assigned.

- **CO call is made.**
  - DISA Delayed Timer starts.
  - The caller reaches the DISA line.

  - **All resources are busy.**
    - Is IRNA employed?
      - Yes: Intercept Routing starts.
        - No: Kept waiting with ringback tone.
    - No: One of the resources is available. (Outgoing Message is sent.)
      - Making an extension call
        - TAFAS
          - Is IRNA employed?
            - Yes: Intercept Routing starts.
            - No:
              - Making a CO call
                - Intercept Routing starts.
                - No Answer Timer starts.
                  - Disconnected after 10 seconds
                    - No
                      - Yes: The call is accepted.
Display, Call Information

Description
The display proprietary telephone shows the user the following call information:

- **Extension number and name**
  These are shown when calling or when called by an extension user and during an established intercom call.
  A display example: **123: Smith**

- **Dialed telephone number**
  This is shown when dialing the telephone number.
  A display example: **91234567890**

- **Number or name of the caller**
  These are shown if the Caller ID feature is available.
  Display examples: **CO 03: 1234567890**
  **CO 03: Panasonic**

- **CO Line number**
  This is shown when receiving a CO call.
  A display example: **CO 03**

- **Call duration**
  This is shown during an established CO call. The display remains for five seconds after the call is finished.
  A display example: **CO 02 0:02'28**

Conditions
- Extension numbers and names are programmable. If no extension name is stored, only the extension number is displayed.
- The display shows no intercom call duration.
- The outgoing CO call duration starts when the programmable timer expires.

3 Features

Display, Extension Programmed Data

Description

Allows the display proprietary telephone user to confirm the features assigned on the buttons on the telephone. When it is on-hook (that is, when the handset is on the cradle and the SP-PHONE button is off), pressing a button displays the use of the button or the information assigned to the button for five seconds.

Conditions

- Display examples
  1. If REDIAL: SAVE: or One-Touch Dialing button is pressed, the stored number is displayed below:

     950-1001PP12345&

  2. If the DSS or MESSAGE button is pressed, the extension number and the name (if assigned) stored under the DSS button or the source of the Message Waiting is displayed:

     123: Tony

  3. If Account button is pressed, the display shows:

     Account

  4. If FWD/DND button is pressed, the selected feature assigned on the button is shown as follows:

     a. If the Do Not Disturb feature is assigned:

     Do Not Disturb

     b. If Call Forwarding- All Calls to extension 123 is assigned:

     FWD(All) Ext123

     c. If Call Forwarding – Busy to extension 234 is assigned:

     FWD(BSY) Ext234

     d. If Call Forwarding – No Answer to extension 345 is assigned:

     FWD(NA) Ext345

     e. If Call Forwarding – Busy / No Answer to extension 100 is assigned:

     FWD(B/NA) Ext100

     f. If Call Forwarding – To CO Line number 91201431 is assigned:

     FWD(CO) 91201431

- If the display characters exceed 16 digits, the mark “&” is shown at the right-hand edge.
- This is used to display the data programmed for each PF (Programmable Feature), DSS, SAVE, or REDIAL button. If Full-One Touch Dialing is enabled on the telephone Full-One Touch Dialing will be active instead.
Display, Self-Extension Number

Description
Allows the display proprietary telephone user to display their own jack number and extension number in Station Programming mode.

Conditions
Display example
If the jack number is 02 and the extension number is 102:

```
Jack02<>EXT102
```

Feature References
None

Operation References
Not applicable.

Display, Time and Date

Description
Offers the display proprietary telephone user a display of either the present time and the date or the date and the day of the week. It is displayed while on-hook.

Conditions
- There are two types of display:
  - Display example 1: Month, Day, Time
    
    Jan 1 12:00AM
  
  - Display example 2: Month, Day, Year, Day of the Week
    
    Jan 1, 1993 FRI

- The present date and time are set by System Programming.

Programming References
- Section 4, System Programming,
  [000] Date and Time Set
3 Features

Display Contrast Adjustment

Description
Allows the display proprietary telephone user to adjust the display contrast.

Conditions
The adjusting method depends on the type of proprietary telephones (PT). For a digital PT, Soft buttons and Volume button are used to sharpen the contrast to one of three levels. For an analog PT, a sliding lever on the telephone (CONTRAST selector) is used to select from three available levels.

Programming References

Feature References None

Operation References Appendix

Display Examples

Do Not Disturb (DND)

Description
Allows an extension user to appear busy to incoming CO or extension calls. This can be set or cancelled by the extension user.

Conditions
• If your proprietary telephone (PT) is not supplied with the FWD/DND button, it can be assigned on a flexible button.
• DND does not work for the following calls: doorphone calls; recalls for hold / Timed Reminder alarm or calls directed by Intercept Routing.
• Setting DND cancels any Call Forwarding feature currently set.
• A PT user in DND mode can answer a call by pressing the button showing the arrival of the call.
• An extension in DND mode can be called by other extension users who are allowed to override DND in their Class of Service (Do Not Disturb Override).

Do Not Disturb (DND)

Do Not Disturb (DND) Override

Description
Permits the pre-assigned extension user to call another user who sets the Do Not Disturb feature. Dialing “1” enables the caller to override the DND programmed on the called extension’s telephone and causes the telephone to ring.

Conditions
Class of Service (COS) programming determines the extension users who can perform DND Override.

Do Not Disturb (DND) Override

Door Opener

Description
Allows the extension users to unlock the door for a visitor from their telephones. The door can be unlocked by extension users who have been programmed to receive doorphone calls. However, while engaged on a doorphone call, any extension user can open the door from the telephone to let the visitor in.
3 Features

Conditions
It is needed to install a user-supplied door opener on each door to be opened. Two door openers can be installed on each system. System Connection* provides for four door openers.

Connection References

Doorphone Call

Doorphone Call

Description
Your system supports two doorphones. If a visitor presses the doorphone button, pre-assigned extensions are rung. The extension who answers the call can talk to the visitor. It is possible for any extension user to originate a call to a doorphone.

Conditions
- It is needed to install a Doorphone Card and a Doorphone. These are options.
- Two doorphones can be installed on each system. System Connection* provides for four doorphones.
- It is necessary to program the extensions that can receive calls from each doorphone during day and night mode.
- If no extension user answers an incoming doorphone call within 30 seconds, the call stops ringing and is cancelled.
- While engaged on a doorphone call, any extension user can open the door from the telephone to let the visitor in (Door Opener). This requires a user-supplied door opener.
- If the doorphone call is placed on hold, the Music on Hold is not available.

Connection References
Section 2, Installation
2.4.8 Doorphone and Door Opener Connection

*: Available for KX-TD1232 only.
Description

The Direct Station Selection (DSS) Console provides direct access to stations and busy lamp display as well as providing 16 PF (Programmable Feature) buttons.

The DSS Console must be programmed to work with a proprietary telephone (PT). System Programming assigns the jack numbers of the DSS Console and its associated PT.

Up to four consoles can be installed per system. A PT can be paired with up to four DSS Consoles. The paired telephone user can carry out the following operations using the DSS Console:

- Direct access to an extension (Direct Station Selection)
- Quick access to an outside party (One-Touch Dialing)
- Easy transfer of a CO call to an extension (The programmable One-Touch Transfer feature provides simplified operation.)
- Quick access to a system feature

The above functions are enabled simply by pressing buttons on the console which were pre-programmed as function buttons.

A DSS Console has two types of buttons as shown on the following page:
**DSS (Direct Station Selection) buttons:** Used to access extensions. Every button is programmed to correspond to an extension. Pressing a button allows the user to call the corresponding extension. Every button is provided with an indicator (Busy Lamp Field), which shows the current state of the corresponding extension as shown in the Table below:

<table>
<thead>
<tr>
<th>Light</th>
<th>State of extension</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Idle</td>
</tr>
<tr>
<td>On</td>
<td>Busy</td>
</tr>
</tbody>
</table>

**Busy Lamp Field Table**

To meet the user’s various needs, DSS buttons can be changed to the other function buttons.

**PF (Programmable Feature) buttons printed as F1 through F16:** These buttons are provided with no default setting. The paired telephone user can program the buttons for the other function buttons.
Conditions

- Programming the DSS and PF buttons can be done only from the paired telephone using Station Programming or Programming with Personal Computer. System Programming with Proprietary Telephone is not available.
- If the extension number assigned to a DSS button is changed to another number, the DSS button automatically follows the new number. (Reprogramming is not necessary.)
- During System Connection, DSS Consoles must be paired with telephones in the same system.

Electronic Station Lockout

Description

Allows the extension users to lock their stations so that other users cannot make outgoing CO calls. Any 3-digit numeric code can be used to lock the station. The same code is used to unlock it.

Conditions

- Making intercom calls and receiving intercom or CO calls are permitted on the locked station.
- Remote Station Lock Control overrides Electronic Station Lockout. If Operator 1 sets Remote Station Lock on a station that has already been locked by the station user, the user cannot unlock it.
- It is programmable to admit the press of the FLASH button during a CO call on the locked station.

Programming References

Section 4, System Programming,
[100] Flexible Numbering. Electronic station lockout set / cancel

*: Available for KX-TD1232 only.
3 Features

Emergency Call

Description
Allows the extension user to dial out a pre-assigned emergency number (911) after seizing the CO line.

Conditions
- Emergency number is allowed to call even in the following cases:
  - in Account Code - Verified (All Calls, Toll Restriction Override) mode
  - in any toll restriction levels
  - in Electronic Station Lockout
- The ARS feature is not available for the emergency call.

Feature References
None

Operation Reference
DPT Features, SLT Features:
Emergency Call

End-to-End DTMF Signaling (Tone Through)

Description
DTMF signaling is required for access to special network services offered by some telephone companies. This system allows the proprietary telephone user to send DTMF signals to the line during an established call.

Conditions
- If the dial type of the line is assigned to DTMF, Tone Through mode is established automatically after the dialing sequence is finished and the call is established.
- If the dial type of the line is assigned to dial pulse, Tone Through mode is established after the dialing sequence is finished and the "* #" buttons are pressed (Pulse to Tone Conversion).
- This function also applies to extension and conference calls.

Programming References
No programming required.
Executive Busy Override – CO Line

Description
Allows a proprietary telephone user to barge into an existing CO call, either between two outside parties or between an outside and an inside party, so as to establish a three-party conference call. It is possible for extension users to prevent this function from being executed by another extension user (Executive Busy Override Deny).

Conditions
- Class of Service programming determines the extension users who can perform Executive Busy Override and Executive Busy Override Deny.
- The pre-assigned extension users can barge in any CO line even if access to the line is not allowed by System Programming.
- This feature does not work if the extension has set Executive Busy Override Deny or Data Line Security.
- When a two-party call is changed to a three-party call and vice versa, a confirmation tone is sent to all three parties. This tone can be eliminated by System Programming.

Executive Busy Override — Extension

Extension Group

Description
The system supports eight extension groups. Any member of an extension group can pick up a call directed to another group member (Group Call Pickup). In addition, there are Paging – Group and Station Hunting features.

Conditions
- Every extension should belong to an extension group but cannot belong to more than one group.
- If System Connection* is employed an extension group can include extensions on both systems.

*: Available for KX-TD1232 only
External Feature Access

Description Allows the extension user to have access to the features of a host PBX, Centrex or Central Office, such as Call Waiting, etc. This is performed by putting the current party on hold and sending a flash signal.

Conditions
- This feature is effective only during a CO call. However if FLASH feature (Disconnection signal) is enabled by System Programming, this feature does not work.
- The flash time must be assigned as required by the Centrex, host PBX or CO line.
- With a proprietary telephone, the FLASH button or the feature number is used to perform this function. With a single line telephone, the feature number cannot be used when the user already has a Consultation Hold.
- During CO calls, a FLASH stored in System Speed Dialing, Station Speed Dialing, One-Touch Dialing or Call Forwarding – to CO Line functions as External Feature Access, not as Flash.

External Feature Access

Not applicable.
3 Features

Extra Device Port (XDP)

Description
EXtra Device Port (XDP) expands the number of telephones available in the system by allowing an extension jack to contain two telephones. A digital proprietary telephone (DPT) and a single line telephone (SLT) can be connected to the same jack but have different extension numbers so that they can act as completely different extensions.

Conditions
• XDP requires previous programming of the individual jack. Enable XDP mode for the desired jack by System Programming. Immediately after changing the assignment, changed setting may not work for a maximum of eight seconds.
• If an analog proprietary telephone (APT) and SLT are connected to an XDP-enabled jack, neither telephones work.
• If XDP is disabled for the jack, DPT and SLT may be used as Paralleled Telephones. APT and SLT also can be used as Paralleled Telephones.

Not applicable.

Flash

Description
The FLASH button is used to allow a proprietary telephone user to disconnect from the current call and originate another call without hanging up first.

Conditions
• If External Feature Access is enabled by System Programming, this function does not work for a CO call.
• Pressing the FLASH button re-starts the conversation duration, outputs an SMDR record, inserts the automatic pause, and checks toll restriction level again.
• It is required to enable this function at the locked extension and toll-restricted extension by System Programming.

Flexible Numbering

Description
The numbers used for the access codes of system features and the number used for extension numbers are not fixed. They can be set as required provided there are not any conflicts. Feature numbers can be from one to three digits, utilizing numbers “0 through 9” as well as “*” and “#.” Extension numbers can be two to four digits in length. Any number can be set as the leading first or second digit. If one digit is assigned as the leading digit, some extensions have 2-digit numbers and some have 3-digit numbers. If two digits are assigned as the leading digits, some have 3-digit numbers and some have 4-digit numbers.

*: Available for KX-TD1232 only.

### Conditions

- Flexible feature numbers can only be dialed during dial tone.
- The following are examples of feature number conflicts:
  Examples: 1 and 11, 0 and 00, 2 and 21, 10 and 101, 32 and 321, etc.
- Some flexible feature numbers require additional digits to make the feature active. For example, to set Call Waiting, the feature number for “Call Waiting” must be followed by “1” and to cancel it, the same feature number should be followed by “0.”

Floating Station

Description
You can assign virtual extension numbers for resources to make them appear to be extensions. These numbers are defined as floating numbers (FN). The following resources can have floating numbers:

1. External paging instruments: used for TAFAS feature.
   - For KX-TD816, one FN is available. For KX-TD1232, four FNs are available.
   - These FNs can be assigned as:
     a) DIL 1:1 destination
     b) DISA destination*
     c) Intercept Routing destination

2. DISA messages: used for DISA feature. Two FNs are available.
   - These FNs can be assigned as:
     a) DIL 1:1 destination
     b) Intercept Routing destination

3. Modem: used for system administration. One FN is available.
   - This can be assigned as:
     a) DIL 1:1 destination
     b) DISA destination can also be used as an extension number to call the modem.

Conditions
Floating numbers cannot be used for setting a feature such as Call Forwarding, etc.

*: Available for KX-TD1232 only.
Full One-Touch Dialing

Description
Allows the proprietary telephone user to make a call or have access to a system service with one button. There is no need to turn the SP-PHONE / MONITOR button on before pressing the button, which is required for One-Touch Dialing. Handsfree operation is automatically provided by pressing a One-Touch Dialing button, a DSS button, a REDIAL button or a SAVE button.

Conditions
- It is necessary to program automatic handsfree dial mode.
- This feature is also available with DSS buttons on a DSS Console.
- This feature is also available with the large display operation of KX-T7235 (Special Features for KX-T7235).

Special Features for KX-T7235

Handset / Headset Selection

Description
The system supports the use of headsets on proprietary telephones.

Conditions
- The headset is an option.
- To set headset mode on a digital proprietary telephone (PT), use Station Programming. To set headset mode on an analog PT, use the handset / headset selector provided on the set and / or on the headset.

Connection References
Please refer to the Operating Instructions for the Headset, KX-T7090 or KX-T30890.

Programming References
Station Programming ............................................................... User Manual.
Handset/Headset Selection
Handsfree Answerback

Description
Allows the speakerphone telephone user to talk to a caller without lifting the handset, if the user has set handsfree answerback mode. If the user receives an intercom call in this mode, handsfree conversation is established immediately after the user hears beep tone and the caller hears confirmation tone.

Conditions
- Handsfree answerback mode is set or cancelled by pressing the AUTO ANSWER button.
- This feature does not work for calls from outside parties or doorphone calls.
- Handsfree Answerback set on a telephone overrides the Ring / Voice Intercom Alerting mode preset on the telephone; Handsfree conversation mode is established as soon as confirmation tone is sent.

Programming Reference
No programming required.

Handsfree Operation

Description
Allows the proprietary telephone user to dial and to talk to the other party without lifting the handset. Pressing an appropriate button provides handsfree mode.

Conditions
- This function can be utilized by pressing a button listed below when the SP-PHONE / MONITOR button indicator is off: SP-PHONE button; MONITOR button; INTERCOM button; CO button
- The KX-T7050 and the KX-T7250 can be used for handsfree dialing operations, etc., but cannot be used for handsfree conversation.
Features

- A single press of a One-Touch Button, DSS button, REDIAL button or a SAVE button also provides handsfree mode if Full One-Touch Dialing is enabled.

Programming References
No programming required.

Feature References

Handsfree Operation

Hold Recall

Description
Prevents a call on hold from being kept waiting longer than a predetermined time. If the timer expires, ringing or an alarm tone is generated as a reminder to the user who held the call. If the user is on-hook and its speaker-phone is off, the phone is rung. If the user is off hook or in speakerphone mode when the timer expires an alarm tone is sent from the built-in speaker of a proprietary telephone (PT) or from the handset receiver of a single line telephone at 15-second intervals.

Conditions
- Hold Recall can be disabled by programming.
- The display PT flashes the indication of the held party for five seconds at 15-second intervals synchronized with the tone.
- Alarm tone is sent as follows:

```
\[ \begin{array}{ccccccccccc}
\hline
\text{Hold Recall Time} \\
\text{Conditions} \\
\text{Programming References} \\
\text{Feature References} \\
\text{Operation References} \\
\end{array} \]
```
Host PBX Access

Description

The system may be installed behind an existing host PBX. This is performed by connecting a line from the host to a CO line in the Digital Super Hybrid System.

Conditions

- To enable Host PBX Access, put the host PBX line in a CO line group. The user accesses the host PBX by selecting that CO line.
- A Host PBX Access Code is required to access CO lines of the host PBX.
- A pause, if programmed, can be inserted between the user-dialed Host PBX Access Code and the following digits (Automatic Pause Insertion). Program the pause time required by the Host PBX for that CO line group.
- Access to the host PBX during a conversation is also possible (External Feature Access).

Intercept Routing

Description

Provides automatic redirection of incoming CO calls. There are two types of Intercept Routing. In the first case a call cannot be placed on the called party. This is called Rerouting. In the second case the call is not answered within a programmed time period. This is called Intercept Routing – No Answer (IRNA).

Conditions

- Intercept Routing applies to DIL 1:1, DIL 1:N, DISA*, TAFAS, Call Forwarding, and Station Hunting.
- The final destination of intercepted calls must be programmed for day and for night modes. There are three possible destinations:
  1) an extension
  2) an external pager
  3) a DISA outgoing message*

*: Available for KX-TD1232 only.
• If the destination is in Do Not Disturb, Do Not Disturb does not function and the call is placed there.

Intercom Calling

Description
Allows the extension user to call another extension user within the system.

Conditions
• Extension numbers are assigned to all extensions by System Programming. An extension number is programmed to be two, three, or four digits.
• Names can be given to extension numbers by System Programming. An extension number and a name, if programmed, is shown on the display PT during an intercom call.
• DSS buttons permit one-touch access to an extension and provide Busy Lamp Field.
• KX-T7235 user can make an extension call with an extension dialing directory on the display.
• After dialing an extension number, the user will hear one of the following:
  Ringback tone: indicates that the other extension is being called.
  Confirmation tone: indicates that the user can perform Voice Calling.
  Busy tone: indicates that the other extension is busy.
  Do Not Disturb tone: indicates that the other extension has DND assigned.

Limited Call Duration

Description
Limited Call Duration is a system programmable feature that disconnects a CO call when a specified timer expires. A warning tone is sent to the extension user 15 seconds, 10 seconds, and 5 seconds before the time-limit. Limiting the call duration can be enabled or disabled by Class of Service (COS) for each extension.

Conditions
- Any CO call except CO-to-CO call is limited by this feature. For CO-to-CO calls, CO-to-CO Call Duration is activated.
- It is programmable to select the limited call, either incoming and outgoing call or outgoing call only.

Programming References

Line Access, Automatic

Description
Allows the extension user to dial the automatic line access number and access an idle line from the CO line groups assigned for the extension. The proprietary telephone user can use the Loop-CO button in place of the access number.

Conditions
- This feature functions with Automatic Route Selection (ARS), if ARS is enabled. If so, the least expensive route is automatically selected.
- Each extension is subject to System Programming items for CO lines available to access.
- An idle CO line is selected from the CO line groups assigned to the station. If one CO line group is available, an idle line is selected from that group. If multiple CO line groups are available, the CO line group hunting sequence is determined by System Programming.
- This feature requires a CO button (G-CO, L-CO or S-CO) assignment on a proprietary telephone (PT). Dialing the line access code selects a
CO button on a PT according to the priority:

S-CO > G-CO > L-CO on a hunted CO line group

- If Idle Line Preference - Outgoing is set on the telephone, the user can access an idle line only by going off-hook.
- The system waits for a programmed time before dialing after a CO line is seized.

Line Access, CO Line Group

Description

Allows the extension user to dial access a CO line group. An idle line is selected from the CO line group. To specify a CO line group, dial the feature number (the default setting is “8”) and a desired CO line group number (1 through 8). A proprietary telephone user can also specify a CO line group by pressing a Group-CO button.

Conditions

- Each extension is subject to System Programming items for CO lines available to access.
- An idle line is selected in sequence from the lines in the specified CO line group.
- Group-CO buttons must be programmed prior to use.
- If Idle Line Preference - Outgoing is set on the telephone, the user can access an idle line only by going off-hook.

Line Access, Direct

Description
Allows the proprietary telephone user to select a CO line by pressing an idle CO button, which automatically establishes handsfree operation mode and allows the user to perform On Hook Dialing. The user need not press the SP-PHONE button, MONITOR button nor lift the handset.

Conditions
• There are three types of CO buttons which can be programmed on an extension: Single-CO button, Group-CO button, and Loop-CO button.
• Each extension is subject to System Programming items for CO lines available to access.

Line Preference – Incoming (No Line / Prime Line / Ringing Line)

Description
A proprietary telephone user can select the method used to answer incoming calls from the following three line preferences:

1. No Line Preference
   No line is selected when you go off-hook. You must select a line to answer.

2. Prime Line Preference
   You can assign a prime line beforehand and answer a call on that line, when multiple calls are received simultaneously.

3. Ringing Line Preference
   When you go off-hook, you answer the call ringing at your telephone.
### Features

#### Conditions
- Setting a new line preference feature cancels the previous setting.
- If Prime Line Preference is selected and an incoming call arrives from a line other than the prime line, it cannot be answered just by going off-hook. The Prime Line should be assigned to the Single CO button.
- If Ringing Line Preference is selected, going off-hook does not answer a line programmed for “no ring” even though there is an incoming call. Going off-hook during the delay time does not answer a line programmed for “delayed ringing.”
- A single line telephone is always set to Ringing Line Preference and cannot be changed.

#### Programming References
- Station Programming
- Preferred Line Assignment – Incoming

#### Feature References
- None

#### Operation References

- Receiving Calls

### Line Preference – Outgoing (Idle Line / No Line / Prime Line)

#### Description
A proprietary telephone user can select a desired outgoing line preference to originate calls from the following three line preferences:

1. **Idle Line Preference:**
   - When you go off-hook, you are connected to an idle line.
   - An idle line is automatically selected from the pre-assigned lines.

2. **No Line Preference:**
   - No line is selected when you go off-hook. You must select a line to make a call.

3. **Prime Line Preference:**
   - When you go off-hook, you are connected to the pre-assigned line. Assign a line as your prime line beforehand.

#### Conditions
- Setting a new line preference feature cancels the previous setting.
- To set Prime Line Preference, one prime line is selected from intercom or CO lines.
- The CO lines used by users must be connected by programming.
- To select Idle Line Preference, CO lines available for the user should be programmed. Also CO lines available for Automatic Line Access should be assigned.
• The user can override the Idle / Prime Line Preference temporarily to select a specific line. To select it, press the desired line access button (INTERCOM or CO button) before going off-hook or pressing the SP-PHONE / MONITOR button; or if Full One-Touch Dialing is enabled, press One-Touch Dialing, DSS, REDIAL, or SAVE button.

Making Calls

Lockout

Description  If one party in a conversation goes on-hook, they are both disconnected from the speech path automatically. This feature applies to extension and CO calls. Reorder tone is sent to the off-hook party before it is disconnected.

Conditions  In the case of a single line telephone (SLT), if nothing is dialed within a certain period of time after the other party goes on-hook, reorder tone is sent to the SLT and then it is disconnected from the speech path.

Programming References  No programming required.

Feature References  None

Operation References  DPT Features, SLT Features;

Lockout
Manager Extension

Description
One extension in the system can be assigned as the system manager. This extension can perform System Programming.

Conditions
- Besides the manager extension, the extension that is connected to the jack 1 is able to perform System Programming.
- If eXtra Device Port mode is enabled at the manager extension, the proprietary telephone user is regarded as the manager.

Programming References
Section 4, System Programming,

Operation References
Not applicable.

Message Waiting

Description
The system supports the ability to inform the called party of a message waiting. The user, with a MESSAGE button, knows there is a message if the LED of the MESSAGE button is lit red. If the button is not provided nor assigned, the called party hears special dial tone, when he / she goes off-hook. Pressing the lit MESSAGE button also means to call back the called party or listen to the messages which are stored in the mailbox of the Voice Processing System.

Conditions
- For the proprietary telephone which is provided with no MESSAGE button, a flexible CO button can be assigned as the MESSAGE button either by System or Station Programming.
- Cancellation of the message can be performed from the extension setting it or from the extension receiving it.
- The system supports a maximum of 128 simultaneous messages.
- Messages are always left on the original extension. It is not sent to a Call Forwarding or Station Hunting destination.

**Microphone Mute**

**Description**
Allows the proprietary telephone user to turn off the microphone, for privacy reasons.

**Conditions**
- This is effective for the microphone only; your voice will only be muted during a handsfree conversation.
- The user can hear the other party's voice during Microphone Mute.

**Programming References**
No programming required.

**Feature References**
None

**Operation References**

  - DPT Features, Message Waiting
  - Microphone Mute

**Mixed Station Capacities**

**Description**
This system supports a wide range of telephone sets, not only Digital Proprietary Telephone (DPT) and Analog Proprietary Telephones (APT) in the Digital Super Hybrid System, but also single line rotary telephones (10 pps / 20 pps, employing dial pulse signals) and single line push-button dialing telephones (touch tone). The super hybrid method used in this system allows any telephone to be connected to an extension modular jack without an adaptor.

**Conditions**
If a telephone is replaced by another one, the stored data (such as feature button storage) is held for the new one.

**Connection References**
Section 2, Installation,
- 2.3.3 Extension Connection
- 2.4.3 8-Station Line Unit Connection
Module Expansion

Description
The KX-TD816 starts with 4 CO line and 8 extension jacks. The KX-TD1232 starts with 8 CO line and 16 extension jacks. They can be expanded by installing expansion units.
- A 4-CO Line Unit adds 4 CO line jacks.
- A 8-Station Line Unit adds 8 extension jacks.
The KX-TD816 can have one 4-CO Line Unit and one 8-Station Line Unit. The KX-TD1232 can have one 4-CO Line Unit and a maximum of two 8-Station Line Units. Thus the KX-TD816 can have 4 or 8 CO line jacks and 8 or 16 extension jacks, and the KX-TD1232 can have 8 or 12 CO line jacks and 16, 24 or 32 extension jacks.

Conditions
- The number of extension jacks may be different from the number of telephones if the Paralleled Telephone or the eXtra Device Port feature is enabled. These features allow one extension jack to have two telephones.
- When an expansion unit is installed, the unit identification is set by System Programming.

Music on Hold

Description
While a party is on hold, music is automatically sent.

Conditions
- Operations such as Call Hold, Exclusive Call Hold, Consultation Hold, or Call Transfer generates Music on Hold.
- It is necessary to connect a user-supplied external music source such as a radio to the system. Up to two external music sources for KX-TD1232, and one external music source for KX-TD816 can be connected per system. It is required to select the internal or external music source by System Programming.
- The music source is used for Music on Hold and/or BGM. In the case of KX-TD1232, if external music sources are in use, you can select a music source for each usage.

Night Service

Description
This supports both Night and Day modes of operation. The system operation for originating and receiving calls can be different for day and night modes. The system operation for restricting toll calls can be arranged separately to prevent unauthorized toll calls at night.

Switching of the Day / Night Mode
Day / Night mode can be switched either automatically at a pre-assigned time or manually by Operator 1 at any time desired.

Automatic Night Service: If you select automatic switching mode, your system will switch the Day / Night mode at the programmed time each day. The starting time of the Day / Night mode can be set for each day.
Features

3 Manual Night Service: If you select manual switching mode, Operator 1 can switch the Day / Night mode by dialing the feature number.

Conditions

The following programming items may be assigned in a different way between day mode and night mode:

- [407]-[408] DIL 1:1 Extension — Day / Night
- [109]-[110] Intercept Extension — Day / Night
- [500]-[501] Toll Restriction Level — Day / Night
- [603]-[604] DIL 1:N Extension and Delayed Ringing — Day / Night
- [605]-[606] Outgoing Permitted CO Line Assignment — Day / Night
- [607]-[608] Doorphone Ringing Assignment — Day / Night

Off-Hook Call Announcement (OHCA)

Description

OHCA allows you to inform a busy extension that another call is waiting by talking through the built-in speaker of the called party’s proprietary telephone. If the existing call is using the handset, the second conversation is made with the speakerphone so that the called party can talk to two parties independently. OHCA is performed the same way as Busy Station Signaling (BSS). It depends on the telephone type used by the called party whether BSS or OHCA is activated by the operation. If the called telephone is one of the following, OHCA becomes active: for KX-TD816: KX-T7235, for KX-TD1232: T7130, KX-T7235.

Conditions

This feature is only effective if the called extension has set the Call Waiting. If this is not set, the caller will hear reorder tone.
One-Touch Dialing

Description
One-Touch Dialing offers the proprietary telephone (PT) user one-touch access to a desired party or system feature. This is enabled by storing an extension number, a telephone number or a feature number of up to 16-digits on a One-Touch Dialing button. The number of buttons available depends on the type of PT. One-Touch Dialing buttons can be programmed to flexible buttons: CO, DSS or PF (Programmable Feature).

Conditions
- It is possible to store an account code into a One-Touch Dialing button.
- Speed Dialing, One-Touch Dialing, manual dialing, Last Number Redial and Saved Number Redial can be used together.
- It is possible to store a number consisting of 17 digits or more by dividing it and storing it in two One-Touch Dialing buttons. In this case, a line access code should not be stored on the second button.
- If the Full One-Touch Dialing is enabled, there is no need to go off-hook, before pressing the One-Touch Button.

---

**One-Touch Transfer by DSS Button**

**Description**

This feature, if programmed, allows the DSS Console and the proprietary telephone user to hold a CO call and quickly transfer it to an extension. While talking to an outside party, pressing a DSS button on the console or the proprietary telephone provides automatic hold and transfer. There is no need to press the TRANSFER button. The extension starts ringing immediately.

**Conditions**

- One-Touch Transfer cannot be performed when there is another call on Consultation Hold.
- If One-Touch Transfer mode is disabled, the user transfers a CO call by pressing the TRANSFER button followed by the DSS button.

**Programming References**

Section 4, System Programming,

**Operator**

**Description**

The system supports up to two operators. Any extension can be appointed as an operator. The extension assigned as Operator 1 has the ability to perform the following operations:

- Switching Day / Night mode manually
- Setting / clearing station lockout remotely
3 Features

- Turning Background Music – External on and off
- Recording and playing outgoing messages

Conditions

- If eXtra Device Port mode is enabled at the operator’s extension, the proprietary telephone user is regarded as the operator.
- The operator can be assigned as a destination of the Transfer Recall by System Programming.

Operator Call

Outgoing Message (OGM)*

Description

Allows the extension assigned as Operator 1 to record outgoing voice messages. There are two types of outgoing messages that can be recorded:

*: Available for KX-TD1232 only.
Features

**DISA message:**
This message is played when a caller accesses the DISA feature. There can be two different DISA messages.

**Timed Reminder message:**
This message is used in Timed Reminder. When answering the Timed Reminder alarm (often used as wake-up call), the user will hear this message. There can be only one Timed Reminder message.

After recording these messages, Operator 1 can also play them back for confirmation.

**Conditions**

- Outgoing messages are numbered as follows:
  - OGM 1 specifies DISA message 1
  - OGM 2 specifies DISA message 2
  - OGM 3 specifies Timed Reminder message
- A DISA Card is required to program the OGM. One card can be installed per system. System Connection permits two DISA Cards. If there are two DISA Cards, the same message is recorded for both simultaneously.

**PAGING FEATURES – SUMMARY**

**Description**
Paging allows you to make a voice announcement to multiple persons at the same time. Your message is announced over the built-in speakers of proprietary telephones and / or external speakers (external pagers). The paged person can answer your page from a nearby telephone. Making and answering a page is
Paging features are classified as follows:

- **Paging - All**
- **Paging - External**
- **Paging - Group**

### Paging – All

**Description**

Allows you to make a voice announcement from the speakers of the proprietary telephones and from the external paging devices (external pagers). If one of the paged persons answers your page, you can talk to the person through the connected line.

**Conditions**

- If System Connection* is established, paging is performed to all proprietary telephones and all external paging devices in both systems.
- The confirmation tone is sent to extensions, when the page is made or answered. Eliminating the tone is programmable.
- The confirmation tone is sent from external pagers, before the voice announcement. Eliminating the tone is programmable.
- The ringing or busy extension cannot receive a page.

*: Available for KX-TD1232 only.
3 Features

Paging - External

Description
Allows you to make a voice announcement using external paging devices (external pagers). One pager for KX-TD816, and up to two pagers per system for KX-TD1232 can be contained. For KX-TD1232, it is possible to select one or two pagers to perform your paging. Any telephone user can answer your Paging - External.

Conditions
- Previous connection of an external pager is required.
- External pagers can be used for TAFAS, Paging - External, or Background Music (BGM) - External in this order. For example, if Paging - External is overridden by TAFAS, reorder tone is returned to the performer of the Paging - External. If BGM is overridden by another higher priority, it is interrupted and starts again when the higher priority is finished.
- If System Connection* is established, up to four pagers are available.
- The confirmation tone is sent to the extensions and external pager, when the paging is made or answered. Eliminating the tone is programmable.
- The confirmation tone is sent from external pagers before the voice announcement. Eliminating the tone is programmable.

Paralleled Telephone

Description
Any proprietary telephone can be connected in parallel with a single line telephone. The following two combinations of telephones are available:

(1) APT + SLT (an analog proprietary telephone and a single line telephone/device)
(2) DPT + SLT (a digital proprietary telephone and a single line telephone/device)

When a parallel connection is made, an extension user can make and answer a call using either telephone.

Conditions
- The proprietary telephone (PT) can be used to perform normal operations whether or not the SLT is enabled.
- In the SLT + DPT combination, if one telephone goes off-hook while the other telephone is on a call, the call is switched to the former.
- In the SLT + APT combination, if one telephone goes off-hook while the other telephone is on a call, a three-party call is established. If one
user goes on-hook, the other user continues the call.

- When receiving a call:
  The SLT is enabled; Both the PT and the SLT ring except when the PT is in Handsfree Answerback mode or Voice Alerting mode.
  The SLT is disabled; PT rings but the SLT does not ring. However, the SLT can answer the phone.
- When the SLT is in operation, the display and LED indicator on the paired PT will show in the same way as if the PT is in operation.
- If APT + SLT are used, the extension user cannot originate a call from the SLT if the APT is:
  - playing BGM
  - in programming mode
  - receiving a paging announcement over the built-in speaker.
- If eXtra Device Port feature is available, a DPT+ SLT can act as completely different extensions.
- Call Waiting tone can be heard only by PT.

Paralleled Telephone Connection

**Pause Insertion, Automatic**

**Description**
This function is used to insert a pre-assigned pause between the CO line access number, the host PBX, Centrex or carrier access code and the successively dialed digits.

**Conditions**
- This feature requires previous programming of CO line access number, host PBX, Centrex and special carrier access codes as well as assignment of the pause duration.
- This feature works for Speed Dialing, One-Touch Dialing, Last Number Redial, Saved Number Redial, Pickup Dialing, Call Forwarding – to CO Line as well as for ordinary calls.
- Pressing the PAUSE button in dialing number inserts a pause for a pre-assigned time.
Pickup Dialing

Description
Allows an extension user to make an outgoing call by going off-hook, if the user has previously stored the telephone number. This feature is also known as Hot Line.

Conditions
- A rotary dial telephone without the "#" button cannot program this feature. For programming the phone number, replace a rotary dial telephone to the telephone with the "#" button temporarily.
- The user uses a feature number to enable or disable pickup dialing.
- If the feature is enabled and the user goes off-hook, dial tone is generated for the waiting time and then dialing starts. During the waiting time the user can dial another party, overriding the Pickup Dialing function.
- If the user answers an incoming call or retrieves a call on hold, the Pickup Dialing feature does not work.
- If the proprietary telephone is provided with PF 12 button, the stored number of PF12 button is common to the one for Pickup Dialing.

Pickup Dialing (Hot Line)
3 Features

**Power Failure Restart**

**Description**
Turning back on the electricity, the system restarts the stored data automatically. Before restarting, the system records the error logs if necessary.

**Conditions**
- In the case of KX-TD1232, if System Connection is established, the Slave System makes a copy of the restored data of the Master system.
- In the event of a power failure, system memory is protected by the factory-provided lithium battery. There is no memory loss except the memories of Camp-On and Call Park.

**Programming References**
No programming required.

**Feature References**
None

**Operation References**
Not applicable.

**Power Failure Transfer**

**Description**
If a power failure should happen, or during a system-off-line state, specific extension telephone instruments are automatically connected straight to specific CO lines. This provides CO line conversations between the following extensions and CO lines:

- **KX-TD816:**
  - CO 1 is connected to extension jack number 1
  - CO 2 is connected to extension jack number 2
  - CO 5 is connected to extension jack number 9
  - CO 6 is connected to extension jack number 10

- **KX-TD1232:**
  - CO 1 is connected to extension jack number 1
  - CO 2 is connected to extension jack number 2
  - CO 3 is connected to extension jack number 9
  - CO 4 is connected to extension jack number 10
  - CO 9 is connected to extension jack number 17
  - CO 10 is connected to extension jack number 18

Single line telephones can work in case of a power failure. Connect these telephone instruments to the above extension jacks.

**Conditions**
- All the other conversations except for the above combinations are disconnected during a power failure.
- Only CO line conversations can operate. All the other features do not work.

Power Failure Restart

Operation References
Not applicable.

Privacy, Automatic

Description
By default all conversations established on CO lines, extension lines and doorphone lines have privacy enabled.

Conditions
Automatic privacy may be temporarily released for a three-party conference, which is established either by Executive Busy Override or Privacy Release.

Programming References
No programming required.

Feature References
Section 3, Features,
Executive Busy Override – CO Line
Executive Busy Override – Extension
Privacy Release

Operation References
Not applicable.

Privacy Release

Description
Allows the proprietary telephone user to release Automatic Privacy for an existing call in order to establish a three-party call. During a conversation with an outside party on a CO button, the user can allow another extension party to join the conversation by pressing the CO button.
Conditions
When a two-party call is changed to a three-party call and vice versa, a confirmation tone is sent to all three parties. Eliminating the tone is programmable.

Pulse to Tone Conversion
Description
This feature allows the extension user to change from pulse dial to tone (DTMF) dial so that the user can access special services such as computer-accessed long distance call.

Conditions
- This feature works only on CO lines set to Pulse Dialing mode or Call Blocking mode.
- Dial Type Selection provides selection of a dial mode for each CO line.
- This feature is unavailable to DISA* callers.
- Changing tone to pulse is not possible.

Redial, Automatic
Description
This is a special feature for the proprietary telephones, that provides automatic redialing of the last dialed, saved number or call log, if the called party is busy. If the Last Number Redial, Saved Number Redial or Call Log operation is performed handsfree, the telephone set will hang up and try again after a pre-determined period of time.

*: Available for KX-TD1232 only.
Conditions

- Redial Repeat Time and Interval Time can be changed by System Programming.
- Pressing FLASH allows the system to cancel this feature.
- If any dialing operation is done during Automatic Redial, this function is finished.
- This feature is not available with KX-T7055 or KX-T7250.

DPT Features,
Redial, Automatic

Redial, Last Number

Description

Every telephone in the system automatically saves the last telephone number dialed to a CO line and allows the extension user to dial the same number again.

Conditions

- With a proprietary telephone, REDIAL button is used to carry out Last Number Redial. With a single line telephone, the feature number is used.
- The memorized telephone number is replaced by a new one if at least one digit to be sent to a CO line is dialed. Dialing a CO line access code alone does not change the memorized number.
- Certain type of proprietary telephones allows multiple redialing automatically (Automatic Redial).

3 Features

Redial, Saved Number

Description
Allows the proprietary telephone user to save a telephone number and redial the number afterwards. The user can store it while in conversation on a CO line. The saved number can be redialed many times until another one is stored.

Conditions
- Certain types of proprietary telephones (PT) allow automatic multiple redialing (Automatic Redial).
- If the SAVE button is not provided on your PT, it is possible to assign a flexible button to be the SAVE button.

Remote Station Lock Control

Description
Operator 1 is given the privilege of controlling Electronic Station Lockout on any station.

Conditions
Remote Station Lock Control is superior to Electronic Station Lockout. If Station Lockout has already been set by the extension user and Remote Station Lock is set by Operator 1, cancelling the lock is only possible by Operator 1.

Programming References
No programming required.

Feature References
Section 3, Features,
Electronic Station Lockout

Operation References
Operator Service Features,
Remote Station Lock Control
Reverse Circuit

Description
This feature can be used to detect a reversal of CO line polarity from Central Office, when trying to make a CO line call. This is useful for determining the start and completion of CO line calls.

Programming Reference
Section 4, System Programming,
[416] Reverse Circuit Assignment

Ringing, Delayed

Description
If Direct In Lines (DIL) 1:N is established, a telephone set is originally set to ring instantly. This setting can be changed to delayed ringing, no ringing or no incoming call (disable) on a CO line number basis.

Conditions
• This feature does not apply to DISA* or DIL 1:1 calls.
• If delayed, no ringing or no incoming call (disable) is assigned to an extension, the extension can answer an incoming call during no ring or the delay time by pressing the flashing button.

Direct In Lines (DIL)

Operation References
Not applicable.
3 Features

Ringing, Discriminating

Description
 Allows the extension user to identify the incoming call by the ringing pattern. (See Section 5.1 “Tone / Ring Tone.”)

Conditions

- When there are multiple incoming calls and the extension goes from off-hook to on-hook, the calls are rung according to the following priority:
  - <1> Consultation Hold Recall
  - <2> An incoming call from a line in which the Prime Line Preference - Incoming function has been set (with a proprietary telephone only)
  - <3> Call Waiting
  - <4> Incoming calls; Hold Recall; Transfer Recall; Unattended Conference Recall
- If multiple incoming calls arrive at an on-hook extension simultaneously, priority as to which calls should be rung is generally on a “first-come first-served” basis. In the case of proprietary telephones (PT), however, when the Prime Line Preference – Incoming function has been set, this line takes precedence.
- Incoming TAFAS calls can be identified by ringing signals sent out from external pager. The ringing pattern is the same as the CO calls.
- The digital PT user can select a desired tone frequency for each CO button.

Programming References
 No Programming required.

Feature References
 Section 3, Features, Ringing Tone Selection for CO Buttons

Operation References
 Not applicable.

Ringing Tone Selection for CO Buttons

Description
 Allows the digital proprietary telephone user to select the desired ringer frequency for each CO button. This provides discrimination of incoming CO calls.

Conditions
 There are eight ringer frequencies available. One of them can be assigned to a CO button that is assigned as each of the following buttons: Single-CO, Group-CO, or Loop-CO button. It is not possible to assign a ringer frequency to any other button.
Secret Dialing

Description
Allows an extension user to conceal all or a part of a registered telephone number that normally appears on the display during System Speed Dialing or One Touch Dialing. Numbers can be assigned to Programmable Feature buttons on PT and DSS Consoles. When a display telephone user makes a call to the telephone number that is set to Secret Dialing, all or part of the number does not appear on the display. Additionally, KX-T7235 Model telephones are capable of Secret Dialing for “Station Speed Dialing” numbers.

Conditions
- When storing a number, press the INTERCOM button at the beginning and the end of the number to be concealed.
- You can conceal one or more parts of a telephone number.
- The concealed part will be printed out by SMDR.

Programming References
No programming required.

Special Features for KX-T7235

The KX-T7235 is provided with a large display that allows the user to originate calls or to access system facilities with ease. The display prompts the user with information related to the desired feature. Examples of this special function are shown below:

**Call Log**
- Extension Dialing
- Station Speed Dialing
- System Feature Access Menu
- System Speed Dialing

**Call Log**

**Description**
Provides a display of the last dialed telephone numbers and allows the user to perform redialing the number by pressing the associated button.

**Conditions**
The oldest telephone number will be eliminated when over the limited numbers are dialed out.

**Programming References**
No programming required.

**Feature References**
None

**Operation References**
Special Display Features (— for KX-T7235),
Call Log

**Extension Dialing**

**Description**
Provides a display of extension names and numbers. The user can call an extension by pressing the associated function button.

**Conditions**
System Programming of extension numbers and names is required.

Station Speed Dialing

Description
A list of the names and telephone numbers stored for One-Touch Dialing is displayed allowing the user to make a one-touch call by name without having to know the number.

Conditions
• It is necessary to program One-Touch Dialing Numbers and Names into the 10 function buttons F1 through F10.
• It is programmable to select the first display, number or name.

System Feature Access Menu

Description
This feature provides a display of the system features available at any time and allows the user to have access to the desired features.

Conditions
• The features available to access are:
  Absent Message Capability
  Call Pickup, Group
  Call Forwarding (set / cancel)
  Do Not Disturb (set / cancel)
  Message Waiting
  Paging (access / answer)
  Paralleled Telephone
• In addition to the features above, the Operator 1 can have the display of the following features:
  Background Music (BGM) – External
  Call Park
  Night Service
  Outgoing Message*

* Available for KX-TD 1232 only.

System Speed Dialing

Description
A list of the names stored for System Speed Dialing is displayed. This allows the user to dial by name without having to know the telephone number. All the user needs to do is to press the button associated with the desired name.

Conditions
• The numbers and names for System Speed Dialing must be programmed.
• If a name is not stored for a number, it is not displayed and cannot be called with this feature.

Station Hunting

Description
If a called extension is busy, Station Hunting redirects the incoming call to an idle member of the extension group. Idle extensions are automatically hunted according to the programmed type. There are four hunting types available – Circular, Termination, Voice Mail (VM), and Automated Attendant (AA).

Circular hunting: The extensions are hunted until an idle one is found, regardless of jack number.

Termination hunting: The extensions are hunted until reaching the extension which has the highest jack number in the group.

VM hunting: All the VM ports are hunted until an idle one is found to permit VM Service.

AA hunting: All the AA ports are hunted until an idle one is found to permit AA Service.

One of the hunting types is selected for each extension group.
Station Message Detail Recording (SMDR)

Description
Station Message Detail Recording (SMDR) automatically records detailed call information for CO calls. A printer connected to the EIA (RS-232C) port can be used to print incoming and outgoing CO calls as well as print a hard copy of the System Programming. To print the call records, use the program [800] “SMDR Incoming/Outgoing Call Log Printout,” which allows you to print out the following records:
- Records of all outgoing CO calls or outgoing toll calls.
- Record of incoming CO calls.

An example of a printed call record:

<table>

</tr>
</tbody>
</table>
Example of SMDR printout format:

**Explanation**

(1) Date: shows the date of the call as Month / Day / Year.
(2) Time: shows the start time of a call as Hour:Minute / AM or PM.
(3) Ext: shows the extension number, floating number, etc. that engaged in a call.
(4) CO: shows the CO line number used for the call.
(5) Dial Number

**Outgoing call:** shows the other party's telephone number (maximum 30 digits). Valid digits are 0 through 9, *, #, P (if PAUSE button is pressed), or the mark “=” (if a host PBX access code is entered).

**Received call:** shows <INCOMING> and if a Caller ID is assigned to the other party also shows the name or number.

(6) Duration: shows the duration of the call as Hours / Minutes / Seconds.
(7) Acc Code (Account Code): shows the account code appended to the call.
(8) CD (Condition Code): shows call handling type with the following codes:

- TR: Transfer
- FW: Call Forwarding to CO Line
- *D0: Non Security CO Line Access using DISA
- *D1 through D4: DISA User Codes 1 through 4
- RM: Remote access to a modem

To print out the record of System Programming items that have been assigned, use the program [802] “System Data Printout.”

**Conditions**

- Connect a printer provided with an EIA (RS-232C) interface to the EIA (RS-232C) connector located on the main unit. After connecting a printer, do not press the RETURN key, if provided on the printer, for 10 seconds.
- When programmed for outgoing toll calls only, printing occurs only for calls which start with the numbers stored in any Denied Code Table from levels 2 to 6. If ARS is employed, not the user-dialed but modified number is checked against these tables.
- This system can store information on up to 100 calls. If more calls are originated or received, previous records are deleted starting from the oldest one.
- This data is not deleted when you reset the system.
- If the system clock is not set by System Programming or if the calendar IC is out of order, the date and time is not printed out.

*: Available for KX-TD1232 only.
3 Features

- If FLASH is manually sent out during a conversation, the call record is printed and a new record is started.

Station Programming

Description
Allows the proprietary telephone (PT) user to customize the extension to their needs. The following are the programming items available:

For the PT (KX-T7220; KX-T7230; KX-T7235; KX-T7250; KX-T7130; KX-T7020; KX-T7030; KX-T7050)
- Call Waiting Tone Type Assignment
- Flexible Button Assignment
- Full One-Touch Dialing Assignment
- Intercom Alerting Assignment
- Preferred Line Assignment – Incoming / Outgoing
- Station Programming Data Default Set

For digital PT (KX-T7220; KX-T7230; KX-T7235; KX-T7250) only,
- Handset / Headset Selection
- Ringing Tone Selection for CO Buttons

For display PT (KX-T7230; KX-T7235; KX-T7130; KX-T7030) only,
- Self-Extension Number Confirmation

For digital large display PT (KX-T7235) only,
- Station Speed Dialing Number / Name Assignment

For Operator 1 extension PT only,
- Remote Station Lock Control
Detailed information and programming instructions are described in the User Manual, Station Programming.

Conditions
During Station Programming, the PT is considered to be in busy status.

Station Speed Dialing

Description
Allows an extension user to store frequently dialed numbers in order to place a call with abbreviated dialing. It is performed by dialing the feature number and a speed dial number from 0 through 9. Up to 10 numbers can be stored for each telephone.

Conditions
- Station Speed Dialing can be followed by manual dialing to supplement the dialed digits.
- You may make a call with One-Touch Dialing button, instead of Station Speed Dialing.
- The single line telephone (SLT) may be replaced by a proprietary telephone (PT) temporarily to store one-touch dialing into memory.

The Function Buttons F1 through F10 are corresponded to speed dial numbers as follows:

| F1 | 0 |
| F2 | 1 |
| F3 | 2 |
| F4 | 3 |
| F5 | 4 |
| F6 | 5 |
| F7 | 6 |
| F8 | 7 |
| F9 | 8 |
| F10| 9 |

System Connection*

Description
System Connection allows two main units, KX-TD1232 to work together as one system. This expands the capacity of the system, number of extensions, CO lines and so on. Two connected systems are called the master and the slave systems.
A maximum capacity of the system is as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Maximum Quantity (Single System)</th>
<th>Maximum Quantity (System Connection)</th>
</tr>
</thead>
<tbody>
<tr>
<td>CO Line</td>
<td>12</td>
<td>24</td>
</tr>
</tbody>
</table>

*: Available for KX-TD1232 only.
Extension Jack 32 64
DSS Console 4 8
Doorphone 2 4
Door Opener 2 4
External Pager 2 4
Music Source 2 4

Conditions
- The following resources can be used by either system:
  (a) External pagers
  (b) Music sources used for Music on Hold
  (c) Music sources used for Background Music (BGM)
  (d) Station Message Detail Recording (SMDR); EIA (RS-232C) ports
  (e) Call Parking areas
- System Inter Connection Card (KX-TD192), optional expansion cards to connect both systems, must be installed for this feature.

System Programming and Diagnosis with Personal Computer

Description

This system can be programmed and administered using a personal computer. The EIA/Remote Programming & Diagnosis Manual and its floppy is required to perform this feature. The KX-TD816 cannot perform the diagnosis. There are two programming methods:

On-Site Programming

By connecting a personal computer (PC) to your system, system programming and maintenance can be performed locally. There are two ways available to perform the above:

(1) Using the EIA (RS-232C) port
- Connect the PC to the EIA (RS-232C) port provided. The main unit has an EIA (RS-232C) port which can be used for either system administration or SMDR.

(2) Using a modem
- Install the optional Remote Card. Connect the PC to an extension jack. Assign the floating number of the modem in System Programming. Dial this number from the PC.

Remote Programming

You can perform system programming and maintenance from a remote site using a PC. Install the Remote Card and assign the floating number of the modem in System Programming.

Starting system administration from a remote location can be done in the following ways.

- Call an extension (probably the Operator) from a remote location and request a transfer to the modem.
- Dial the floating number of the modem using the DISA feature.
- Assign the modem as the destination of the DIL 1:1 feature.

For more information and programming instructions, refer to the EIA / Remote Programming & Diagnosis Manual.

Conditions

- A proprietary telephone can be used to perform System Programming.
- Only one access is allowed to System Programming at any one time.
- To access system administration, a valid password must be entered. The password is factory-programmed and can be changed.
- System administration can be performed on-line except for the procedures of the diagnosis.

If the system goes off-line, the system functions as if it was in power failure. (Refer to Power Failure Transfer feature.)

*: Available for KX-TD1232 only.

---

**System Programming with Proprietary Telephone**

**Description**

This system can be programmed with a personal computer or a proprietary telephone (PT).

Proprietary telephones available for System Programming are:
KX-T7235; KX-T7230; KX-T7130; and KX-T7030 (Display Proprietary Telephones).

Two extensions are allowed to perform System Programming. The extensions available are:

1. An extension that is connected to jack 01.
2. An extension that is assigned as a manager.

For more information and programming instructions, refer to Section 4, "System Programming."

**Conditions**

- During System Programming the system operates normally.
- During System Programming the extension is considered to be busy.
- The display on the PT permits interactive programming.
- Only one access is allowed to System Programming at any one time.
- To access system administration, a valid password must be entered. The password is factory-programmed and can be changed.
- A personal computer can be used to perform System Programming.

3 Features

Operation References  Not applicable.

System Speed Dialing

Description  This feature supports 100 abbreviated dial numbers available to all users. A system speed dial number is dialed out by pressing the AUTO button and a 2-digit code (00 through 99). It is possible to store one hundred 24-digit telephone numbers per system (maximum).

Conditions  • Overriding Toll Restriction for System Speed Dialing can be enabled or disabled by system programming.

[For proprietary telephone users only]  • Speed Dialing, One-Touch Dialing, manual dialing, Last Number Redial and Saved Number Redial can be used in combination.

[For single line telephone users only]  • If a stored feature number includes "*" or ",", a rotary or pulse single line telephones cannot use it.

---

**Timed Reminder**

**Description**

Each telephone can be set to generate an alarm tone at a preset time as a wake up or reminder. This feature can be programmed to be active only once or every day. In the case of KX-TD1232, a voice message can be recorded for this feature.

**Conditions**

- Be sure that the system clock works.
- Setting a new time clears the preset time.

*: Available for KX-TD1232 only.
• The alarm tone continues for 30 seconds. To stop it, lift the handset or, with a proprietary telephone, press any button.
• If a voice message is used, when the user goes off-hook during the alarm tone, a pre-recorded voice message is sent. The message feature requires the optional DISA Card* and the message is recorded by Operator 1. If the message is not enabled, the user hears special dial tone.

3 Features

**Toll Restriction**

**Description**

Toll Restriction is a system programmable feature that, in conjunction with the assigned Class of Service, can prohibit certain extension users from placing unauthorized toll calls.

Every extension is programmed to belong to one of eight Classes of Service. Each Class of Service is programmed to have a toll restriction level for day mode and night mode.

There are eight toll restriction levels available. Toll restriction level 1 is the highest level and the level 8 is the lowest. That is, level 1 allows all toll calls and levels 7 and 8 disallows all toll calls. Levels 2 through 6 are used to restrict calls by combining pre-programmed deny and excepted code tables.

**Denied Code Tables**

An outgoing CO call made by an extension with a toll restriction level between 2 and 6 is first checked against the selected Denied Code Tables. If the leading digits of the dialed number (not including the line access code) are not found in the table, the call is made. There are five system programs for Denied Code Tables:

- [301]-[305] TRS Denied Code Entry for Levels 2 through 6: each program is used to make up a Denied Code Table for Levels 2 through 6 respectively.

Complete every table by storing numbers that are to be prohibited. These numbers are defined as denied codes. Each table can store up to 20 denied codes, each of which consisting of a maximum of ten digits.

**Excepted Code Tables**

These tables are used to override a programmed denied code. A call denied by the selected Denied Code Tables is checked against the selected Excepted Code Tables, and if a match is found, the call is made.

There are five system programs for these tables:

- [306]-[310] TRS Excepted Code Entry for Levels 2 through 6: each programming is used to make up an Excepted Code Table for Levels 2 through 6.

Complete every table by storing numbers that are exceptions to the denied codes. These numbers are defined as excepted codes. Each table can store up to five excepted codes, each of which consisting of a maximum of ten digits.
Extra Table
400 extra codes can be entered in one of Denied or Excepted Code Table. There is a maximum of either 420 entries for Denied Code Table or 405 entries for Excepted Code Table.

Applicable Denied and Excepted Code Tables depend on the assigned toll restriction level of an extension as follows:

<table>
<thead>
<tr>
<th>Level</th>
<th>Denied Code Tables</th>
<th>Excepted Code Tables</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level 1</td>
<td>None</td>
<td>None</td>
</tr>
<tr>
<td>Level 2</td>
<td>Table for Level 2</td>
<td>Tables for Levels 2 through 6</td>
</tr>
<tr>
<td>Level 3</td>
<td>Tables for Levels 2 and 3</td>
<td>Tables for Levels 3 through 6</td>
</tr>
<tr>
<td>Level 4</td>
<td>Tables for Levels 2 to 4</td>
<td>Tables for Levels 4 through 6</td>
</tr>
<tr>
<td>Level 5</td>
<td>Tables for Levels 2 to 5</td>
<td>Tables for Levels 5 through 6</td>
</tr>
<tr>
<td>Level 6</td>
<td>Tables for Levels 2 to 6</td>
<td>Tables for Level 6</td>
</tr>
<tr>
<td>Level 7</td>
<td>None</td>
<td>None</td>
</tr>
<tr>
<td>Level 8</td>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>

[Explanation]
Level 1: allows all calls.
Level 2: denies the codes stored in the Denied Code Table for Level 2 except the codes stored in Excepted Code Tables for Levels 2 through 6.
Level 3: denies the codes stored in the Denied Code Tables for Levels 2 and 3 except the codes stored in Excepted Code Tables for Levels 3 through 6.
Level 4: denies the codes stored in the Denied Code Tables for Levels 2 through 4 except the codes stored in Excepted Code Tables for Levels 4 through 6.
Level 5: denies the codes stored in the Denied Code Tables for Levels 2 through 5 except the codes stored in Excepted Code Tables for Levels 5 and 6.
Level 6: denies the codes stored in the Denied Code Tables for Levels 2 through 6 except the codes stored in Excepted Code Table for Level 6.
Level 7: Allows intercom calls only.
Level 8: Allows operator calls only.

Example of Toll Restriction programming
Here is an example to explain the procedures for Toll Restriction programming.
1. Determining the application

Determine the dialing numbers that should be denied for levels 2 through 6. (Levels 1, 7 and 8 are fixed and do not require programming.)

**[Entry Example]**

<table>
<thead>
<tr>
<th>Level</th>
<th>Denied Code</th>
<th>Excepted Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>011</td>
<td>None</td>
</tr>
<tr>
<td>3</td>
<td>011 976 1xxx976</td>
<td>None</td>
</tr>
<tr>
<td>4</td>
<td>011 976 1xxx976 0</td>
<td>None</td>
</tr>
<tr>
<td>5</td>
<td>011 976 1xxx976 0 411 1xxx555</td>
<td>None</td>
</tr>
<tr>
<td>6</td>
<td>011 976 1xxx976 0 411 1xxx555 1 x0 x1</td>
<td>911 1911 800 1800</td>
</tr>
</tbody>
</table>

Note: "x" substitutes a digit.

2. Programming

(1) [500]-[501] Toll Restriction Assignment

Assign a toll restriction level to each Class of Service (COS).

**[Example]**

<table>
<thead>
<tr>
<th>COS</th>
<th>Level (Day)</th>
<th>Level (Night)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1</td>
<td>6</td>
</tr>
<tr>
<td>2</td>
<td>2</td>
<td>6</td>
</tr>
<tr>
<td>8</td>
<td>8</td>
<td>8</td>
</tr>
</tbody>
</table>
(2) [301]-[305] Denied Code Table Entry
Depending on the application, enter the denied codes in the associated tables. You can use numeric characters and the wild card character “*”.

<table>
<thead>
<tr>
<th>Level-2 Denied Code Table</th>
<th>Level-3 Denied Code Table</th>
<th>Level-4 Denied Code Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Location</td>
<td>Code</td>
<td>Location</td>
</tr>
<tr>
<td>01</td>
<td>001</td>
<td>01</td>
</tr>
<tr>
<td>02</td>
<td>20</td>
<td>02</td>
</tr>
<tr>
<td>:</td>
<td>:</td>
<td>:</td>
</tr>
<tr>
<td>20</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Level-5 Denied Code Table</th>
<th>Level-6 Denied Code Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Location</td>
<td>Code</td>
</tr>
<tr>
<td>01</td>
<td>411</td>
</tr>
<tr>
<td>02</td>
<td>1* *555</td>
</tr>
<tr>
<td>:</td>
<td>:</td>
</tr>
<tr>
<td>20</td>
<td></td>
</tr>
</tbody>
</table>

(3) [306]-[310] Excepted Code Table Entry
Depending on the application, enter the excepted codes in the associated tables. You can use numeric characters and the wild card character “*”.

<table>
<thead>
<tr>
<th>Level-6 Excepted Code Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Location</td>
</tr>
<tr>
<td>1</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>3</td>
</tr>
<tr>
<td>4</td>
</tr>
<tr>
<td>5</td>
</tr>
</tbody>
</table>

[Explanation]
If your Toll Restriction Level is 6:

a) You cannot make a call whose toll call number is “201,” because the number whose second digit “0” is one of the Denied Codes for Level 6.

b) You can make a call whose toll call number is “800.” Though the number whose second digit “0” is one of the Denied Codes for Level 6, the number “800” is one of the Excepted Codes for Level 6. The Excepted Codes override the Denied Codes.
The user makes a toll call.

Is the call made by System Speed Dialing?

Yes

Is TRS Override for System Speed Dialing enabled?

No

Is the dialed number found in applicable Denied Code Tables?

Yes

Is the dialed number found in applicable Excepted Code Tables?

No

The call is denied. Reorder Tone is returned to the user.

No

The call is allowed.

Levels 7, 8

What is the extension - toll restriction level?

Levels 2, 3, 4, 5, 6

Is the dialed number found in applicable Denied Code Tables?

Yes

Is the dialed number found in applicable Excepted Code Tables?

No

Features
Conditions

- Toll restriction checks are applied to the following:
  1. Automatic Route Selection (ARS)
  2. Account Code Entry
  3. Dial Access, Automatic
  4. Line Access, CO Line Group
  5. Line Access, Individual
  6. Special Carrier Code Entry
  7. System Speed Dialing

- The Emergency numbers as Police or Fire Department should be stored in Program [310] TRS Excepted Code Entry for Level 6.
- If a stored Host PBX access code or a stored carrier code is found in the dialed number, a toll restriction check starts for succeeding telephone number.
- Toll restriction for System Speed Dialing can be cancelled for the whole system.
- It is programmable whether the "*" or "#" the user dials is to be checked or not on the Toll Restriction code. This is useful to prevent unauthorized calls which could be possible through certain Central Offices’ exchange system.
- It is programmable to admit the press of the FLASH button, during a CO call on the extensions in Levels 7 and 8.

Toll Restriction Override for System Speed Dialing

Operation References

Not applicable.
### Toll Restriction for Special Carrier Access

**Description**
If your system has access to multiple telephone companies, access to a specific company requires a carrier access code preceding the telephone number. Toll Restriction on these calls is enabled by storing the carrier codes (20 at a maximum). If a stored carrier code is found in the dialed number, a toll restriction check starts for the succeeding telephone number.

**Conditions**
A carrier access code is followed by Automatic Pause Insertion. It is possible to select the pause time in System Programming.

- Toll Restriction

**Operation References**
Not applicable.

### Toll Restriction Override by Account Code Entry

**Description**
Allows the extension user to override toll restriction temporarily to make a toll call from a toll-restricted telephone. The user can carry out this feature by entering the appropriate account code before dialing the telephone number.

**Conditions**
- The toll restriction level of the user is changed to level 2 by this feature. Thus this can be used by extension users assigned a toll restriction level from 3 through 6. The levels 1 and 2 are not changed.
- A Class of Service which is assigned Account Code Entry – Verified Toll Restriction Override permits the class members to override their toll restrictions.
- Up to 20 account codes can be programmed for Verified Account code operation. These are used for Toll Restriction Override.
- If the user does not enter any account code or enters an invalid account code, an ordinary toll restriction check is done.
Flow Chart of TRS Override by Account Code Entry

TRS Override by Account Code Entry is attempted.

Option

What is the account code mode?

Verified - All Calls

Verified - Toll Restriction Override

Is the entered code identified with the stored codes?

Yes

Is the TRS level Level 1?

No

Yes

TRS level changes to Level 2.

Toll Restriction check starts.

No

Is the entered code identified with the stored code?

Yes

The call is not allowed. Reorder tone is returned to the user.

No

The call is not allowed. Reorder tone is returned to the user.

Toll Restriction Override for System Speed Dialing

Description
Allows you to cancel Toll Restriction on System Speed Dialing. Normally, calls originated by System Speed Dialing are restricted depending on the extension's toll restriction level. Once this function is enabled, it permits all extension users to make System Speed Dialing calls with no restriction.

Conditions
None

Trunk (CO Line) Answer From Any Station (TAFAS)

Description
A tone signal is sent from the external pager when an incoming CO call is received. Any extension user can answer the call.

Conditions
• Connect a user-supplied external paging device.
• One external pager can be installed in KX-TD816. Two external pagers can be installed in KX-TD1232 per system, and System Connection* permits four pagers (maximum). These pagers are numbered from 1 through 4. To answer an incoming call dial the feature number and 1 to 4. The feature number is the same as that used to answer Paging - External.
• A floating number of a pager is programmable.
• TAFAS can be used in the following cases:
  a) The floating number of an external pager is assigned as the DIL 1:1 destination. In this case all the incoming calls on the specified line will be signaled.
  b) A DISA caller dials the floating number of an external pager.
  c) The floating number of an external pager is assigned as the Intercept Routing destination. In this case incoming calls redirected to the destination will be signaled.
• Confirmation tone is sent to the user before being connected to the caller. Eliminating the tone is programmable.

*: Available for KX-TD1232 only.
**Voice Mail Integration**

**Description**

This system can accommodate Voice Processing System (VPS) equipment, which offers the user a Voice Mail and Automated Attendant Services. If an extension user has set Call Forwarding destination to the VPS, a calling party will be forwarded to the VPS and can leave a voice message in the mailbox of the extension. When a call is transferred to the VPS by the Call Forwarding or Intercept Routing – No Answer features, the mailbox number is sent to the VPS automatically with DTMF signaling (Follow On ID). Up to eight extension jacks can be connected to VPS as extensions in the system.

**System Explanation**

1. **Voice Mail Service**
   
   1.1 **Call Forwarding to VM**

   If an extension user sets Call Forwarding (C. FWD) whose destination is the VPS, an incoming call is forwarded to the VPS under the proper conditions. The system sends to the VPS a mailbox number of the corresponding extension at that time. Therefore the calling party can leave his / her message in the mailbox of the desired extension without knowing the mailbox number.
1.2 Intercept Routing to VM
If a CO line is set as Intercept Routing – No Answer (IRNA) whose destination is the VPS, a CO call is forwarded to the VPS under the proper conditions. The system sends to the VPS a mailbox number of the corresponding extension at that time. Therefore the calling party can leave his / her message in the mailbox of the desired extension without knowing the mailbox number.

*: Available for KX-TD1232 only.
1.3 Transferring to VM

The extension user can transfer a CO call to the VPS so that calling party can leave his / her message in the mailbox of the desired extension. The extension user should use the Voice Mail (VM) Transfer button, when transferring a call to the VPS. Pressing this button and entering the extension number allows the extension user to transfer the call to the mailbox of the corresponding extension.
1.4 Changing from VM to Automated Attendant (AA)
The Automated Attendant Service is automatically activated in the following cases:
1) The incoming call is not answered by the operator and IRNA is activated.
2) The operator is assigned as a destination of DIL 1:1 and the operator sets the Call Forwarding to VPS.

1.5 Listening to a Recorded Message
If the VPS receives a message, the VPS can turn on the MESSAGE button indicator of the corresponding telephone as a notification to the user of the telephone. (Panasonic KX-TVP series can do this.) The VPS notifies the extension user that there is a message waiting in his/her mailbox. When the MESSAGE button indicator is lit, pressing the button allows the extension user to play back the stored message.

2. Automated Attendant (AA) Service
2.1 AA to Extension
AA receives and answers a CO call and offers services such as transferring to a specified extension or the corresponding mailbox by the DTMF signaling which is sent from the calling party.

*: Available for KX-TD1232 only.
Conditions

- A VPS can be assigned as the destination of the following features:
  - Call Forwarding – All Calls
  - Call Forwarding – Busy
  - Call Forwarding – Busy / No Answer
  - Call Forwarding – No Answer
  - Intercept Routing – No Answer

In these functions, the caller to the extension need not know the mailbox number of the called extension because the code is automatically transmitted to the VPS (Follow On ID function). If a DIL 1:N call is transferred to the VPS by IRNA, your system transmits the mailbox number of the lowest jack number of the receiving extensions.

- A mailbox number is a respective extension number by default. The mailbox number can be changed, only if program [990] "System Additional Information, Field (18)" is set to "free."
- Pressing the Voice Mail Transfer button and dialing the extension number allows the extension user to transfer to the corresponding mailbox. In this case, Follow On ID function is available.
- The Voice Mail extension should be set to Data Line Security to achieve proper recording.
- The KX-TD816 has one Extension Card and can have one 8-Station Line Unit. The KX-TD1232 has two Extension Cards and can have two 8-Station Line Units. It is recommended that you do not connect more than two VM ports to each card or unit.

**Volume Control – Speaker / Handset Receiver / Headset / Ringer**

| Description | Allows the proprietary telephone user to turn up or down the following volumes as desired:  
| Handset receiver volume  
| Headset volume  
| Ringer volume  
| Speaker volume |

| Conditions | The control method depends on the telephone type:  
| With a digital proprietary telephone, press the volume control button (VOLUME ▲/▼ UP/DOWN) to select a desired volume level. However the ringer volume of KX-T7220 and KX-T7250 is selected with Ringer Volume Selector (OFF/LOW/HIGH).  
| With other proprietary telephones, slide the following levers located on the left side of the telephone.  
| Volume Control (MIN–MAX)  
| Handset Headset  
| Volume Selector (NORMAL/MID/HIGH)  
| Ringer Volume Selector (OFF/LOW/HIGH) |

| Programming References | No programming required. |

Section 4
System Programming

This section provides step-by-step programming instructions for a proprietary telephone.
4.1 General Programming Instructions

Default Setting

This system has a default factory setting. If any of the programming needs to be changed, you will find the necessary information in Section 3, "Features." This makes the system very simple to install and customize as required by the customer. Any required changes can be written on "Programming Tables."

Required Telephone Set

One of the following telephone sets is required for System Programming:

- Digital Proprietary Telephone (DPT): KX-T7235, KX-T7230
- Analog Proprietary Telephone (APT): KX-T7130, KX-T7030

Extensions Used for Programming

Connect one of the above-mentioned telephone sets to either of the following:

- Jack number 1
- Jack programmed as a manager extension

To assign the manager extension, see Section 4.2 [006] "Operator / Manager Extension Assignment."
4.1.1 Using the Proprietary Telephone

Soft Buttons and SHIFT Button on the Display DPT

Three soft buttons are provided just below the display on the display Digital Proprietary Telephones (DPT). The functions of these soft buttons vary as the programming procedures advance from step to step. Those functions that are currently assigned to the buttons are shown on the lower line of the display. (See “Viewing the Display” on page 4-6 for more information on the display lines.)

If the SHIFT button indicator is on, two functions are available with each soft button. To alternate between the two functions, press the SHIFT button on the right side of the display.

System Programming 4-3
4.1.1 Using the Proprietary Telephone

Type 4

Press \textbf{SHIFT} to alternate

Type 5

Press \textbf{SHIFT} to alternate

You can use either the soft buttons or the overlay buttons. (For overlay buttons, refer to "Using the Overlay" below.) Throughout the programming you will see instructions such as "Press \textbf{PREV}." If you use the soft buttons, this means press \textbf{SHIFT}, release \textbf{SHIFT} and then press \textbf{Soft 3}. The (PREV) function is performed.

Note

If you use the soft buttons and if programming instructions tell you to press the following buttons, you may press soft buttons shown below.

<table>
<thead>
<tr>
<th>Instructions</th>
<th>Soft button</th>
</tr>
</thead>
<tbody>
<tr>
<td>SELECT</td>
<td>SEL+, SEL-, or SEL</td>
</tr>
<tr>
<td>CLEAR</td>
<td>CLR</td>
</tr>
</tbody>
</table>

Using the Overlay

A programming overlay is packed with the telephone at the factory. This overlay should be used at all times while in programming mode since the functions of the telephone keys change while in programming mode as follows: (The original names are in parentheses.)
4.1.1 Using the Proprietary Telephone

During Operation
(PAUSE)
(SP-PHONE)
(REDIAL)
(AUTO ANSWER / MUTE)
(FLASH)
(TRANSFER)
(FWD/DND)
(CONF)
(INTERCOM)
(AUTO DIAL / STORE)
(HOLD)

During Programming
PAUSE / PROGRAM
NEXT
PREV (PREVIOUS)
SELECT
FLASH
CLEAR
→
←
SECRET
STORE
END

Location of Controls with the Overlay
The pictures below show the functions of the buttons of the KX-T7235 and KX-T7230 while in programming mode.

KX-T7230

KX-T7235
4.1.1 Using the Proprietary Telephone

Viewing the Display
The display gives you helpful information, such as what you should do now, what you have done, etc.
The KX-T7230 and the KX-T7235 both utilize two information lines for programming. The upper line is called the Message Line and the lower one is called the Function Line.
The Message Line (upper) shows you what you should do or what you should select. It also allows you to confirm what you have just entered. The display capacity is 16 digits. If your entry exceeds the capacity, you can shift the display by pressing → or ← button.
The Function Line (lower) shows the current function of the soft buttons. These functions change with the programming procedures.

Before entering the programming mode
Before entering programming mode, confirm that:
• Your telephone is on-hook.
• No calls are on hold at your telephone.

Entering the programming mode

Press PROGRAM (or PAUSE) + * + # and enter your System Password (default=1234).

- The display shows the Initial Message: SYS-PGM NO? →

Notes
• If your telephone set has no PROGRAM button, substitute the PAUSE button.
• If nothing is entered in five seconds after the PROGRAM (or PAUSE) button is pressed, it is cancelled.
• The System Password entered is not shown on the display. The System Password can be changed by System Programming. Refer to Section 4.3 [107] "System Password."
• During the programming mode, your extension is treated as a busy extension.
• Only one proprietary telephone can be in programming mode at any one time.
4.1.2 Programming Ways

Advancing to the next stage

When "SYS-PGM NO? ->" is displayed, you can select one of the following:

- To go to program [000], press the NEXT button.
- To go to another program, enter the 3-digit program address.

Rotation of jack number

Each jack of your Digital Super Hybrid System supports the connection of a digital proprietary telephone and an analog device with different extension numbers (eXtra Device Port: XDP function). To program this function it is necessary to assign two parts for each jack. The first part of jack one is 01-1. The second part of jack one is 01-2. The first part of jack two is 02-1 and so on. The NEXT and PREV buttons can be used to move from jack to jack as required in programs [003], [004] and [601] through [609].

Example;

```
#01-1 NEXT #01-2 NEXT #02-1 NEXT #02-2 ......
PREV PREV PREV PREV
```

Note

The first part of a jack is for a DPT of a XDP-assigned jack. The second part is for a single line device. Program [600] "EXtra Device Port" assigns which jacks are XDP.

Storing your data

Press STORE to store your data.

- The STORE indicator lights red and confirmation tone sounds.

* Confirmation tone (one beep)

After pressing STORE, you will hear a beep. This informs you that your storage is completed.

* Alarm tone (three beeps)

If you hear the alarm, check that your entry is valid.

Making another selection within the same program address

- To make the next higher selection, press NEXT.
- To make the previous selection, press PREV.
- To make a specific selection, press SELECT and then enter the number.
4.1.2 Programming Ways

Going to another program address

After pressing STORE, you can go to another program with either of the following two methods:

(1) To go to the next larger program address:
   Press Soft 1 (SKP+) or VOLUME \( \vee \) (DOWN).

   To go to the next smaller program address:
   Press SHIFT + Soft 1 (SKP-) or VOLUME \( \wedge \) (UP).

(2) To go to a specific program address:
   Press END, then enter the Program Address.

Method (1) is useful when you want to perform a series of programs consecutively. For example, to change the programming in addresses [000] to [008], use this method. You can move from [000] to [001], from [001] to [002], and so on by pressing the SKP+ or VOLUME \( \vee \). You can move in reverse order from [008] to [007], etc. by pressing the SKP- or VOLUME \( \wedge \).

This method can also be used to move between neighboring program groups: For example, you can move between the program addresses [008] and [100], [116] and [200], and so on. Also, you can move between the smallest program address [000] and the largest one [992].

Method (2) is useful when you wish to jump to another program address. For example, you have just finished with program [006] and now you want to go to program [301]. Neither SKP+/VOLUME \( \vee \) nor SKP-/VOLUME \( \wedge \) is convenient in this case. So you should press END and enter 301.

| Note | The following programming instructions suppose that you have already entered programming mode and that you will use Method (2). |

Confirming the entries

You may review the stored programming without making any changes.

Going back to the operation mode

Two ways are available to go back to the operation mode:

(1) Lift the handset while in programming mode.

(2) When the Initial Message: SYS- FGM NO? \( \rightarrow \) is displayed, press the PROGRAM (or PAUSE) button.
   (To display the Initial Message, press END.)
4.1.3 Entering Characters

You can enter characters to store names for speed dial numbers, extension numbers, etc., by using the dialing key pad and the buttons. Each of twelve dialing keys on the dialing key pad has seven characters assigned. See the Combination Tables below.

<table>

Note: The alphabetical characters correspond to the letters shown on the twelve dialing keys on the proprietary telephone. (except Q, q, Z, z and other symbols)

Combination Table 1

* Press SHIFT to alternate between large and small letters.
4.1.3 Entering Characters

Please see the following example which shows how to select a desired character.
For example, to select the letter “M”:
Select either of the following two methods:

(1) Using the \textbf{SHIFT} and \textbf{Soft} buttons (for display DPT only)
* See Combination Table 1.
  1. Press 6. (“M” belongs to “6.”)
     * The Function Line shows: M N O
  2. Press the \textbf{Soft 1 (M)} button.
     (Press \textbf{SHIFT} to display the lower case of the above letters.)

(2) Using the \textbf{SELECT} button
* See Combination Table 2.
  1. Press 6. (“M” belongs to “6.”)
  2. Press the \textbf{SELECT} button once.
     * Pressing the \textbf{SELECT} button an appropriate number of
times gives you the desired letter. Pressing \textbf{SELECT}
twice gives the letter “m,” pressing three times gives “N,”
and so on.

Example of entering characters: to enter “Mike”:
Using method (1)
* See Combination Table 1.

\begin{table}[h]
\centering
\begin{tabular}{|c|c|}
\hline
\textbf{Step} & \textbf{Display} \\
\hline
1. Enter 6. & \begin{minipage}{2cm}
\begin{center}
\begin{tabular}{|c|c|c|c|}
\hline

d & e & f \\
\hline
\end{tabular}
\end{center}
\end{minipage} \\
\hline
\end{tabular}
\end{table}
4.1.3 Entering Characters

Using method (2)
* See Combination Table 2.

The display shows:

1. Enter 6. 6
2. Press SELECT. M
3. Enter 4. M4
4. Press SELECT six times. Mi
5. Enter 5. Mi5
6. Press SELECT four times. Mik
7. Enter 3. Mik3
8. Press SELECT four times. Mike

Notes
* To erase all the letters, press CLEAR.
* To erase the last letter, press ←.
## 4.1.4 Example of Programming

The following programming instructions suppose that you have already entered programming mode and that you will employ method (2) on page 4-8.

Example: Program [001] “System Speed Dialing Number Set”

<table>
<thead>
<tr>
<th>Sample of Description</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>001</strong>&lt;sup&gt;(1)&lt;/sup&gt;</td>

NOTICE
It is assumed that you have read Section 4.1 “General Programming Instructions.” The use of the soft buttons is discussed in the section, therefore we will not make any reference to them in the following instructions. At any time the soft buttons can be used in place of the overlay keys.

Description
Sets the current date and time.

Selection
- Year: 00 through 99
- Month: Jan. through Dec.
- Day: 1 through 31
- Day of the week: SUN / MON / TUE / WED / THU / FRI / SAT
- Hour: 1 through 12
- Minute: 00 through 59
- AM / PM

Default
- KX-TD816 – ’94 Jan. 1 SAT 12:00 AM
- KX-TD1232 – ’93 Jan. 1 FRI 12:00 AM

Programming
1. Enter 000.
   Display: Day/Time Set
2. Press NEXT.
   Display example: ’93 Jan. 1 FRI
3. Enter the year.
   To change the current entry, press CLEAR and the new year.
4. Press →.
5. Keep pressing SELECT until the desired month is displayed.
6. Press →.
7. Enter the day.
   To change the current entry, press CLEAR and the new day.
8. Press →.
9. Keep pressing SELECT until the desired day of the week is displayed.
10. Press STORE.

11. Press NEXT.

Display example: 12:00 AM

12. Enter the hour.

To change the current entry, press CLEAR and the new hour.

13. Press →.

14. Enter the minute.

To change the current entry, press CLEAR and the new minutes.

15. Press →.

16. Press SELECT for AM or PM.

17. Press STORE.

18. Press END.

Conditions

- After changing an entry, you can press STORE. You do not have to perform all of the rest of the steps.
- To go back to the previous field, press ← at steps 4 through 9 and steps 13 through 16.
- If you hear the alarm after pressing STORE, check that the date is valid.
- The clock starts immediately after the STORE button is pressed.
- You cannot leave the entry empty.

Feature References

Section 3, Features,
Display, Time and Date
System Speed Dialing Number Set

Description
Used to program the System Speed Dial numbers. These numbers are available to all extension users. There are 100 numbers from 00 through 99.

Selection
- Speed dial number: 00 through 99
- Telephone number: 24 digits (max.)

Default
All speed dial numbers – Not stored

Programming
1. Enter 001.
   Display: SPD Number Set

2. Press NEXT.
   Display: SPD Code?->

3. Enter a speed dial number.
   To enter speed dial number 00, you can also press NEXT.
   Display example: 00: Not Stored

4. Enter a telephone number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new number.

5. Press STORE.

6. To program another speed dial number, press NEXT or PREV, or SELECT and the desired speed dial number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
- There is a maximum of 100 speed dial numbers. Each speed dial number has a maximum of 24 digits. The valid characters are 0 through 9, *, and # keys, FLASH, PAUSE, SECRET and - (hyphen) buttons.
  - To store the flash signal, press FLASH.
  
Note: The stored flash will be in effect only during an established call. (Refer to Section 3 “External Feature Access.”)
To store a hyphen, press the “-” button.
4.2 Manager Programming

**System Speed Dialing Number Set (contd.)**

- To store a pause, press **PAUSE**.
  (Refer to Section 3 “Pause Insertion, Automatic.”)
- To store the feature number to convert pulse signals to DTMF signals, press the * # keys.
  (Refer to Section 3 “Pulse to Tone Conversion.”)
- To prevent the display of all or part of the number, press **SECRET** before and after confidential parts of the number. The **SECRET** button must always be entered in a pair. Or your entry is not stored. (Refer to Section 3 “Secret Dialing.”)

- If you are storing an external number, include the line access code (default=9, 81 through 88) before the number. When dialing, pause is automatically inserted after the code.
- If you are storing an account code, enter the account code before the line access code.
  (Refer to Section 3 “Account Code Entry.”)
- It is possible to store a number consisting of 25 digits or more by storing it in two speed dial numbers. A line access code should not be stored in the second speed dial number.
- To go to another speed dial number at steps 3 through 6, press **SELECT** and start with step 3.
- To display parts of the number which have scrolled off the display, press → or ←.
- Program [002] “System Speed Dialing Name Set” is used to give names to speed dial numbers.

**Feature References**

Section 3, Features,

System Speed Dialing
**Manager Programming**

### System Speed Dialing Name Set

**Description**
Assigns names to the system speed dial numbers assigned in program [001] “System Speed Dialing Number Set.” The large display telephone (KX-T7235) shows the stored name when performing System Speed Dialing.

**Selection**
- Speed dial number: 00 through 99
- Name: 10 characters (max.)

**Default**
All speed dial numbers — Not stored

**Programming**

1. Enter 002.<br>Display: SPD Name Set<br>
2. Press NEXT.<br>Display: SPD Code?–> <br>
3. Enter a speed dial number.<br>To enter speed dial number 00, you can also press NEXT.<br>Display example: 00: Not Stored<br>
4. Enter a name.<br>For entering characters, see Section 4.1.3 “Entering Characters.”<br>To delete the current entry, press CLEAR.<br>To change the current entry, press CLEAR and the new name<br>
5. Press STORE.<br>
6. To program another speed dial number, press NEXT or PREV, or SELECT and the desired speed dial number.<br>
7. Repeat steps 4 through 6.<br>
8. Press END.

**Conditions**
- Speed dial numbers are programmed in program [001] “System Speed Dialing Number Set.”
- There is a maximum of 100 names. Each name has a maximum of 10 characters.
- To go to another speed dial number at steps 3 through 6, press SELECT and start with step 3.

**Feature References**
Section 3, Features,<br>Special Features for KX-T7235 — System Speed Dialing
4.2 Manager Programming

Extension Number Set

Description
Assigns an extension number to each extension.

Selection
- **Jack number**: KX-TD816: **01 through 16 (-1 / -2)**
  KX-TD1232: **01 through 64 (-1 / -2)**
  
  (-1 = first part, -2 = second part)
- **Extension Number**: **2 through 4 digits**

Default
KX-TD816: Jack 01-1 through 16-1 = 101 through 116;
  Jack 01-2 through 16-2 = 201 through 216
KX-TD1232: Jack 01-1 through 64-1 = 101 through 164;
  Jack 01-2 through 64-2 = 201 through 264

Programming
1. Enter **003**.
   Display: EXT Number Set

2. Press **NEXT**.
   Display: Jack NO?->

3. Enter a **jack number**.
   To enter jack number 01, you can also press **NEXT**.
   To select the second part (-2), press **NEXT** after entering a jack number.
   Display: #01-1:EXT101

4. Enter an **extension number**.
   To change the current entry, press **CLEAR** and the new number.

5. Press **STORE**.

6. To program another jack, press **NEXT** or **PREV**, or **SELECT** and the desired **jack number**.

7. Repeat steps 4 through 6.

8. Press **END**.

Conditions
- There is a maximum of 32 extension numbers for KX-TD816, and 128 extension numbers for KX-TD1232. Each extension number can be two, three, or four digits, consisting of **0 through 9**. The * and # keys cannot be used.
- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available.
An extension number is invalid if the leading first or second digits disagree with the setting of the program [100] “Flexible Numbering, (01) – (16) 1st through 16th hundred extension blocks.” If one digit is assigned as the leading digit, some extensions have two digits and some have three digits. If two digits are assigned, some have three digits and some have four digits.

Two extension numbers can be assigned per jack. If XDP is disabled for the jack in program [600] “EXtra Device Port,” the extension number of the second part (XX-2) is not available. (XX = jack number)

For an explanation of jack numbering, see “Rotation of jack number” on page 4-7.

Double entry or incompatible entry is invalid including the assignment of program [813] “Floating Number Assignment.” Valid entry examples: 10 and 11; 10 and 110. Invalid entry examples: 10 and 106; 210 and 21.

Program [004] “Extension Name Set” is used to give names to extension numbers.

Extension Name Set

Description
Assigns names to the extension numbers programmed in program [003] “Extension Number Set.”

Selection
• Jack number: KX-TD816; 01 through 16 (-1 / -2)
  KX-TD1232; 01 through 64 (-1 / -2)
  (-1 = first part, -2 = second part)
• Name: 10 characters (max.)

Default
All jacks – Not stored

Programming
1. Enter 004.
   Display: EXT Name Set

2. Press NEXT.
   Display: Jack NO? ->

3. Enter a jack number.
   To enter jack number 01, you can also press NEXT.
   To select the second part (-2), press NEXT after entering a jack number.
   Display: #01-1:Not Stored

4. Enter a name.
   For entering characters, see Section 4.1.3 “Entering Characters.”
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new name.

5. Press STORE.

6. To program another jack, press NEXT or PREV, or SELECT and the desired jack number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
• There is a maximum of 32 names for KX-TD816, and 128 names for KX-TD1232. Each name has a maximum of 10 characters.
• Program [003] “Extension Number Set” is used to assign extension numbers.

Flexible CO Button Assignment

Description
Used to determine the use of the flexible CO buttons on proprietary telephones from a centralized telephone.

Selection
• Jack number: KX-TD816; 01 through 16
  KX-TD1232; 01 through 64
• Button Code (plus parameter, if required):

<table>
<thead>
<tr>
<th>Button Code</th>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 (Single-CO)</td>
<td>KX-TD816: 01 through 08 (CO line number)</td>
</tr>
<tr>
<td></td>
<td>KX-TD1232: 01 through 24 (CO line number)</td>
</tr>
<tr>
<td>1 (DSS)</td>
<td>2 through 4 digits (Extension number)</td>
</tr>
<tr>
<td>2 (One-Touch)</td>
<td>16 digits max. (Telephone number)</td>
</tr>
<tr>
<td>3 (Message Waiting)</td>
<td>None</td>
</tr>
<tr>
<td>4 (FWD/DND)</td>
<td>None</td>
</tr>
<tr>
<td>5 (Save)</td>
<td>None</td>
</tr>
<tr>
<td>6 (Account)</td>
<td>None</td>
</tr>
<tr>
<td>7 (Conference)</td>
<td>None</td>
</tr>
<tr>
<td>8 (Voice Mail Transfer)</td>
<td>2 through 4 digits (Extension number)</td>
</tr>
<tr>
<td>* (Loop-CO)</td>
<td>None</td>
</tr>
<tr>
<td># (Group-CO)</td>
<td>1 through 8 (CO line group number)</td>
</tr>
<tr>
<td>CO (ringer frequency)</td>
<td>1 through 8 (ring tone type number)</td>
</tr>
</tbody>
</table>

Default
• KX-TD816
  All jacks – CO buttons 1 through 8 = Single-CO 01 through 08;
  Ring tone type 2

• KX-TD1232
  All jacks – CO buttons 1 through 24 = Single-CO 01 through 24;
  Ring tone type 2

Programming
1. Enter 005.
   Display: Flexible Key Asn

2. Press NEXT.
   Display: Jack NO?–>

3. Enter a jack number.
   To enter jack number 01, you can also press NEXT.
   Display: PT-PGM Mode

System Programming 4-23
Manager Programming

Flexible CO Button Assignment (cont.)

4. Press a CO button to be changed. 
   The display shows the contents pre-assigned to the button. 
   
   Display example: CO-01

5. Enter a button code (plus parameter, if required). 
   To change the parameter, press CLEAR and the new parameter.

6. Press STORE.

7. 
   • To program another CO button of the same jack, repeat steps 4 through 6.
   • To program another jack, press SELECT and repeat steps 3 through 6.

8. Press END.

Canceling

1. Perform the same procedures as steps 1 through 4 above.

2. Enter 2.

3. Press STORE.

4. Press END.

Conditions

• A centralized telephone is a telephone connected to jack 01 or a jack programmed as a manager extension in program [006] “Operator / Manager Extension Assignment.”

• There is a maximum of 16 proprietary telephones for KX-TD816, and 64 proprietary telephones for KX-TD1232.

• In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available. Jack numbers in the out-of-service system are unacceptable.

• The number of the CO buttons available depends on the telephone type. (Refer to Section 3 “Buttons on Proprietary Telephones.”) To program 24 CO buttons, use the proprietary telephone, KX-T7230.

• If you press the same CO button again at step 5, you can select a desired ringer frequency for the CO button from eight types of ring tone. When you enter the tone type number (1 through 8), you will hear the selected tone type until STORE is pressed. This selection is possible only for the CO buttons that have been assigned to Single-CO, Group-CO, or Loop-CO.

Manager Programming

Operator / Manager Extension Assignment

Description
Assigns the jack number for a manager and/or operators. The manager extension can perform System Programming. Operator 1 has the ability to perform operator services.

Selection
- OPE-1 (operator 1) / OPE-2 (operator 2) / MNGER (manager)
- Jack number: KX-TD816; 01 through 16
  KX-TD1232; 01 through 64

Default
Operator 1 – Jack 01;
Operator 2 and Manager – Not stored

Programming
1. Enter 006.
   Display: Operator/Manager

2. Press NEXT to program operator 1.
   Display: OPE-1:Jack01
   To program another item, you can also keep pressing NEXT or PREV until the desired one is displayed.

3. Enter a jack number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new jack number.

4. Press STORE.

5. To program another item, press NEXT or PREV.

6. Repeat steps 3 through 5.

7. Press END.

Conditions
- Up to two operators and a manager can be programmed.
- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available.
- The manager cannot be assigned the jack number of the DSS Console Port set in program [007] “DSS Console Port and Paired Telephone Assignment.”
- If the assigned jack is in eXtra Device Port mode, the proprietary telephone jack is treated as the manager / operator extension.
- If there is no operator or manager, press CLEAR at step 3.

Manager Programming

DSS Console Port and Paired Telephone Assignment

Description
Assigns the jack numbers for the DSS Console and the paired extension.

Selection
- DSS Console number: KX-TD816; 1 through 4
  KX-TD1232: 1 through 4 (for Master), 5 through 8 (for Slave)
- Jack number for DSS Console:
  KX-TD816; 02 through 16
  KX-TD1232; 02 through 32 (for Master), 33 through 64 (for Slave)
- Jack number for paired extension:
  KX-TD816; 01 through 16
  KX-TD1232; 01 through 32 (for Master), 33 through 64 (for Slave)

Default
All DSS Consoles – Not stored

Programming
1. Enter 007.
   Display: DSS Console Asn

2. Press NEXT.
   Display: DSS NO?-

3. Enter a DSS Console number.
   To enter DSS Console number 1, you can also press NEXT.
   Display example: DSS-1:# P:#

4. Enter a jack number for the console.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new jack number.

5. Press →.

6. Enter a jack number for the paired extension.
   To change the current entry, press CLEAR and the new jack number.
   Display example: DSS-1:#02 P:#03

7. Press STORE.

8. To program another DSS Console, press NEXT or PREV, or SELECT and the desired DSS Console number.
9. Repeat steps 4 through 8.

10. Press END.

**Conditions**

- The eXtra Device Port feature must be assigned "Disable" for DSS ports.
- There is a maximum of four DSS Consoles per system. System Connection permits eight DSS Consoles for KX-TD1232. Each DSS Console must be assigned to a DSS Console jack and paired with a proprietary telephone jack in the same system.
- For KX-TD816, DSS Consoles 1 through 4 must be assigned to a jack number between 02 and 16.
- For KX-TD1232, DSS Consoles 1 through 4 must be assigned to a jack number between 02 and 32 and DSS Consoles 5 through 8 must be assigned to a jack number between 33 and 64, if available.
- DSS Consoles in the out-of-service system are unassignable. Jack numbers in the out-of-service system are unacceptable.
- The jack number for the Console and that for the paired extension must be entered together.
- Multiple DSS Consoles cannot be assigned to the same DSS Console jack.
- Multiple DSS Consoles can be paired with the same proprietary telephone jack.
- A DSS Console jack cannot be assigned the jack 01 and the jack number of Manager set in program [006] "Operator / Manager Extension Assignment."
- If all incoming CO calls are set to ring at the operator extension telephone in program [407]-[408] "DIL 1:1 Extension — Day / Night," assigning the DSS Consoles to the operator extension makes the operator's job much easier.

Manager Programming

Absent Messages

Description
Used to program the absent messages. An absent message, if set by the station user, is displayed on the calling extension’s telephone to show the reason for the user’s absence.

Selection
- Message number: 1 through 9
- Message: 16 characters (max.)

Default
1: Will Return Soon
2: Gone Home
3: At Ext %%%
4: Back at %:%%
5: Out Until %%%/%%%
6: In a Meeting
7 through 9: Blank (not stored)

Programming
1. Enter 008.
   Display: Message Asn
2. Press NEXT.
   Display: MSG NO?->
3. Enter a message number.
   To enter message number 1, you can also press NEXT.
   Display example: MSG1:Will Return
4. Enter the message.
   For entering characters, see Section 4.1.3 “Entering Characters.”
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new message.
5. Press STORE.
6. To program another message, press NEXT or PREV, or SELECT and the desired message number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- There is a maximum of nine messages. Messages 1 through 6 are programmed at the factory but can be changed. Each message has a maximum of 16 characters.
- You can enter a maximum of seven “%” characters per message which can be programmed at each user’s station. The station user can enter 0 through 9, * and # for the % characters. If the user enters digits less than the number of “%” characters, it is recommended to fill the remaining “%” characters with “#” or “*.”
- If there are 4-digit extension numbers available in your system, add one “%” to Message 3.
- To display parts of the message which have scrolled off the display, press → or ←.

Feature References
Section 3, Features,
Absent Message Capability
Flexible Numbering

Description
Assigns the leading digits of extension numbers and feature numbers for system features.

Selection
- Selection number: **01 through 53** (See “Feature Number List” on page 4-31 for the corresponding features.)
- Feature number: **1 or 2 digits** (for selection numbers 01 through 16);
  **1 through 3 digits** (for selection numbers 17 through 53)

Default
See “Feature Number List” on page 4-31.

Programming
1. Enter **100**.
   Display: FLX Numbering
2. Press NEXT.
   Display: Select NO?–>
3. Enter a selection number.
   To enter selection number 01, you can also press NEXT.
   Display example: 01. 1–EXT BL:1
4. Enter the feature number.
   To delete the feature number, press CLEAR.
   To change the current entry, press CLEAR and the new number.
5. Press STORE.
6. To program another selection, press NEXT or PREV, or SELECT and the desired selection number.
7. Repeat steps 4 through 6.
8. Press END.

To remove all the feature numbers except selection numbers (01) through (16) 1st through 16th extension blocks;
1. Enter **100**.
2. Press NEXT.
3. Enter 00.
   Display: All Feature CLR?

4. Press STORE.

5. Press END.

Conditions

- There is a maximum of 16 extension blocks, and 36 feature numbers for KX-TD816 and 37 feature numbers for KX-TD1232.
- Each extension block has one or two digits, consisting of 0 through 9. Assign the leading digits for extension numbers of the respective blocks.
- Assignment of extension blocks defines the limits for programs [003] “Extension Number Set” and [813] “Floating Number Assignment.”
- Each feature number has one through three digits, consisting of 0 through 9, *, and #.
- If * or # is included in a feature number, dial pulse telephone users cannot access the feature.
- Double entry and incompatible combinations are invalid. Valid entry example: 30 and 31, 210 and 211. Invalid entry example: 5 and 5, 30 and 301.
- If you delete a feature number, the feature cannot be used by dialing operation.
- You can remove all the feature numbers except selections (01) through (16).
- To clear an extension block (01) through (16), it is required to change the corresponding numbers assigned in program [003] “Extension Number Set” and program [813] “Floating Number Assignment.”

*: Available for KX-TD1232 only.
Description
This program is used to determine if night mode is automatic or manual.

Selection
Manual / Auto (automatic)

Default
Manual

Programming
1. Enter 101.
   Display: Day/Night Mode

2. Press NEXT.
   Display example: D/N Mode: Manual

3. Keep pressing SELECT until the desired selection is displayed.

4. Press STORE.

5. Press END.

Conditions
• If automatic switching is assigned, day / night mode is switched at the time programmed in [102] “Day / Night Service Starting Time.”
• If manual switching is assigned, operator 1 can switch the day / night mode at any time.

Feature References
Section 3, Features,
Night Service
4.3 System Programming

Day / Night Service Starting Time

Description
Sets the starting time on a day of the week basis, when automatic day / night switching is programmed in program [101] “Day / Night Service Switching Mode.”

Selection
- Day of the week selection number:
  1 (Sunday) / 2 (Monday) / 3 (Tuesday) / 4 (Wednesday) / 5 (Thursday) / 6 (Friday) / 7 (Saturday) / * (every day of the week)
- Hour: 1 through 12 / Disable (no switching)
- Minute: 0 through 59
- AM / PM

Default
Every day of the week – Day – 9:00 AM / Night – 5:00 PM

Programming
1. Enter 102.
   Display: Day/Night Time

2. Press NEXT.
   Display: Day of Week?–>

3. Enter the day of the week selection number.
   To select Sunday, you can also press NEXT.
   Display example: Sun-Day: 9:00 AM
   To select night mode, press NEXT.
   Display example: Sun-Nig: 5:00 PM

4. Enter the hour.
   To set no switching, keep pressing SELECT until “Disable” is displayed and go to step 9.
   If SELECT is pressed, the display shows the previous entry. If the previous setting was “Disable,” press SELECT to enter the starting time.
   To change the current entry, press CLEAR and the new time.

5. Press →.

6. Enter the minute.
   To change the current entry, press CLEAR and the new minutes.

7. Press →.
Day / Night Service Starting Time (contd.)

8. Press SELECT for AM or PM.

9. Press STORE.

10. To program another day / night mode or day of the week, press NEXT or PREV, or SELECT and the day of the week selection number.

11. Repeat steps 4 through 10.

12. Press END.

Conditions

- To select the desired day, you may keep pressing NEXT at step 3. To assign every day of the week to one selection, press the * key at step 3. In this case, the display shows the contents programmed for Sunday.
- If day / night switching is unwanted, select “Disable” at step 4.
- You cannot leave the entry empty.

Night Service
Automatic Access CO Line Group Assignment

Description
Assigns the sequence in which CO line groups will be accessed when in Automatic Line Access mode. When a user dials the feature number for automatic line access (default=9) or presses the L-CO button, an idle line is hunted in the programmed CO line group order.

Selection
CO line group number: 1 through 8, eight entries (max.) in desired order

Default
12345678

Programming
1. Enter 103.
   Display: Local Access

2. Press NEXT.
   Display example: Access:12345678

3. Enter the CO line group numbers in priority from top to bottom.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new order.

4. Press STORE.

5. Press END.

Conditions
• There is a maximum of eight CO line groups. Up to eight CO line group numbers can be entered.
• Automatic Line Access feature works only if Automatic Route Selection mode is turned off in program [312] “ARS Mode.”

Feature References
Section 3, Features,
Line Access, Automatic
Line Preference – Outgoing
Line Access, Direct
**Description**
Assigns the account codes for Account Code Entry, Verified – All Calls and Verified – Toll Restriction Override modes. If Verified – All Calls is assigned in program [508] “Account Code Entry Mode,” an account code is required to make a CO call. If Verified – Toll Restriction Override is assigned, an account code is only required for a toll call and overrides toll restriction.

**Selection**
- Location number: **01 through 20**
- Account code: **10 digits (max.)**

**Default**
All locations – Not stored

**Programming**
1. Enter **105**.
   Display: Account Code
2. Press **NEXT**.
   Display: Location NO?–>
3. Enter a location number.
   To enter location number 01, you can also press **NEXT**.
   Display example: 01:Not Stored
4. Enter an account code.
   To delete the current entry, press **CLEAR**.
   To change the current entry, press **CLEAR** and the new account code.
5. Press **STORE**.
6. To program another location, press **NEXT** or **PREV**, or **SELECT** and the desired location number.
7. Repeat steps 4 through 6.
8. Press **END**.

**Conditions**
- There is a maximum of 20 verifiable account codes. Each code has a maximum of 10 digits, consisting of **0 through 9**.
- Program [508] “Account Code Entry Mode” is used to select the Account Code Entry mode.
- Account codes having “99” in any part or ending with “9” are invalid. as “99” is used as a delimiter when entering an account code.

**Feature References**
Section 3, Features,
Account Code Entry
Toll Restriction Override by Account Code Entry
4.3 System Programming

Station Hunting Type

Description
Used to enable or disable hunting and set the Station Hunting type for each extension group. There are four Station Hunting types available: Circular, Termination, Voice Mail (VM), and Automated Attendant (AA). If circular hunting is assigned for a group, all the extensions in the group are hunted until an idle one is found. If termination hunting is assigned, hunting stops at the extension which has the largest jack number in the group. If VM hunting is assigned, all the VM ports of an extension group are hunted until an idle one is found to permit Voice Mail Service. If AA hunting is assigned, all the AA ports of an extension group are hunted until an idle one is found to permit AA Service.

Selection
• Extension group number: 1 through 8, * (*=all extension groups)
• Disable (no hunting) / Terminate (termination) / Circular / VM (voice mail) / AA (automated attendant)

Default
All extension groups – Disable

Programming
1. Enter 106.
   Display: Call Hunting
2. Press NEXT.
   Display: EXT GRP NO?->
3. Enter an extension group number.
   To enter extension group number 1, you can also press NEXT.
   Display example: Group1: Disable
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another extension group, press NEXT or PREV, or SELECT and the desired extension group number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
• Program [602] “Extension Group Assignment” is used to assign the extension group members.
• The system supports a maximum of eight jacks (16 jacks during System Connection for KX-TD1232) for connection to a Voice Processing System as VM or AA ports.

Voice Mail Integration
System Password

Description
Assigns the password required for entering System Programming mode and for maintenance from a personal computer.

Selection
Password: 4 through 7 digits

Default
1234

Programming
1. Enter 107.
Display: System Password

2. Press NEXT.
Display: Password: 1234

3. Enter a password.
To change the current entry, press CLEAR and the new password.

4. Press STORE.

5. Press END.

Conditions
• The password can be from four to seven digits long. The valid numbers are from 0 through 9.
• If less than four digits are entered, they are not stored.
• You cannot leave the entry empty.

System Programming and Diagnosis with Personal Computer
System Programming with Proprietary Telephone
One-Touch Transfer by DSS Button

Description
Enables or disables the function of automatically holding the CO call when a DSS button on the DSS Console or proprietary telephone is pressed.

Selection
Enable / Disable

Default
Enable

Programming
1. Enter 108.
   Display: DSS Auto Hold
2. Press NEXT.
   Display example: Auto HLD: Enable
3. Keep pressing SELECT until the desired selection is displayed.
4. Press STORE.
5. Press END.

Conditions
This assignment applies to all DSS buttons on all DSS Consoles and on all proprietary telephones in the system.

Section 3, Features,
One-Touch Transfer by DSS Button
### Expansion Unit Type

**Description**
Assigns the type of expansion units to be used in the system. This allows the system to identify the unit in each expansion unit location.

**Selection**

**KX-TD816**
- Areas 1; 2 = C1;E1 / E1;C1  
  (C1: 4-CO Line Unit, E1: 8-Station Line Unit)

**KX-TD1232**
- **Master / Slave**
- Areas 1; 2; 3 = C1;E1;E2 / C1;E2;E1 / E1;E2;C1 / E1;C1;E2 / E2;E1;C1 / E2;C1;E1  
  (C1: 4-CO Line Unit, E1: 8-Station Line Unit 1, E2: 8-Station Line Unit 2)

**Default**
- KX-TD816: C1;E1
- KX-TD1232: Master and Slave – C1;E1;E2

**Programming**

**KX-TD816**
1. Enter 109.  
   Display: Expansion Card
2. Press NEXT.  
   Display example: C1;E1
3. Keep pressing SELECT until the desired selection is displayed.
4. Press STORE.
5. Press END.

**KX-TD1232**
1. Enter 109.  
   Display: Expansion Card
2. Press NEXT to program Master System.  
   To program "Slave," press NEXT again.  
   Display example: Master: C1;E1;E2
3. Keep pressing SELECT until the desired selection is displayed.
4. Press STORE.  
   If only one system is in operation, go to step 8.
5. Press NEXT to program Slave System.  
   Display example: Slave : C1;E1;E2
6. Keep pressing SELECT until the desired selection is displayed.

7. Press STORE.

8. Press END.

Conditions

- There are two expansion areas in KX-TD816, areas 1 and 2 from bottom to top. One 8-Station Line Unit and one 4-CO Line Unit can be installed.
- There are three expansion areas in each system for KX-TD1232, areas 1, 2 and 3 from bottom to top. Up to two 8-Station Line Units and one 4-CO Line Unit can be installed in each system.
- The out-of-service system is unassignable. In this case, skip the steps 5 through 7 for KX-TD1232.
- In the case of KX-TD1232, if the Slave System only is in operation, the display shows “Slave” at step 2.
- After changing the setting, to make your setting effective, turn the Power Switch off and on once. Otherwise the previous setting will be maintained.

### Caller ID Code Set

**Description**
Sets the identification code of the calling party (Caller ID Code) to utilize Caller ID Service provided by a specific central office (CO). If an ID Code transmitted from CO is found in Caller ID Code Table, the caller’s ID Code or a name given to the code in program [111] “Caller ID Name Set” is displayed on the telephone, allowing the called party to recognize the caller.

**Selection**
- Location number: **001 through 250**
- Caller ID Code: **11 digits (max.)**

**Default**
All locations – Not stored

**Programming**

1. Enter **110**.
   Display: Caller ID Code

2. Press NEXT.
   Display: Location NO?–>

3. Enter a location number.
   To enter location number 001, you can also press NEXT.
   Display example: 001:Not Stored

4. Enter a Caller ID Code.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new code.

5. Press STORE.

6. To program another location, press NEXT or PREV, or SELECT and the desired location number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**

- There is a maximum of 250 Caller ID Codes. Each code has a maximum of 11 digits, consisting of 0 through 9.
- Program [111] “Caller ID Name Set” is used to give names to Caller ID Codes. If an ID Code is given a name, the called party’s telephone shows the name in place of the ID Code.
- Program [406] “Caller ID Assignment” is used to enable Caller ID Service on a CO line basis.

**Feature References**

*Caller ID Name Set*

**Description**
With Caller ID Service, the calling party is displayed either by its ID Code or by its name. If the name display is required, use this program to give a name to a caller ID Code stored in program [110] “Caller ID Code Set.”

**Selection**
- Location number: 001 through 250
- Caller ID Name: 15 characters (max.)

**Default**
All locations – Not stored

**Programming**

1. Enter 111.
   
   Display: Caller ID Name

2. Press NEXT.
   
   Display: Location NO?–>

3. Enter a location number.
   To enter location number 001, you can also press NEXT.
   Display example: 001:Not Stored

4. Enter a Caller ID Name.
   For entering characters, see Section 4.1.3 “Entering Characters.”
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new name.

5. Press STORE.

6. To program another location, press NEXT or PREV, or SELECT and the desired location number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
- There is a maximum of 250 Caller ID Names, which corresponds to a maximum of 250 Caller ID Codes stored in program [110] “Caller ID Code Set.”
- Each name has a maximum of 15 characters.

**Feature References**
Section 3, Features,
Caller ID
4.3 System Programming

VM Status DTMF Set

Description
Sets the DTMF signals transmitted to your Voice Processing System (VPS) to inform the VPS of the VPS ports states quickly. The following signals are sent to the VPS with the assigned DTMF signals:

- **RBT** (ringback tone): This signal is sent when calling an extension.
- **BT** (busy tone): This is sent when the called extension is busy.
- **ROT** (reorder tone): This is sent when the dialed number is invalid.
- **DND** (DND tone): This is sent when the other extension has DND assigned.
- **Answer**
- **Disconnect**: This is sent when the other extension hangs up.
- **Confirm** (confirmation tone): This is sent when the feature number for “Message Waiting Lamp” is valid.
- **FWD VM RBT** (FWD to VM ringback tone):
  - Not available (reserved).
- **FWD VM BT** (FWD to VM busy tone):
  - This is sent when the called extension has set Call Forwarding to VPS.
- **FWD EXT RBT** (FWD to extension ringback tone):
  - Not available (reserved).

Selection
- **RBT** / **BT** / **ROT** / **DND** / **Answer** / **Disconnect** / **Confirm** / **FWD VM RBT** / **FWD VM BT** / **FWD EXT RBT**
- **DTMF signal number**: 3 digits (max.)

Default
- **RBT**: 1;
- **BT**: 2;
- **ROT**: 3;
- **DND**: 4;
- **Answer**: 5;
- **Disconnect**: #9;
- **Confirm**: 9;
- **FWD VM RBT**: 6;
- **FWD VM BT**: 7;
- **FWD EXT RBT**: 8

Programming
1. Enter 113.
   
   Display: VM Status Set

2. Press NEXT to program ringback tone status.
   
   To program another status, keep pressing NEXT until the desired status is displayed.
   
   Display example: RBT : 1
3. Enter a DTMF signal **number**.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new number.

4. Press STORE.

5. To program another selection, keep pressing NEXT or PREV until the desired selection is displayed.

6. Repeat steps 3 through 5.

7. Press END.

**Conditions**
- A DTMF signal number can have a maximum of three digits, consisting of 0 through 9, *, # and PAUSE.
- The DTMF signals are sent to the extensions in the extension group that is assigned as “VM” or “AA” in program [106] “Station Hunting Type.”

**Feature References**
- Section 3, Features,
- Voice Mail Integration
Description

Sets the DTMF command signals transmitted to your Voice Processing System (VPS). There are four commands available: Leave Message; Get Message; Automated Attendant Service; Voice Mail Service. These commands are used in the following ways:

(A) If your VPS is used for Voice Mail (VM) Service

1) Call Forwarding / Intercept Routing to Voice Mail

If a call is forwarded to the VPS, your system will send a mailbox number to the VM port. This allows the caller to leave a message without knowing the mailbox number.

- Required entries (selections):
  - LV-MSG (Leave Message): This command is transmitted to a VM port if a call is forwarded or intercepted and rerouted to the port.
  - AA-SVC (Automated Attendant Service): If AA Service is set to “Start” in program [990], field (10), the “AA-SVC” command is sent to a VM port if an incoming CO call is answered by the VM port.

- Other programming required (program addresses): [106]; [602]; [609]; [990], field (10); [990], field (18)

2) Hearing the message at the extension

If the VPS receives a message and lights the MESSAGE button indicator of the concerned telephone, the telephone user can hear the message by pressing the MESSAGE button.

- Required entries (selections):
  - GETMSG (Get Message): This command is transmitted to a VM port when the message receiver presses the MESSAGE button.
  - VM-SVC (Voice Mail Service): The “VM-SVC” command is a code transmitted preceding the “GETMSG” command above. This is effective to switch to VM port when an AA port lights the MESSAGE indicator.

- Other programming required (program addresses): [609]; [990], field (18)

(B) If your VPS is used for Automated Attendant (AA) Service

An AA port answers an incoming CO call to provide AA services, such as call transfer, receiving a message.

- Required entries (selections):
  - VM-SVC (Voice Mail Service): The “VM-SVC” command is a code transmitted before “LV-MSG” code if Operator transfers a call to an extension and then it is forwarded to an AA port so that the AA port can be switched to VM port temporarily.

- Other programming required (program addresses): [106], [602]
### VM Command DTMF Set (contd.)

| Selection | • LV-MSG / GETMSG / AA-SVC / VM-SVC  
| • DTMF signal number: 16 digits (max.) |
| Default   | LV-MSG – H; GETMSG – *H; AA-SVC – #8; VM-SVC – #6 |
| Programming | 1. Enter 114.  
Display: VM Command Set  
2. Press NEXT to program the LV-MSG command.  
To program another command, keep pressing NEXT until the desired command is displayed.  
Display example: LV-MSG:H  
3. Enter a DTMF signal number.  
To delete the current entry, press CLEAR.  
To change the current entry, press CLEAR and the new number.  
4. Press STORE.  
5. To program another selection, keep pressing NEXT or PREV until the desired selection is displayed.  
6. Repeat steps 3 through 5.  
7. Press END. |
| Conditions | • A command signal number can have a maximum of 16 digits, consisting of 0 through 9, *, #, FLASH and PAUSE.  
• The FLASH button is available only for LV-MSG and GETMSG commands to store “H” which means “Home Position.”  
• If “H” is stored for “LV-MSG,” a mailbox number programmed in program [609] “Voice Mail Access Codes” or an extension number will be sent to the VM port (Follow On ID function). If certain codes are required before and after the ID code, insert “H” between the codes, as “aaaHbbb.” If nothing is stored, it will operate as “H.”  
• If “*H” is stored for “GETMSG,” a mailbox number programmed in program [609] “Voice Mail Access Codes” or an extension number will be sent to the port succeeding the “*.” |
| Feature References | Section 3, Features,  
Voice Mail Integration |
### Adjust Time

**Description**
Used to adjust the time for checking normality of system data. Every day at the programmed time, the data adjustment is performed.

**Selection**
- Hour: 1 through 12
- Minute: 00 through 59
- AM / PM

**Default**
1:00 AM

**Programming**
1. Enter 115.
   
   Display: Adjust Time

2. Press NEXT to program hour.
   
   Display example: 1:00 AM

3. Enter the hour.
   
   To change the current entry, press CLEAR and the new hour.

4. Press → to program minute.

5. Enter the Minute.
   
   To change the current entry, enter the new minute.

6. Press → to program AM / PM.

7. Press SELECT for AM or PM.

8. Press STORE.

9. Press END.

**Conditions**
You cannot leave the entry empty.

**Feature References**
None
4.3 System Programming

ROM Version Display

Description
Confirms the version of the ROM of the system.

Display example: \texttt{P011A30101A}

\begin{center}
\begin{tabular}{l}
\textit{Version} \\
\textit{Date}
\end{tabular}
\end{center}

Selection
System Number: \texttt{KX-TD816; 0}
\texttt{KX-TD1232; 0 (Master) / 1 (Slave)}

Default
Not applicable.

Programming
1. Enter 116.
   Display: ROM Version

2. Press NEXT.
   Display: System NO?->

3. Enter the System Number.
   The display shows the ROM version of the specified system.

4. To confirm the other system, press SELECT and enter the System Number.
   The display shows the ROM version of the specified system.

5. Press END.

Conditions
- The out-of-service system number is unacceptable.
- For KX-TD816, you can enter the system number 0 only.
  Skip step 4.

Feature References
None
**Hold Recall Time**

**Description**
Assigns the length of the hold recall timer. This timer is used to alert an extension that a call has been held for an extended period of time.

**Selection**
Time (seconds): 0 through 240 \( (0=\text{Hold Recall disabled}) \)

**Default**
60 s

**Programming**
1. Enter 200.
   Display: Hold Recall Time
2. Press NEXT.
   Display example: Time: 60 sec
3. Enter the time.
   To change the current entry, press CLEAR and the new time.
4. Press STORE.
5. Press END.

**Conditions**
- Select "0" if Hold Recall is not required.
- You cannot leave the entry empty.

**Feature References**
Section 3, Features, Hold Recall
## 4.4 Timer Programming

### Transfer Recall Time

<table>
<thead>
<tr>
<th>Description</th>
<th>Sets the number of rings before the transfer recall occurs. If a transferred call is not answered before the programmed number of rings, the call returns to the original caller.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selection</td>
<td>Number of rings: 3 through 48</td>
</tr>
<tr>
<td>Default</td>
<td>12 rings</td>
</tr>
</tbody>
</table>
| Programming | **1.** Enter 201.  
Display: Transfer Recall  
2. Press NEXT.  
Display example: Time: 12 rings  
3. Enter the number of rings.  
To change the current entry, press CLEAR and the new number of rings.  
4. Press STORE.  
5. Press END.  |
| Conditions  | • One ring is equivalent to five seconds.  
• You cannot leave the entry empty. |

Call Transfer, Unscreened – to Extension |
4.4 Timer Programming

Call Forwarding – No Answer Time

Description
Sets the number of rings for the Call Forwarding – No Answer feature. If a call is not answered before the programmed number of rings, the call is forwarded to the destination.

Selection
Number of rings: 1 through 12

Default
3 rings

Programming
1. Enter 202.
   Display: No Answer Time
2. Press NEXT.
   Display example: Time: 3 rings
3. Enter the number of rings.
   To change the current entry, press CLEAR and the new number of rings.
4. Press STORE.
5. Press END.

Conditions
- One ring is equivalent to five seconds.
- This timer is also used for Intercept Routing. If an incoming DISA* call to the Intercept Routing destination is not answered before this timer expires, the call will be disconnected.
- You cannot leave the entry empty.

Feature References

Timer Programming

Intercept Time

Description
Sets the number of rings for the Intercept Routing – No Answer (IRNA) feature. If a call is not answered before the programmed number of rings, the call is redirected to the programmed station.

Selection
Number of rings: 3 through 48

Default
12 rings

Programming
1. Enter 203.
   Display: Intercept Time

2. Press NEXT.
   Display example: Time: 12 rings

3. Enter the number of rings.
   To change the current entry, press CLEAR and the new number of rings.

4. Press STORE.

5. Press END.

Conditions
- One ring is equivalent to five seconds.
- Programs [409]–[410] "Intercept Extension — Day / Night" are used to program the destination of Intercept Routing on a CO line group basis in day and night modes.
- If the original extension has set Call Forwarding – No Answer, Intercept Timer starts after the Call Forwarding.
- You cannot leave the entry empty.

Call Duration Count Start Time

Description
Sets the number of seconds the system waits between the end of dialing and the start of the SMDR timer for outgoing toll calls. When the system has sent out all the digits to the central office and this timer expires, the system starts counting the call. A display telephone shows the elapsed time of the call. The starting time and the total duration of a call are recorded in the SMDR record.

Selection
Time (seconds): 0 through 60

Default
0 s

Programming
1. Enter 212.
   Display: SMDR Durat Time

2. Press NEXT.
   Display example: Time: 0 sec

3. Enter the time.
   To change the current entry, press CLEAR and the new time.

4. Press STORE.

5. Press END.

Conditions
• The timer starts counting after all the digits are dialed. This timer is not applied to incoming calls. The timer for incoming calls starts immediately.
• You cannot leave the entry empty.

Direct Inward System Access (DISA)       |

*: Available for KX-D1232 only
**Description**
Sets the maximum allowable prolonged time for a DISA CO-to-CO call. A CO-to-CO call is initially limited by the "CO-to-CO Call Duration Time" (Program [206]). However, the DISA caller can prolong the call after hearing the warning tones by pressing any key (except the * key). This parameter, the "DISA Prolong Time," sets the duration of these extended periods.

**Selection**
Time (minutes): 0 through 7 (0=no prolonging)

**Default**
3 min

**Programming**
1. Enter 214.
   Display: DISA Prolng Time
2. Press NEXT.
   Display example: Time:3 min
3. Enter the time.
   To change the current entry, enter the new time.
4. Press STORE.
5. Press END.

**Conditions**
- Do not confuse this parameter with the "CO-to-CO Call Duration Time" (Program [206]) parameter.
- Program [206] "CO-to-CO Call Duration Time" is used to set the duration time allowed for a CO-to-CO call.
- You cannot leave the entry empty.

TRS Override for System Speed Dialing

Description
Allows you to enable toll restriction override for System Speed Dial Numbers. If this is enabled, all extension users can make System Speed Dialing calls with no restriction.

Selection
Enable / Disable

Default
Disable

Programming
1. Enter 300.
   Display: SPD Override
2. Press NEXT.
   Display example: Override: Disable
3. Keep pressing SELECT until the desired selection is displayed.
4. Press STORE.
5. Press END.

Conditions
Select “Enable” for toll restriction override; Select “Disable” for toll restriction.

Feature References
Section 3, Features,
Toll Restriction Override for System Speed Dialing
4.5 TRS / ARS Programming 301-305

TRS Denied Code Entry for Levels 2 through 6

Description
These allow you to specify the numbers which are toll-restricted for each toll restriction level as follows:
- Program [301]: restricts levels 2 through 6
- Program [302]: restricts levels 3 through 6
- Program [303]: restricts levels 4 through 6
- Program [304]: restricts levels 5 through 6
- Program [305]: restricts level 6

Selection
- Location number: 01 through 20
- Toll call number: 10 digits (max.)

Default
All locations – Not stored

Programming
1. Enter a program address (301 through 305).
   Display example: TRS Deny LVL-2
2. Press NEXT.
   Display: Location NO? ->
3. Enter a location number.
   To enter location number 01, you can also press NEXT.
   Display example: 01:Not Stored
4. Enter a toll call number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new number.
5. Press STORE.
6. To program another location, press NEXT or PREV, or SELECT and the desired location number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- There is a maximum of 20 toll call numbers which can be restricted for each program. Each number has a maximum of ten digits, consisting of 0 through 9, and *. The character "*" can be used as a wild card character.
- Programs [306]-[310] “TRS Excepted Code Entry for Levels 2 through 6” are used to assign exceptions to these numbers. Programs [500]-[501] “Toll Restriction Level — Day / Night” are used to set the toll restriction value for each COS.

Toll Restriction
306-310 4.5 TRS / ARS Programming

TRS Excepted Code Entry for Levels 2 through 6

Description
These allow you to assign numbers which are exceptions to the toll restriction specified in programs [301] through [305] as follows:
- Program [306]: applies to level 2
- Program [307]: applies to levels 2 through 3
- Program [308]: applies to levels 2 through 4
- Program [309]: applies to levels 2 through 5
- Program [310]: applies to levels 2 through 6

Selection
- Location number: 1 through 5
- Exceptional number: 10 digits (max.)

Default
All locations – Not stored

Programming
1. Enter a program address (306 through 310).
   Display example: TRS Excp LVL-2
2. Press NEXT.
   Display: Location NO?->
3. Enter a location number.
   To enter location number 1, you can also press NEXT.
   Display example: 1:Not Stored
4. Enter an exceptional number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new number.
5. Press STORE.
6. To program another location, press NEXT or PREV, or SELECT and the desired location number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
There is a maximum of five numbers for each program. Each number has a maximum of ten digits, consisting of 0 through 9, and *. The character "*" can be used as a wild card character.

Notice
Store your emergency numbers in program [310].

Toll Restriction
**Special Carrier Access Codes**

**Description**
Assigns special carrier numbers. This allows the system to recognize the user-dialed special carrier number in order to insert the necessary pause and to apply toll restriction.

**Selection**
- Location number: 01 through 20
- Special carrier number: 7 digits (max.)

**Default**
All locations – Not stored

**Programming**
1. Enter 311.
   Display: Special Carrier
2. Press NEXT.
   Display: Location NO?->
3. Enter a **location number**.
   To enter location number 01, you can also press NEXT.
   Display example: 01:Not Stored
4. Enter a **special carrier number**.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new number.
5. Press STORE.
6. To program another location, press NEXT or PREV, or SELECT and the desired **location number**.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
There is a maximum of 20 special carrier numbers. Each carrier number has a maximum of seven digits, consisting of 0 through 9, and *. The character “*” can be used as a wild card character.

Pause Insertion, Automatic
Toll Restriction for Special Carrier Access
**ARS Mode**

**Description**
Allows you to turn on or off the Automatic Route Selection (ARS) mode. ARS, if enabled, selects the least expensive route to be used for a CO call.

**Selection**
On / Off

**Default**
Off

**Programming**
1. Enter 312.
   
   Display: ARS Mode

2. Press NEXT.
   
   Display example: ARS:Off

3. Press SELECT until the desired selection is displayed.

4. Press STORE.

5. Press END.

**Conditions**
- If "Off" is selected, the Automatic Line Access feature functions in place of ARS.
- Programs [313] through [331] are used to program ARS.

**Feature References**

Automatic Route Selection (ARS)
Line Access, Automatic
4.5 TRS / ARS Programming

ARS Time

Description
Assigns times for the four ARS time schedules. It is possible to split a day into four time zones (maximum) so that the least expensive line is selected for that time. According to the service hours and charges offered by your carriers, enter the starting time of each zone.

Selection
- Time schedule: Time-A / Time-B / Time-C / Time-D
- Time (hour): 1 through 12 / Disable (no schedule)
- AM / PM

Default
Time-A – 8:00 AM; Time-B – 5:00 PM; Time-C – 9:00 PM;
Time-D – Disable

Programming
1. Enter 313.
   
   Display: ARS Time

2. Press NEXT to program Time-A.
   
   Display example: Time-A: 8:00 AM
   
   To program another time schedule, keep pressing NEXT or PREV until the desired time schedule is displayed.

3. Enter the hour.
   
   To set no schedule (Disable), press SELECT, and go to step 6.
   
   If "Disable" is selected, pressing SELECT shows the previous stored hour.
   
   To change the current entry, press CLEAR and the new hour.

4. Press → to select AM / PM.

5. Press SELECT for AM or PM.

6. Press STORE.

7. To program another time schedule, keep pressing NEXT or PREV until the desired time schedule is displayed.

8. Repeat steps 3 through 7.

9. Press END.

Conditions
- The times must be programmed in sequence from Time-A to Time-D.
- Enter a starting time for each time schedule. Select “Disable” for an unnecessary schedule.
- You cannot leave the entry empty.

Automatic Route Selection (ARS)
ARS Leading Digit Entry for Plans 1 through 8

Description

By entering numbers into each leading digit plan (programs below) you are starting the process to determine which CO line group will be used to route the call.

Program: [314] [315] [316] [317] [318] [319] [320] [321]
Plan: 1 2 3 4 5 6 7 8

These eight plans are used to analyze the number which the user dials and to decide the route plan for the call. If the user-dialed number is registered in plan 1, then Routing Plan 1 is selected for the call. ARS Leading Digit Entry for Plans 1 through 8 match ARS Routing Plans 1 through 8 (programs [322] through [329]) respectively.

Selection

- Location number: 01 through 100
- Leading digit number: 10 digits (max.)

Default

All locations – Not stored

Programming

1. Enter a program address (314 through 321).
   Display example: ARS Leading PL-1

2. Press NEXT.
   Display: Location NO?->

3. Enter a location number.
   To enter location number 01, you can also press NEXT.
   Display example: 01:Not Stored

4. Enter a leading digit number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new number.

5. Press STORE.

6. To program another location, press NEXT or PREV, or
   SELECT and the desired location number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions

There is a maximum of 100 leading digit numbers for each plan. Each number has a maximum of ten digits, consisting of 0 through 9, and *.

The character "*" can be used as a wild card character.

ARS Routing Plans 1 through 8

Description
Assigns the CO line group and modification plan to be used for each route plan and time schedule.

Program: [322] [323] [324] [325] [326] [327] [328] [329]
Plan: 1 2 3 4 5 6 7 8

Selection
- Time schedule: A / B / C / D
- CO line group number: 1 through 8
- Modification table number: 1 through 8

Default
All time schedules – Not stored

Programming
1. Enter a program address (322 through 329).
   Display example: ARS Route PL-1

2. Press NEXT to program time schedule A.
   To program another time schedule, keep pressing NEXT or PREV until the desired time schedule is displayed.
   Display example: A:G M , G M , G M

3. Enter a CO line group number.
   To delete the current entry, press CLEAR.
   To change the current entry, enter the new number.

4. Press → to enter the paired modification table number.

5. Enter a modification table number.
   To delete the current entry, press CLEAR.
   To change the current entry, enter the new modification table number.

6. Press → to enter the next priority CO line group number.

7. Repeat steps 3 through 6 to enter other CO line group numbers and modification table numbers.

8. Press STORE.

9. To program another time schedule, keep pressing NEXT or PREV until the desired time schedule is displayed.

10. Repeat steps 3 through 9.

11. Press END.

Conditions
- Up to three CO line groups and modification plans can be assigned for
each time schedule. A CO line group number and a modification table number must be entered together. The highest priority CO line group number and modification table number is entered first (left to right).

- Programs [330] "ARS Modify Removed Digit" and [331] "ARS Modify Added Number" are used to make up eight Modification Tables.

Feature References

Section 3, Features,
Automatic Route Selection (ARS)
**ARS Modify Removed Digit**

**Description**
Determines how the dialed number should be modified before sending to the central office. You can delete the digits from the beginning of the dialed number.

**Selection**
- Modification table number: 1 through 8
- Number of digits to be deleted: 0 through 9 (0=no deleting)

**Default**
All modification tables – 0

**Programming**
1. Enter 330.
   - Display: ARS Modify Remov
2. Press NEXT.
   - Display: Modify Table?–>
3. Enter a modification table number.
   - To enter table number 1, you can also press NEXT.
   - Display example: 1:0
4. Enter the number of digits to be deleted.
   - To change the current entry, enter the new number.
5. Press STORE.
6. To program another modification table, press NEXT or PREV, or SELECT and the desired modification table number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
There is a maximum of eight Modification Tables. Each table has a 1-digit number of digits to be deleted.

**Feature References**
Section 3, Features,
Automatic Route Selection (ARS)
ARS Modify Added Number

Description
Determines how the dialed number should be modified before sending to the central office. Digits are added to the beginning of the dialed number.

Selection
- Modification table number: 1 through 8
- Number to be added: 20 digits (max.)

Default
All modification tables – Not stored

Programming
1. Enter 331.
   Display: ARS Modify Add
2. Press NEXT.
   Display: Modify Table?->
3. Enter a modification table number.
   To enter table number 1, you can also press NEXT.
   Display example: 1:
4. Enter the number to be added.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and the new number.
5. Press STORE.
6. To program another modification table, press NEXT or PREV, or SELECT and the desired modification table number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- There is a maximum of eight Modification Tables, each of which can be given a number to be added.
- Each number has a maximum of 20 digits, consisting of 0 through 9, *, #, and PAUSE.

Feature References

Automatic Route Selection (ARS)
Extra Entry Table Selection

Description
Selects the code table which enables the extra 400 entries within Denied or Except Code Table.

Selection
- Deny / Except
- Level number: 2 through 6

Default
Except - 2

Programming
1. Enter 332.
   
   Display: Extra Table Sel.

2. Press NEXT.

   Display example: Table:Except-2

3. Keep pressing SELECT until the desired selection is displayed.

4. Press → to enter a level number.

5. Enter a level number.

   Display example: Table:Except-3

6. Press STORE.

7. Press END.

Conditions
There is a maximum of either 420 toll call numbers for Denied Code Table or a maximum of 405 toll call numbers for Excepted Code Table.

Feature References
Section 3, Features,
Toll Restriction
TRS Entry Code Assignment for Extra Table

**Description**
This program allows you to specify the numbers for extra Denied or Excepted Code Table for expansion.

**Selection**
- Location number: **001 through 400**
- Toll call number: **10 digits (max.)**

**Default**
All locations – Not stored

**Programming**
1. Enter 333.
   
   Display: TRS Extra Table

2. Press NEXT.
   
   Display: Location NO?—>

3. Enter a **location number**.
   
   To enter location number 001, you can also press NEXT.
   
   Display example: 001:Not Stored

4. Enter a **toll call number**.
   
   To delete the current entry, press CLEAR.
   
   To change the current entry, press CLEAR and the new number.

5. Press STORE.

6. To program another location number, press NEXT or PREV, or SELECT and the desired **location number**.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
There is a maximum of either 420 toll call numbers for Denied Code Table or a maximum of 405 toll call numbers for Excepted Code Table. Each number has a maximum of ten digits, consisting of 0 through 9, and * . The character "*" can be used as a wild card character.

4.5 CO Line Programming

**CO Line Connection Assignment**

**Description**
Used to identify the CO lines which are connected to the system(s). This prevents users from originating a call to a line which is not connected.

**Selection**
- CO line number:
  - KX-TD816: 01 through 08, * (*=all CO lines)
  - KX-TD1232: 01 through 24, * (*=all CO lines)
- Connect / No Connect

**Default**
All CO lines – Connect

**Programming**
1. Enter 400.
   Display: CO Connection
2. Press NEXT.
   Display: CO Line NO?–>
3. Enter a CO line number.
   To enter CO line number 01, you can also press NEXT.
   Display example: C001:Connect
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- In the case of KX-TD1232, C001 through C012 are for the Master System and C013 through C024 are for the Slave, if available.
- To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for C001.

**Feature References**
Section 3, Features,
CO Line Connection Assignment
**CO Line Programming**

**CO Line Group Assignment**

**Description**
Each CO line must be assigned to a CO line group. This program defines the CO line group assignment for each CO line. For example, if there are multiple telephone service companies available, the CO lines can be grouped by company.

**Selection**
- CO line (CO) number:
  - KX-TD816: 01 through 08, * (*=all CO lines)
  - KX-TD1232: 01 through 24, * (*=all CO lines)
- CO line group (TRG) number: 1 through 8

**Default**
CO01 – TRG 1; CO05 – TRG 5;
CO02 – TRG 2; CO06 – TRG 6;
CO03 – TRG 3; CO07 – TRG 7;
CO04 – TRG 4; CO08 – TRG 8 (for KX-TD816)
CO08 through CO24 – TRG 8 (for KX-TD1232)

**Programming**
1. Enter 401.
   Display: Trunk Group Asn
2. Press NEXT.
   Display: CO Line NO?->
3. Enter a CO line number.
   To enter CO line number 01, you can also press NEXT.
   Display example: CO01: TRG 1
4. Enter the CO line group number.
   To change the current entry, enter the new CO line group number.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
- To assign all CO lines to one CO line group, press the * key at step 3. In this case, the display shows the contents programmed for CO01.

**Feature References**
Section 3, Features,
CO Line Group
4.5 CO Line Programming

Dial Mode Selection

Description
Each CO line can be programmed for DTMF, pulse (rotary) or call blocking. This program assigns your choice to each line.

DTMF: The dialing signals from an extension, either tone or pulse, are converted to tone signals and transmitted to the CO line.

Pulse: The dialing signals from an extension, either tone or pulse, are converted to pulse signals and transmitted to the CO line.

Call blocking: If your central office can receive both DTMF and pulse signals but you are contracted for pulse, select this mode. When dialing on the line with a touch tone telephone, only the pulse signals are sent to the CO line.

Selection
• CO line number:
  KX-TD816; 01 through 08, * ( * = all CO lines)
  KX-TD1232; 01 through 24, * ( * = all CO lines)

• DTMF / Pulse / C. Block (call blocking)

Default
All CO lines – DTMF

Programming
1. Enter 402.
   Display : CO Dial Mode
2. Press NEXT.
   Display : CO Line NO?->
3. Enter a CO line number.
   To enter CO line number 01, you can also press NEXT.
   Display example: C001:DTMF
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
• In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
• To assign all lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.
• If DTMF is assigned, set the DTMF time of the line in program [404] “DTMF Time.”
• If pulse or call blocking is assigned, set the pulse speed of the line in program [403] “Pulse Speed Selection,” and set the pulse break ratio and inter-digit pause in program [990] “System Additional Information, Field (17)” and in “Field (21),” if needed.

4.5 CO Line Programming

Pulse Speed Selection

Description
A CO line set for pulse or call blocking mode in program [402] “Dial Mode Selection” can have two pulse rates, 10 pps (low) and 20 pps (high). This program sets the pulse speed for each CO line set to pulse or call blocking mode.

Selection
• CO line number:
  KX-TD816: 01 through 08, * (=all CO lines)
  KX-TD1232: 01 through 24, * (=all CO lines)

• 10 pps / 20 pps

Default
All CO lines – 10 pps

Programming
1. Enter 403.
   Display: Pulse Speed
2. Press NEXT.
   Display: CO Line NO?->
3. Enter a CO line number.
   To enter CO line number 01, you can also press NEXT.
   Display example: CO01:10pps
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
• In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
• To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.
• The pulse speed required is determined by the CO or PBX line.
• Program [990] “System Additional Information, Field (17) and Field (21)” are used to select a pulse break ratio and inter-digit pause, if needed.

Dial Type Selection
**Description**
A CO line set to DTMF mode in program [402] “Dial Mode Selection” can have two settings. This program sets the duration of the DTMF signals sent to a CO line to DTMF mode.

**Selection**
- CO line number:
  - KX-TD816: 01 through 08, * (=all CO lines)
  - KX-TD1232: 01 through 24, * (=all CO lines)
- Time (milliseconds): 80 / 160

**Default**
All CO lines – 80 ms

**Programming**
1. Enter 404.
   Display: DTMF Time
2. Press NEXT.
   Display: CO Line NO?–>
3. Enter a CO line number.
   To enter CO line number 01, you can also press NEXT.
   Display example: CO01: 80msec
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
- To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.
- The DTMF time required is determined by the CO line or PBX line.

**Feature References**
Section 3, Features, Dial Type Selection
**Description**
Assigns the expected minimum duration of the CPC Signal on incoming CO calls. If this is programmed, the system disconnects the line when the CPC Signal is detected.

**Selection**
- CO line number:
  - KX-TD816: 01 through 08, * (all CO lines)
  - KX-TD1232: 01 through 24, * (all CO lines)
- Time (milliseconds): Disable (no detection) / 100 / 200 / 300 / 400 / 500 / 600

**Default**
All CO lines – 400 ms

**Programming**
1. Enter 405.
   Display: CPC Detection
2. Press NEXT.
   Display: CO Line NO?->
3. Enter a CO line number.
   To enter CO line number 01, you can also press NEXT.
   Display example: C001:400msec
4. Keep pressing SELECT until the desired time is displayed.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
- To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.
- You may disable CPC Signal Detection for a CO line.
- Program [415] “CPC Signal Detection Outgoing Set” is used to program CPC Signal Detection for outgoing CO calls.

**Feature References**
Section 3, Features,
Calling Party Control (CPC) Signal Detection
*Direct Inward System Access (DISA)
**4.5 CO Line Programming**

**Caller ID Assignment**

**Description**
Enables Caller ID feature for the CO lines to which Caller ID Service is offered by a Central Office by contract.

**Selection**
- CO line number:
  - KX-TD816: 01 through 08, * (asterisk = all CO lines)
  - KX-TD1232: 01 through 24, * (asterisk = all CO lines)
- Enable / Disable

**Default**
All CO lines – Disable

**Programming**

1. Enter 406.
   
   Display: Caller ID Asn

2. Press NEXT.
   
   Display: CO Line NO?–>

3. Enter a CO line number.
   
   To enter CO line number 01, you can also press NEXT.
   
   Display example: CO01:Disable

4. Keep pressing SELECT until the desired selection is displayed.

5. Press STORE.

6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
- In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
- To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.
- The following programs are used to program Caller ID feature: [110] “Caller ID Code Set” and [111] “Caller ID Name Set.”

Caller ID
407-408  4.5  CO Line Programming

**DIL 1:1 Extension — Day / Night**

**Description**
The Direct In Lines (DIL) 1:1 feature allows incoming CO calls to be directed to a specific extension. When a CO line is assigned as DIL 1:1, it is necessary to assign the destination. These programs specify the extension number for day or night mode.

**Selection**
- CO line number:
  - KX-TD128:01 through 08, * ( *=all CO lines)
  - KX-TD1232:01 through 24, * ( *=all CO lines)
- Extension number: 2 through 4 digits / Disable (no DIL 1:1)

**Default**
All CO lines — Disable — Day / Night

**Programming**
1. Enter a program address (407 for day or 408 for night).
   Display example: DIL 1:1 Asn Day
2. Press NEXT.
   Display: CO Line NO?—>
3. Enter a CO line number.
   To enter CO line number 0 1, you can also press NEXT.
   Display example: CO01:Disable
4. Enter an extension number.
   To change the current entry, press CLEAR and the new number.
   To disable DIL 1:1, press CLEAR.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available. CO line numbers in the out-of-service system are unacceptable.
- To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.
- You set the extension numbers in program [003] “Extension Number Set” or floating numbers of pagers, DISA* messages and the modem* in program [813] “Floating Number Assignment.”

*: Available for KX-TD1232 only.
If a CO line is also programmed for DIL 1:N in programs [603]-[604] "DIL 1:N Extension and Delayed Ringing — Day / Night," it is regarded as a DIL 1:1 line.

Feature References

Section 3, Features,
Direct In Lines (DIL) Night Service
*Direct Inward System Access (DISA)

*: Available for KX-TD1232 only.
Description
Intercept Routing provides an automatic re-direction of calls which cannot or have not been answered. These programs set the destination in both day and night modes for each line group.

Selection
- CO line group (TRG) number: 1 through 8, *
  ( * = all CO line groups)
- Extension number: 2 through 4 digits / Disable (no Intercept Routing)

Default
All CO line groups – Disable — Day / Night

Programming
1. Enter a program address (409 for day or 410 for night).
   Display example: TRG Intercep Day
2. Press NEXT.
   Display: TRK GRP NO?–>
3. Enter the CO line group number.
   To enter CO line group number 1, you can also press NEXT.
   Display example: TRG1:Disable
4. Enter an extension number.
   To change the current entry, press CLEAR and the new number.
   To disable Intercept Routing, press CLEAR.
5. Press STORE.
6. To program another CO line group, press NEXT or PREV, or SELECT and the desired CO line group number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- You set the extension numbers in program [003] “Extension Number Set” or floating numbers of pagers, DISA* messages in program [813] “Floating Number Assignment.” You cannot assign the floating number of the modem.
- To assign all CO line groups to one selection, press the * key at step 3.
  In this case, the display shows the contents programmed for CO line group 1.
- Program [401] “CO Line Group Assignment” is used to assign each CO line to a CO line group.

Feature References
Section 3, Features,
Intercept Routing

*: Available for KX-TD1232 only.
Description
Assigns Host PBX or Centrex access codes. If the system is installed behind a host PBX or a Centrex system, an access code is required to make a CO / Centrex call or to access Centrex features. Up to four codes can be stored for a CO line group assigned the line.

Selection
- CO line group (TRG) number: 1 through 8, *
  (* = all CO line groups)
- Access code: 1 or 2 digits, four different entries (max.)

Default
All CO line groups – Not stored

Programming
1. Enter 411.
Display: TRG Host PBX NO.

2. Press NEXT.
Display: TRK GRP NO?–>

3. Enter a CO line group number.
To enter CO line group number 1, you can also press NEXT.
Display example: TRGl: , , ,

4. Enter an access code.
To delete the current entry, press CLEAR.
To change the current entry, press CLEAR and the new access code.
Display example: TRGl:01, , ,

5. To enter more access codes for the same CO line group, press → and enter the access codes until all the required entries are completed.
Display example: TRGl:01,08,10,22

6. Press STORE.

7. To program another CO line group, press NEXT or PREV, or SELECT and the desired CO line group number.

8. Repeat steps 4 through 7.

9. Press END.
Conditions

- This program is only required if a host PBX or Centrex line is connected to the system. Program [401] “CO Line Group Assignment” is used to assign the line to a CO line group.
- There is a maximum of four access codes per CO line group. Each code has one or two digits, consisting of 0 through 9.
- If conflicting access codes (such as 8 and 81) are stored for the same CO line group, the 1-digit code (8) only will be in effect.
- When the programmed codes are dialed, Automatic Pause Insertion and Toll Restriction are applied to the calls. The programmed pause time (in program [412] “Pause Time”) is automatically inserted after the access code.
- To assign all CO line groups to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO line group 1.

Feature References

Section 3, Features,
External Feature Access  Pause Insertion, Automatic
Host PBX Access
4.5 CO Line Programming

Pause Time

Description
Assigns the length of the pause time. The programmed pause time is automatically inserted after a line access code or a host PBX access code programmed in [411] “Host PBX Access Codes” or manually inserted if the PAUSE button is pressed by the user.

Selection
• CO line group number: 1 through 8, * (*=all CO line groups)
• Time (seconds): 1.5 / 2.5 / 3.5 / 4.5

Default
All CO line groups – 1.5 s

Programming
1. Enter 412.
   Display: TRG Pause Time

2. Press NEXT.
   Display: TRK GRP NO?–>

3. Enter a CO line group number.
   To enter CO line group number 1, you can also press NEXT.
   Display example: TRGl:1.5sec

4. Keep pressing SELECT until the desired time is displayed.

5. Press STORE.

6. To program another CO line group, press NEXT or PREV, or SELECT and the desired CO line group number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
• To assign all CO line groups to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO line group 1.
• Program [401] “CO Line Group Assignment” is used to assign each CO line to a CO line group.

### 4.5 CO Line Programming

#### Flash Time

**Description**
Assigns the length of the flash time. If your system is installed behind a host PBX or Centrex line, External Feature Access (EFA) is necessary to obtain their services. To enable it, select a required hooking signal sending time for the CO line group.

**Selection**
- CO line group (TRG) number: 1 through 8, *
  - (* = all CO line groups)
- Time (milliseconds): Disable (no EFA) / 80 / 96 / 112 / 200 / 300 / 400 / 500 / 600 / 700 / 800 / 900 / 1000 / 1100 / 1200

**Default**
All CO line groups – 600 ms

**Programming**

1. Enter 413.
   Display: TRG Flash Time

2. Press NEXT.
   Display: TRK GRP NO?–>

3. Enter a CO line group number.
   To enter CO line group number 1, you can also press NEXT.
   Display example: TRG1: 600msec

4. Keep pressing SELECT until the desired time is displayed.

5. Press STORE.

6. To program another CO line group, press NEXT or PREV, or SELECT and the desired CO line group number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
- You may disable EFA, if not required. The Flash feature will be in effect in place of EFA. Program [414] “Disconnect Time” is used to select the time required for the Flash feature.
- The flash time required is determined by the central office or the host PBX lines.
- To assign all CO line groups to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO line group 1.
- Program [401] “CO Line Group Assignment” is used to assign each CO line to a CO line group.

**Feature References**

Section 3, Features,
External Feature Access        Flash

4-92    System Programming
**Description**
Determine the amount of time between successive accesses to the same CO line, if "Disable" is selected in program [413] "Flash Time." The flash feature provides a released loop during the programmed time.

**Selection**
- CO line group (TRG) number: 1 through 8, *
  (* = all CO line groups)
- Time (seconds): 1.5 / 4.0

**Default**
All CO line groups 1.5 s

**Programming**
1. Enter 414.
   Display: TRG Disconnect Time
2. Press NEXT.
   Display: TRK GRP NO? ->
3. Enter a CO line group number.
   To program CO line group number 1, you can also press NEXT.
   Display example: TRG1: 1.5 sec
4. Keep pressing SELECT until the desired time is displayed.
5. Press STORE.
6. To program another CO line group, press NEXT or PREV, or SELECT and the desired CO line group number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- The disconnect time must be longer than the requirements of the central office or the host PBX.
- To assign all CO line groups to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO line group 1.
- Program [401] "CO Line Group Assignment" is used to assign each CO line to a CO line group.

---

### CPC Signal Detection Outgoing Set

**Description**
Enables or disables CPC Signal Detection during the time between the originated CO call and the established CO call. If this is enabled, the system disconnects the line with the time set in program [405] “CPC Signal Detection Incoming Set” when CPC Signal is detected.

**Selection**
- CO line number:
  - KX-TD816: 01 through 08, * (all CO lines)
  - KX-TD1232: 01 through 24, * (all CO lines)

- **Enable (detection) / Disable (no detection)**

**Default**
Disable

**Programming**

1. Enter 415.
   
   Display: CPC Outgoing Asn

2. Press NEXT.
   
   Display: CO Line NO?->

3. Enter a CO line number.
   
   To enter CO line number 01, you can also press NEXT.
   
   Display example: CO01:Disable

4. Keep pressing SELECT until the desired selection is displayed.

5. Press STORE.

6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
- Some central offices (CO) may send CPC-like signals during the dialing sequence and an attempt to make a call may be terminated. If your CO is such a type, select “Disable.”
- Program [405] “CPC Signal Detection Incoming Set” is used to set CPC Signal Detection Time.
- In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
- To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.

**Feature References**

Section 3, Features,  
Calling Party Control (CPC) Signal Detection  
*Direct Inward System Access (DISA)*

4-94 System Programming  
*: Available for KX-TD1232 only.
Description
Enables or disables to detect Reverse Circuit. This feature is not used in the U.S.A.

Selection
- CO line number:
  KX-TD816; 01 through 08, * (*=all CO lines)
  KX-TD1232; 01 through 24, * (*=all CO lines)
- Regular (no detection) / Reverse (detection)

Default
Regular

Programming
1. Enter 416.
   Display: Reverse Circuit
2. Press NEXT.
   Display: CO Line NO?->
3. Enter a CO line number.
   To enter CO line number 01, you can also press NEXT.
   Display example: CO01:Regular
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
To assign all CO lines to one selection, press the * key at step 3. In this case, the display shows the contents programmed for CO01.

Feature References
Section 3, Features, Reverse Circuit
**Description**

Each extension must be assigned a Class of Service (COS). These programs set the toll restriction value for each COS in day or night mode.

**Selection**

- COS number: 1 through 8. * ( * = all COS)
- Level number: 1 through 8

**Default**

All COS – Level 1 — Day / Night

**Programming**

1. Enter a program address (500 for day or 501 for night).
   
   Display example: TRS Level Day

2. Press NEXT.
   
   Display: COS NO?->

3. Enter a COS number.
   
   To enter COS number 1, you can also press NEXT.
   
   Display example: COS1:1

4. Enter a level number.
   
   To change the current entry, press CLEAR and the new number.

5. Press STORE.

6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**

- To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

**Feature References**

Section 3, Features, Night Service  
Toll Restriction
Description
This program allows you to restrict the duration of CO calls on a Class of Service (COS) basis.

Selection
- COS number: 1 through 8, * (* = all COS)
- Disable (no limit) / Enable (limit)

Default
All COS – Disable

Programming
1. Enter 502.
   Display: CO Durat. Limit
2. Press NEXT.
   Display: COS NO?->
3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Disable
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- A CO call originated or answered by the programmed extension user is disconnected when the time specified in program [205] “Extension-to-CO Line Call Duration Time” expires.
- Extensions in the limited classes cannot establish a CO-to-CO call, that is, cannot transfer / forward a CO call to another CO line or perform an Unattended Conference.
- To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.
- Program [990] “System Additional Information, Field (12)” is used to program Limited Call Duration to be done for outgoing calls only.

Feature References
Section 3, Features,
Call Forwarding – to CO Line Conference, Unattended
Call Transfer, Screened – to CO Line Limited Call Duration
Call Transfer to CO Line

This program determines which Classes of Services (COS) are allowed to perform the Call Transfer to CO Line function.

**Selection**
- COS number: 1 through 8. * (* = all COS)
- Enable / Disable

**Default**
All COS – Enable

**Programming**
1. Enter 503.
   Display: Transfer to CO

2. Press NEXT.
   Display: COS NO?->

3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Enable

4. Keep pressing SELECT until the desired selection is displayed.

5. Press STORE.

6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
- To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

Call Forwarding to CO Line

Description
This program determines which Classes of Services (COS) are allowed to perform the Call Forwarding to CO Line function.

Selection
- COS number: 1 through 8, * (*=all COS)
- Disable / Enable

Default
All COS – Disable

Programming
1. Enter 504.
   Display: Call FWD to CO
2. Press NEXT.
   Display: COS NO?->
3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Disable
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

Executive Busy Override

Description
Determines which Classes of Services (COS) are allowed to perform Executive Busy Override – CO Line / Extension. Executive Busy Override allows the user to intrude into an established call.

Selection
- COS number: 1 through 8, * ( * = all COS)
- Disable / Enable

Default
All COS – Disable

Programming
1. Enter 505.
   Display: Busy Override
2. Press NEXT.
   Display: COS NO?–>
3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Disable
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

Executive Busy Override Deny

Description
This program is used to determine which Classes of Services (COS) are allowed to deny Executive Busy Override. Executive Busy Override Deny allows the user to prevent Executive Busy Override - CO Line / Extension from being executed by another extension user.

Selection
- COS number: 1 through 8, * (*=all COS)
- Disable / Enable

Default
All COS – Enable

Programming
1. Enter 506.
   Display: Busy Over. Deny

2. Press NEXT.
   Display: COS NO?–>

3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Enable

4. Keep pressing SELECT until the desired selection is displayed.

5. Press STORE.

6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
- To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

System Programming 4-101
Do Not Disturb Override

Description
This program determines which Classes of Services (COS) are allowed to perform Do Not Disturb (DND) Override.

Selection
- COS number: 1 through 8. * (* = all COS)
- Disable / Enable

Default
All COS – Disable

Programming
1. Enter 507.
   Display: DND Override

2. Press NEXT.
   Display: COS NO?->

3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Disable

4. Keep pressing SELECT until the desired selection is displayed.

5. Press STORE.

6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
- To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

Feature References
Section 3, Features,
Do Not Disturb (DND) Override
Account Code Entry Mode

Description
There are three account code modes: Option, Verified-All Calls and Verified-Toll Restriction Override. This program determines the mode to be used by each Class of Service (COS).

Option mode: The user can enter any account code, if needed.
Verified – All Calls mode:
The user must always enter a pre-assigned account code to make a CO call.
Verified – Toll Restriction Override mode:
The user must enter a pre-assigned account code when the user needs to override toll restriction.

Selection
• COS number: 1 through 8, * (* = all COS)
• Option / Verify – All (Verified-All Calls) / Verify – Toll (Verified-Toll Restriction Override)

Default
All COS – Option

Programming
1. Enter 508.
   Display: Call Accounting
2. Press NEXT.
   Display: COS NO?->
3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Option
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
• To assign all COS to one selection, press the * key at step 3. In this case, the display shows the contents programmed for COS 1.
• Program [105] “Account Codes” is used to define the Account Codes for the Verified modes.
• Program [601] “Class of Service” is used to assign a Class of Service to each extension.

Feature References

EXtra Device Port

Description
EXtra Device Port (XDP) allows a single line telephone (SLT) to be connected to the same jack as a digital proprietary telephone (DPT). This program assigns which jacks are XDP. The SLT and DPT of the programmed jack work as independent extensions.

Selection
- Jack number: KX-1D816; 01 through 16, * (*=all CO jacks)
  KX-TD1232; 01 through 64, * (*=all CO jacks)
- Disable / Enable

Default
All jacks – Disable

Programming
1. Enter 600.
   Display: XDP Assign
2. Press NEXT.
   Display: Jack NO?->
3. Enter a jack number.
   To enter jack number 01, you can also press NEXT.
   Display example: #01:Disable
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another jack, press NEXT or PREV, or SELECT and the desired jack number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- The eXtra Device Port feature must be assigned “Disable” for DSS ports.
- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available.
- To assign all jacks to one selection, press the * key at step 3. In this case, the display shows the contents programmed for Jack 01.
- Immediately after changing your assignment, the changed setting may not work for a maximum of eight seconds.

**Class of Service**

**Description**
Programs each extension for a Class of Service (COS). The COS determines the call handling abilities of each extension.

**Selection**
- Jack number: KX-TD816; 01 through 16, * (-1/-2),
  KX-TD1232; 01 through 64, * (-1/-2),
  (* = all jacks, -1 = first part, -2 = second part)
- COS number: 1 through 8

**Default**
All jacks-1/2 – COS 1

**Programming**
1. Enter 601.
   Display: COS Assign
2. Press NEXT.
   Display: Jack NO?->
3. Enter a **jack number**.
   To enter jack number 01, you can also press NEXT.
   To select the second part (-2), press NEXT after entering a jack number.
   Display example: #01-1:COS1
4. Enter a **COS number**.
   To change the current entry, enter the new number.
5. Press STORE.
6. To program another jack, press NEXT or PREV, or SELECT and the desired **jack number**.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- There is a maximum of eight Classes of Service. Every extension must be assigned to a Class of Service and is subject to the COS Programming of programs [500] through [508] and [991].
- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available.
  Jack numbers in the out-of-service system are unacceptable.
- For an explanation of jack numbering, see “Rotation of jack number” on page 4-7.
- To assign all jacks to one COS, press the * key at step 3. In this case, the display shows the contents programmed for Jack 01.
- Program [811] “DISA User Codes” is also used to assign a Class of Service to a DISA User Code.

**Feature References**
Section 3, Features,
Class of Service (COS)

*: Available for KX-TD1232 only.
**Extension Group Assignment**

**Description**
Assigns each extension to an extension group. Extension groups are used for Group Call Pickup, Station Hunting, and Paging – Group. This program is also used to assign all Voice Mail ports / Automated Attendant ports of your Voice Processing System, if available, to an extension group.

**Selection**
- Jack number: KX-TD816; 01 through 16, * (-1 / -2),
  KX-TD1232; 01 through 64, * (-1 / -2),
  (* = all jacks, -1 = first part, -2 = second part)
- Extension group number: 1 through 8

**Default**
All jacks-1/2 – Extension group 1

**Programming**
1. Enter 602.
   Display: EXT Group Asn
2. Press NEXT.
   Display: Jack NO?–>
3. Enter a jack number.
   To enter jack number 01, you can also press NEXT.
   To select the second part (-2), press NEXT after entering a jack number.
   Display example: #01-1:EXG1
4. Enter the extension group number.
   To change the current entry, enter the new extension group number.
5. Press STORE.
6. To program another jack, press NEXT or PREV, or SELECT and the desired jack number.
7. Repeat steps 4 through 6.
8. Press END.

**Conditions**
- There is a maximum of eight extension groups. Each extension can only belong to one group.
- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available.
- For an explanation of jack numbering, see “Rotation of jack number” on page 4-7.
- To assign all jacks to one extension group, press the * key at step 3.
  In this case, the display shows the contents programmed for Jack 01.

4.8 Extension Programming 603-604

DIL 1:N Extension and Delayed Ringing — Day / Night

Description
A DIL 1:N line can be assigned to ring more than one extension. All incoming calls from the programmed CO lines are directed to the specified extensions. These programs assign the extensions and the notification method for each CO line in both day and night modes.

Selection
- Jack number: KX-TD816; 01 through 16, * (-1 / -2), KX-TD1232; 01 through 64, * (-1 / -2).
  (* = all jacks, -1 = first part, -2 = second part)
- CO line number:
  KX-TD816; 01 through 08, * (* = all CO lines)
  KX-TD1232; 01 through 24, * (* = all CO lines)
- Disah (disable) / Immdt (immediate ringing) / 1RNG (1 ring delay) / 3RNG (3 rings delay) / 6RNG (6 rings delay) / NoRNG (no ring)

Default
All jacks-1/2 – all CO lines – Immediate ringing — Day / Night

Programming
1. Enter a program address (603 for day or 604 for night).
   Display example: DIL 1:N Asn Day
2. Press NEXT.
   Display: Jack NO?->
3. Enter a jack number.
   To enter jack number 01, you can also press NEXT.
   To select the second part (-2), press NEXT after entering a jack number.
   Display example: #01-1:CO01:Immdt
4. Enter the CO line number.
   You can also keep pressing → or ← until the desired CO line number is displayed.
5. Keep pressing SELECT until the desired selection is displayed.
6. Press STORE.
7. To program another jack, press NEXT or PREV, or SELECT and the desired jack number.
8. Repeat steps 4 through 7.

9. Press END.

Conditions

- An extension can be assigned as the destination of as many CO lines as is required.
- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available. Jack numbers in the out of service system are unacceptable.
- For an explanation of jack numbering, see “Rotation of jack number” on page 4-7.
- To assign all jacks or all CO lines to one selection, press the * key at step 3 or step 4. In these cases, the display shows the contents programmed for Jack 01 or for CO line 01.
- There are six notification methods:
  (1) Immediate ringing: rings immediately
  (2) 1 ring delay
  (3) 3 rings delay
  (4) 6 rings delay
  (5) No ring: only the indicator flashes
  (6) Disable: no incoming call
- When you change the jack number by pressing NEXT or PREV, the CO line number is not changed. Example #03-1:CO06.....Press NEXT.....#03-2:CO06

Feature References

Section 3, Features,
Direct In Lines (DIL) Ringing, Delayed Night Service
### Description
Determines the CO lines which can be accessed by an extension in both day and night modes. The extension users can make outgoing CO calls using the assigned CO lines.

### Selection
- **Jack number:** KX-TD816: 01 through 16, * (-1/-2),
  
  KX-TD1232: 01 through 64, * (-1/-2),
  
  (* = all jacks, -1 = first part, -2 = second part)
- **CO line number:**
  
  KX-TD816: 01 through 08, * ( *= all CO lines)
  
  KX-TD1232: 01 through 24, * ( *= all CO lines)
- **Enabl (enable) / Disab (disable)**

### Default
All jacks-1/2 – all CO lines – Enable — Day / Night

### Programming
1. Enter a **program address** (605 for day or 606 for night).
   
   **Display example:** CO Out Day

2. Press **NEXT**.
   
   **Display:** Jack NO?->

3. Enter a **jack number**.
   
   To enter jack number 01, you can also press **NEXT**.
   
   To select the second part (-2), press **NEXT** after entering a jack number.
   
   **Display example:** #01-1:CO01:Enabl

4. Enter the desired **CO line number**, or keep pressing → or ← until the desired CO line is displayed.
   
   To change the current entry, enter the new number.

5. Keep pressing **SELECT** until the desired selection is displayed.

6. Press **STORE**.

7. To program another jack, press **NEXT** or **PREV**, or **SELECT** and the desired **jack number**.

8. Repeat steps 4 through 7.

9. Press **END**.
Conditions

- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available. Jack numbers in the out-of-service system are unacceptable.
- For an explanation of jack numbering, see "Rotation of jack number" on page 4-7.
- To assign all jacks or all CO lines to one selection, press the * key at step 3 or 4. In these cases, the display shows the contents programmed for Jack 01 or CO01.
- To assign no CO line group for a station, press CLEAR at step 4.

4.8 Extension Programming 607-608

Doorphone Ringing Assignment — Day / Night

Description
These programs assign the extensions which will ring when a doorphone call is received during the day and night modes. Programmed extensions are also allowed to open the door.

Selection
- Jack number: KX-TD816; 01 through 16, * (-1 / -2), KX-TD1232; 01 through 64, * (-1 / -2), (* = all jacks, -1 = first part, -2 = second part)
- Doorphone number:
  KX-TD816; 1 and 2, two entries (max.)
  KX-TD1232; 1 through 4, four entries (max.)

Default
Jack 01-1— All doorphones; Other jacks — no doorphone — Day / Night

Programming
1. Enter a program address (607 for day or 608 for night).
   Display example: Doorphone in Day

2. Press NEXT.
   Display: Jack NO?->

3. Enter a jack number.
   To enter jack number 01, you can also press NEXT.
   To select the second part (-2), press NEXT after entering a jack number.
   Display example: #01-1:1234

4. Enter the doorphone numbers.
   To assign no doorphone, press CLEAR.
   To change the current entry, press CLEAR and the new doorphone numbers.

5. Press STORE.

6. To program another jack, press NEXT or PREV, or SELECT and the desired jack number.

7. Repeat steps 4 through 6.

8. Press END.
Doorphone Ringing Assignment — Day / Night (contd.)

Conditions

- In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available.
- For an explanation of jack numbering, see “Rotation of jack number” on page 4-7.
- To assign all jacks to one selection, press the * key at step 3. In this case, the display shows the contents programmed for Jack 01.
- Two doorphones can be installed in each system. In the case of KX-TD1232, Doorphones 1 and 2 are installed in the Master System, 3 and 4 in the Slave, if available.
- You can enter up to two (for KX-TD816) or four (for KX-TD1232) doorphone numbers for each extension.

### Voice Mail Access Codes

| Description | Assigns a mailbox number for each extension, only if program [990] "System Additional Information, Field (18)" is set to "free." |
| Selection | • Jack number: KX-TD816; 01 through 16 (-1/-2), KX-TD1232; 01 through 64 (-1/-2), (-1 = first part, -2 = second part)  
• Mailbox number: 16 digits (max.) |
| Default | All jacks – Not stored |
| Programming | 1. Enter 609.  
Display: Mailbox ID Code  
2. Press NEXT.  
Display: Jack NO?->  
3. Enter a jack number.  
To enter jack number 01, you can also press NEXT.  
To select the second part (-2), press NEXT after entering a jack number.  
Display example: #01-1:Not Stored  
4. Enter a mailbox number.  
To delete the current entry, press CLEAR.  
To change the current entry, press CLEAR and the new number.  
5. Press STORE.  
6. To program another jack, press NEXT or PREV, or SELECT and the desired jack number.  
7. Repeat steps 4 through 6.  
8. Press END. |
| Conditions | • In the case of KX-TD1232, jack numbers 01 through 32 are for the Master System and 33 through 64 are for the Slave, if available. Jack numbers in the out-of-service system are unacceptable.  
• For an explanation of jack numbering, see "Rotation of jack number" on page 4-7.  
• The system supports a maximum of eight jacks (16 jacks during System Connection) for connection to a Voice Processing System as the Voice Mail or Automated Attendant ports.  
• Each mailbox number has a maximum of 16 digits, consisting of 0 through 9, *, # and PAUSE.  
• To display parts of the mailbox number which have scrolled off the display, press → or ←. |

#### SMDR Incoming / Outgoing Call Log Printout

<table>
<thead>
<tr>
<th>Description</th>
<th>Used to determine which calls will produce an SMDR printout.</th>
</tr>
</thead>
</table>
| Selection   | • Outgoing calls: All (all calls) / Toll (toll calls only) / Off (no printing)  
               • Incoming calls: On (all calls) / Off (no printing) |
| Default     | Outgoing calls – All; Incoming calls – On |
| Programming | 1. Enter 800.  
               Display: Duration Log  
               2. Press NEXT to program outgoing calls.  
                  Display: Outgoing:All  
               3. Keep pressing SELECT until the desired selection is displayed.  
               4. Press STORE.  
               5. Press NEXT to program incoming calls.  
                  Display: Incoming:On  
               6. Keep pressing SELECT until the desired selection is displayed.  
               7. Press STORE.  
               8. Press END. |
| Conditions  | • It is necessary to connect a printer to the EIA (RS-232C) port provided on the system.  
               • After connecting a printer, do not press the RETURN key, if provided on the printer, in 10 seconds. Otherwise, the usage of the EIA port is changed to system programming and printout will not occur.  
               • If “Toll” is selected, the system will print out all the calls starting from the numbers stored in programs [301]–[305] “TRS Denied Code Entry for Levels 2 through 6.” |

4.9 Resource Programming

**SMDR Format**

<table>
<thead>
<tr>
<th>Description</th>
<th>Used to match the SMDR output to the paper size being used in the printer. Page length determines the number of lines per page. Skip perforation determines the number of lines to be skipped at the end of every page.</th>
</tr>
</thead>
</table>
| Selection   | • Page length (lines): 4 through 99  
• Skip perforation (lines): 0 through 95  |
| Default     | Page length – 66; Skip perforation – 0 |
| Programming | 1. Enter 801.  
   Display: SMDR Format  

2. Press NEXT to program page length.  
   Display example: Page Length: 66  

3. Enter the page length.  
   To change the current entry, press CLEAR and the new page length.  

4. Press STORE.  

5. Press NEXT to program skip perforation.  
   Display example: Skip Perf: 0  

6. Enter the skip perforation.  
   To change the current entry, press CLEAR and the new skip perforation.  

7. Press STORE.  

8. Press END.  

| Conditions | • The page length should be four lines or more longer than the skip perforation length.  
• A title is positioned on the first three lines on every page.  
• The programmed format becomes valid only if the EIA (RS-232C) cable is connected. If a printer is already connected, disconnect it and connect again. Otherwise the former format becomes valid. |

System Data Printout

**Description**
Starts or stops printing of the system data. All the current system-programmed data is printed out.

**Selection**
Start / Stop

**Default**
Not applicable.

**Programming**

1. Enter 802.
   
   Display: System Data Dump

2. Press NEXT.
   
   Display: Print-Out:Start

3. Press STORE to start printing.
   
   Printing starts.
   To stop printing in the middle of printing, press SELECT and go to step 4.
   When printing is completed, the display shows:
   
   Display: Print-Out:Finish

4. Press STORE.
   
   Display: Print-Out:Stop

5. Press END.

**Conditions**

- It is necessary to connect a printer to the EIA (RS-232C) port provided on the system.
- After connecting a printer, do not press the RETURN key, if provided on the printer, for 10 seconds. Otherwise, the usage of the EIA port is changed to system programming and printout will not occur.
- You may stop printing by pressing the END button, while records are being printed out.
- You cannot restart the printout while records are being output.

Music Source Use

Description
Assigns the music source to be used for Music on Hold and Background Music (BGM).

Selection
• Hold / BGM
• Music source number: KX-TD816; 1 / No Use
  KX-TD1232; 1 through 4 / No Use

Default
Hold and BGM – Music 1

Programming
1. Enter 803.
   Display: Music Source Use
2. Press NEXT to program Music on Hold.
   Display example: Hold: Music 1
3. Enter a music source number.
   To select no music source, press CLEAR.
   To change the current entry, enter the new music source number.
4. Press STORE.
5. Press NEXT to program BGM.
   Display example: BGM: Music 1
6. Enter a music source number.
   To select no music source, press CLEAR.
   To change the current entry, enter the new music source number.
7. Press STORE.
8. Press END.

Conditions
• The music source is a user-supplied item. For KX-TD816, one music source can be installed, for KX-TD1232, two music sources can be installed per system. Music sources 1 and 2 are connected to the Master System, 3 and 4 are to the Slave, if available. Any music source can be used by either system.
• To disable music, press CLEAR at steps 3 and 6.
• Program [804] “External Pager BGM” is used to enable / disable BGM for each external pager.

#### EIA (RS-232C) Parameters

**Description**
Assigns the communication parameters for the EIA (RS-232C) interface for Port 1 (for KX-TD816 and Master System of KX-TD1232) or Port 2 (for Slave System of KX-TD1232).

**New line code:** Select the code for your printer or personal computer. If your printer or personal computer automatically feeds lines with carriage return, select “CR.” If not, select “CR+LF.”

**Baud rate:** A baud rate code indicates the data transmission speed from the system to the printer or personal computer.

**Word length:** A word length code indicates how many bits compose a character.

**Parity:** A parity code indicates what type of parity is used to detect an error in the string of bits composing a character. Make an appropriate selection depending on the requirements of your printer or personal computer.

**Stop bit:** A stop bit code indicates the end of a bit string which composes a character. Select an appropriate value depending on the requirements of your printer or personal computer.

**Selection**
- New line code: CR+LF / CR
  (CR=Carriage Return, LF=Line Feed)
- Baud rate (baud): 150 / 300 / 600 / 1200 / 2400 / 4800 / 9600
- Word length (bits): 7 / 8
- Parity bit: None / Mark / Space / Even / Odd
- Stop bit length (bits): 1 / 2

**Default**
New line code = CR+LF; Baud rate = 9600; Word length = 8;
Parity bit = Mark; Stop bit = 1 — Port 1 / Port 2

**Programming**
1. Enter a program address (806 for Port 1 or 807 for Port 2).
   Display example: RS232C Paramet.1

2. Press NEXT to program new line code.
   Display example: NL-Code:CR+LF

3. Keep pressing SELECT until the desired selection is displayed.

4. Press STORE.

5. Press NEXT to program baud rate.
   Display example: Baud Rate:9600

6. Keep pressing SELECT until the desired selection is displayed.
7. Press STORE.

8. Press NEXT to program word length.
   Display example: Word Length: 8bits

9. Keep pressing SELECT until the desired selection is displayed.

10. Press STORE.

11. Press NEXT to program parity bit.
    Display example: Parity: Mark

12. Keep pressing SELECT until the desired selection is displayed.

13. Press STORE.

14. Press NEXT to program stop bit.
    Display example: Stop Bit: 1bit

15. Keep pressing SELECT until the desired selection is displayed.

16. Press STORE.

17. Press END.

**Conditions**

- The following combinations are invalid.

<table>
<thead>
<tr>
<th>Parity</th>
<th>Word Length</th>
<th>Stop Bit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mark</td>
<td>8</td>
<td>2</td>
</tr>
<tr>
<td>Space</td>
<td>8</td>
<td>1</td>
</tr>
<tr>
<td>Space</td>
<td>8</td>
<td>2</td>
</tr>
</tbody>
</table>

- The program address of the out-of-service system port is unacceptable.

**DISA Security Type**

**Description**
Assigns the security mode for CO calls attempted by the DISA caller. There are two modes: Non Security and Trunk Security (CO line security). Non Security mode allows the caller to access a CO line without dialing a DISA user code. Trunk Security mode requires the caller to enter a DISA User Code assigned in program [811] “DISA User Codes” before making a CO call.

**Selection**
Non (non security) / Trunk (trunk security)

**Default**
Non

**Programming**
1. Enter 809.
   Display: DISA Security
2. Press NEXT.
   Display example: Security: Non
3. Keep pressing SELECT until the desired selection is displayed.
4. Press STORE.
5. Press END.

**Conditions**
Program [811] “DISA User Codes” is used to program DISA User Codes.

**Feature References**
Section 3, Features,
Direct Inward System Access (DISA)
**DISA Tone Detection**

**Description**
Enables or disables Tone Detection for DISA CO-to-CO calls. Enabling tone detection allows the system to detect the end of the call.

**Selection**
Enable / Disable

**Default**
Enable

**Programming**
1. Enter 810.
   Display: DISA Tone Detect
2. Press NEXT.
   Display: Tone DTC:Enable
3. Keep pressing SELECT until the desired selection is displayed.
4. Press STORE.
5. Press END.

**Conditions**
None

**Feature References**
Section 3, Features,
Direct Inward System Access (DISA)
**4.9 Resource Programming**

**DISA User Codes**

**Description**
Assigns the DISA User Codes and assigns a Class of Service (COS) to each code. The COS of the code determines the toll restriction level of the DISA caller.

**Selection**
- DISA user code number: 1 through 4
- DISA user code: 4 digits
- COS number: 1 through 8

**Default**
- Code 1=1111 – COS 1;
- Code 2=2222 – COS 1;
- Code 3=3333 – COS 1;
- Code 4=4444 – COS 1

**Programming**
1. Enter 811.
   Display: DISA User Code
2. Press NEXT.
   Display: User Code NO?->
3. Enter a DISA user code number.
   To enter user code number 1, you can also press NEXT.
   Display example Code1:1111 COS:1
4. Enter a DISA user code.
   To change the current entry, enter the new code.
5. Press → to program COS.
6. Enter a COS number.
   To change the current entry, enter the new COS number.
7. Press STORE.
8. To program another user code, press NEXT or PREV, or SELECT and the desired DISA user code number.
9. Repeat steps 4 through 8.
10. Press END.

**Conditions**
- This setting is required if Trunk (CO line) Security mode is selected in program [809] “DISA Security Type.”
- There are four programmable user codes. Each code should be unique, composed of four numerical digits, 0 through 9.
- You cannot leave the entry empty.

Direct Inward System Access (DISA)
4.9 Resource Programming

DISA DTMF Repeat*

Description
Selects whether the system transmits DTMF signals directly to the central office (CO) or if the system repeats the DTMF signals to CO in order to adjust gain. This can be done for a DISA CO-to-CO call during dialing and / or during an established call.

Selection
• Dial (during dialing) / Call (during an established call)
• Mode: Repeat / Through

Default
Dial and Call – Repeat

Programming
1. Enter 812.
   Display: DISA DTMF Repeat

2. Press NEXT to program the mode during dialing.
   To program the mode during an established call, press NEXT again.
   Display example: Dial:Repeat

3. Keep pressing SELECT until the desired selection is displayed.

4. Press STORE.

5. Press NEXT to program the mode during an established call.
   Display example: Call:Repeat

6. Keep pressing SELECT until the desired selection is displayed.

7. Press STORE.

8. Press END.

Conditions
None

Feature References
Section 3, Features,
Direct Inward System Access (DISA)

*: Available for KX-TD1232 only.
Floating Number Assignment

Description
Assigns the floating numbers for External Pagers, DISA* messages, and the modem.* These numbers can be used the same way extension numbers are used for station access.

Selection
- Floating station: KX-TD816; Pager1
  KX-TD1232: Pager1 / Pager2 / Pager3 / Pager4 / DISA1 / DISA2 / MODEM
- Floating number: 2 through 4 digits

Default
KX-TD816: Pager 1=196
KX-TD1232: Pager 1=196; Pager 2=197; Pager 3=296;
  Pager 4=297; DISA 1=198; DISA 2=298;
  MODEM=299

Programming
1. Enter 813.
   Display: FLT EXT NO.

2. Press NEXT to program Pager 1.
   Display example: Pager1:EXT196
   To program another floating station for KX-TD1232, keep pressing NEXT or PREV until the desired floating station is displayed.

3. Enter a floating number.
   To change the current entry, press CLEAR and the new floating number.

4. Press STORE.

5. To program another floating station, keep pressing NEXT or PREV until the desired floating station is displayed.

6. Repeat steps 3 through 5.

7. Press END.

Conditions
- In the case of KX-TD816, skip steps 5 and 6.
- A floating number is composed of two through four numerical digits, 0 through 9.
- The leading one or two digits of the floating numbers are subject to program [100] "Flexible Numbering, (01) through (16) 1st through 16th hundred extension blocks."

*: Available for KX-TD1232 only.
Floating numbers and extension numbers should be unique. Double entry and incompatible entry for these numbers are invalid. Valid entry example: 10 and 11, 10 and 110; Invalid entry example: 10 and 106, 210 and 21.

You cannot leave the entry empty.

System Additional Information

Description
Adds the following programming items, if required:

Area 1
There are 10 fields available in Area 1 as follows:

Display example

```
0 0 1 0 1 0 0 0 1 1 0 0 0 0 0 1
```

Field number
(10) (9) (8) (7) (6) (5) (4) (unused) (3) (2) (1)

Area 2
There are 13 fields available in Area 2 as follows:

Display example

```
1 1 1 0 0 1 0 0 0 0 0 1 0 1 1 0 0
```

Field number

Area 3
KX-TD816: [1] through [8] below match CO lines 1 through 8
KX-TD1232: [1] through [16] below match CO lines 1 through 16

Display example

```
0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
```

CO number
[16][15][14][13][12][11][10][9][8][7][6][5][4][3][2][1]

Field number
(23)*

Area 4
KX-TD1232: [17] through [24] below match CO lines 17 through 24:

Display example

```
1 1 1 1 1 1 1 0 0 0 0 0 0 0 0 0
```

CO number
[24][23][22][21][20][19][18][17]

Field number
(unused) (25) (24) (23)*

*: CO numbers [9] through [24] in the Field number (23) are available for KX-TD1232 only.

4.10 Option Programming

System Additional Information (contd.)

Selection
- Area code: 01 (area 1) / 02 (area 2) / 03 (area 3) / 04 (area 4)
- Field number: 1 through 22 (for areas 1 and 2)
  23 through 25 (for areas 3 and 4)
- Selection: See “Selection” shown above for each area.

Default
See “Default” shown above.

Programming
1. Enter 990.
   Display: System Add Inf.

2. Press NEXT.
   Display: Area NO?->

3. Enter an area code (01 through 04).
   Display example: 00100001100001

4. Keep pressing ← or → to move the cursor to the desired field.

5. Enter your selection (0 or 1).
   To change the current entry, press STORE and the new selection.

6. To program another field, repeat steps 4 and 5.

7. Press STORE.

8. To program another area, press SELECT and the desired area code.

9. Repeat steps 4 through 8.

10. Press END.

Conditions
None

Feature References
See “References” shown above.
4.10 Option Programming

COS Additional Information

Description
(1) Sets the number of digits allowed to dial out during a CO call on a Class of Service (COS) basis. If an outside party hangs up and the extension user tries to dial out still on the CO line, the system will disconnects the line at the time the assigned digits are dialed. This program can be added if CPC Signal Detection is not provided by the CO.

The Field (1) shown below is used to enter your selection.

(2) Enables or disables the Call Forwarding – Follow Me feature on a COS basis.

The Field (2) below is used to enter your selection.

</tbody>
</table>
6.1 Troubleshooting

6.1.2 Connection

Connection between the KX-TD816/KX-TD1232 and a proprietary telephone:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The T/R is connected to the D1/D2.</td>
<td>Use the correct cord (inner 2 wires are for T/R and the outer 2 wires are for D1/D2).</td>
</tr>
</tbody>
</table>

*The P1/P2 is connected to the D1/D2.

Use the correct cord (2 wires second from the outside for D1/D2 and the outer 2 wires are for P1/P2).

Connection between the KX-TD816/KX-TD1232 and a single line telephone:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The T/R is connected to the D1/D2.</td>
<td>Use the correct cord (inner 2 wires are for T/R).</td>
</tr>
<tr>
<td>- If a telephone equipped with an A-A1 relay is connected to the KX-TD816/KX-TD1232, set the A-A1 relay switch of the telephone to “OFF.”</td>
<td></td>
</tr>
</tbody>
</table>

Connection between the KX-TD816/KX-TD1232 and a single line telephone that is polarity-sensitive:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The “T” is connected to the “R.”</td>
<td>Reverse the connections of the T/R.</td>
</tr>
</tbody>
</table>

(Continued on the following page.)

*: Available for KX-TD1232 only.
6.1 Troubleshooting

Connection between the central office and the KX-TD816/KX-TD1232:

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>CO lines are connected to the T2/T1.</td>
<td>Reconnect the CO lines to the T1/R1 or T2/R2 of the telephone jack using 2-conductor wiring.</td>
</tr>
</tbody>
</table>

CO lines are connected to the T2/R1.

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>PROBABLE CAUSE</th>
<th>POSSIBLE SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>When using the speakerphone mode with a proprietary telephone KX-T7130 or KX-T7030, nothing is audible. When using the speakerphone/monitor mode with a DPT, KX-T7220/KX-T7230/KX-T7235/KX-T7250, nothing is audible.</td>
<td>• The HANDSET / HEADSET selector of the KX-T7130 or KX-T7030 is set to the “HEADSET” position. • The “HEADSET” mode is selected by Station Programming, “Handset/Headset Selection.”</td>
<td>• When the headset is not used, set the HANDSET / HEADSET selector to the “HANDSET” position. • When the headset is not used, select the “HANDSET” mode by Station Programming.</td>
</tr>
<tr>
<td>The unit does not ring.</td>
<td>• The Ringer Volume Selector is set to “OFF.” • The CO line numbers are not programmed.</td>
<td>• Set to “HIGH” or “LOW.” • See Section 4.8 [603]-[604] “DIL 1:N Extension and Delayed Ringing — Day / Night.”</td>
</tr>
</tbody>
</table>
### Troubleshooting

<table>
<thead>
<tr>
<th><strong>PROBLEM</strong></th>
<th><strong>PROBABLE CAUSE</strong></th>
<th><strong>POSSIBLE SOLUTION</strong></th>
</tr>
</thead>
</table>
| During a power interruption, extensions connected to jack numbers 1, 2, 9, 10 for KX-TD816, and 1, 2, 9, 10, 17, 18 for KX-TD1232 do not operate. | • A DPT or APT is connected to the jack.  
• The dialing mode (tone or pulse) is improper. | • Disconnect the DPT or APT and connect a single line telephone.  
• Set the Tone / Pulse switch to the other position. |
| • During system connection operation for KX-TD1232, originating an intercom/CO call from a system to the other system is not possible. | Interface between the systems is disconnected. | Connect the interface between the systems and press the Reset Button on both systems. |
| Originating a CO call, Call Transfer, or Conference cannot be performed. | The corresponding CO button does not exist on the proprietary telephone. | Program the CO button. See Section 4.2 [005] “Flexible CO Button Assignment.” |

### 6.1.4 Using Reset Button

If the system does not operate properly, use the Reset Button.  
(If Master and Slave Systems are in operation by System Connection for KX-TD1232, reset both systems.)  
Before using the Reset Button, try the system feature again to confirm whether there definitely is a problem or not.

**Notes:**

(a) When the System Clear Switch is set to “NORMAL,” pressing the Reset Button causes the following:

1. Camp-on is cleared.
2. Calls on Hold are terminated.
3. Calls on Exclusive Hold are terminated.
4. Calls in progress are terminated.
5. Call Park is cleared.

Other data stored in memory except the above are not cleared.
6.1 Troubleshooting

(b) When the System Clear Switch is set to the “CLEAR” position, you must press the Reset Button with caution, because all data stored in memory will be cleared by the following operation: pressing the Reset Button and setting the System Clear Switch to the “NORMAL” position while the Power Indicator is flashing.

Operation

(A) If the system does not operate properly,
1. Make sure that the System Clear Switch is set to the “NORMAL” position.
2. Press the Reset Button with a pointed tool.

(B) If the system still does not operate properly,
1. Set the System Clear Switch to the “CLEAR” position.
2. Press the Reset Button with a pointed tool.
3. Return the System Clear Switch to the “NORMAL” position while the Power Indicator is flashing (approximately within 10 seconds).

(C) If the system still does not work, switch the power off and on again after five minutes.

(D) If the system still does not work,
1. Switch the power off.
2. Set the System Clear Switch to the “CLEAR” position.
3. Switch the power on.
4. Press the Reset Button with a pointed tool.
5. Set the System Clear Switch to the “NORMAL” position while the Power Indicator is flashing (approximately within 10 seconds).

(E) If the system still does not work, switch the power off. If gel cell batteries are connected to the system, disconnect them, too. Then consult an authorized service person.

When the power supply stops, certain extensions are automatically connected straight to specific CO lines:

- KX-TD816
  Extension (T, R) of jack number 1 .................. CO 1
  Extension (T, R) of jack number 2 .................. CO 2
  Extension (T, R) of jack number 9 .................. CO 5
  Extension (T, R) of jack number 10 ................. CO 6
6.1 Troubleshooting

- KX-TD1232
  Extension (T, R) of jack number 1 ......................... CO 1
  Extension (T, R) of jack number 2 ......................... CO 2
  Extension (T, R) of jack number 9 ......................... CO 3
  Extension (T, R) of jack number 10 ....................... CO 4
  Extension (T, R) of jack number 17 ....................... CO 9
  Extension (T, R) of jack number 18 ....................... CO 10

Connect single line telephones to the above extension jacks.
Digital Super Hybrid System

Digital Super Hybrid System

KX-TD816-1
KX-TD1232-1

Installation Manual
Addendum
Attention

- Keep the unit away from heating appliances and electrical noise generating devices such as fluorescent lamps, motors and television. These noise sources can interfere with the performance of the Digital Super Hybrid System.

- This unit should be kept free of dust, moisture, high temperature (more than 40°C / 104°F) and vibration, and should not be exposed to direct sunlight.

- Never attempt to insert wires, pins, etc. into the vents or other holes of this unit.

- If there is any trouble, disconnect the unit from the telephone line. Plug the telephone directly into the telephone line. If the telephone operates properly, do not reconnect the unit to the line until the trouble has been repaired by an authorized Panasonic Factory Service Center. If the telephone does not operate properly, chances are that the trouble is in the telephone system, and not in the unit.

- Do not use benzine, thinner, or the like, or any abrasive powder to clean the cabinet. Wipe it with a soft cloth.

WARNING: TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE.

The serial number of this product may be found on the label affixed to the bottom of the unit. You should note the serial number of this unit in the space provided and retain this book as a permanent record of your purchase to aid in identification in the event of theft.

MODEL NO.:  
SERIAL NO.:  

Additional Information

If you connect the Panasonic Wireless System (model KX-T336900) to the Digital Super Hybrid System (model KX-TD816, KX-TD1232), the following features do not work with the Wireless System:

- Call Forwarding — Follow Me
- Limited Call Duration
Attention

When you ship the product
Carefully pack and send it prepaid, adequately insured and preferably in the original carton. Attach a postage-paid letter, detailing the symptom, to the outside of the carton. DO NOT send the product to the Executive or Regional Sales offices. They are NOT equipped to make repairs.

Product service
Panasonic Servicenters for this product are listed in the servicenter directory. Consult your authorized Panasonic dealer for detailed instructions.

For your future reference

Important Safety Instructions

When using your telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

1. Read and understand all instructions.
2. Follow all warnings and instructions marked on the product.
3. Unplug this product from the wall outlets before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
4. Do not use this product near water, for example, near a bath tub, wash bowl, kitchen sink, or laundry tub in a wet basement, or near a swimming pool.
5. Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious damage to the product.
6. Slots and openings in the cabinet and the back or bottom are provided for ventilation, to protect it from overheating, these openings must not be blocked or covered. The openings should never be blocked by placing the product on the bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register. This product should not be placed in a built-in installation unless proper ventilation is provided.
7. This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your dealer or local power company.
8. This product is equipped with a three wire grounding type plug, a plug having a third (grounding) pin. This plug will only fit into a grounding type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding type plug.
9. Do not allow anything to rest on the power cord. Do not locate this product where the cord will be abused by people walking on it.
Important Safety Instructions

10. Do not overload wall outlets and extension cords as this can result in the risk of fire or electric shock.

11. Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.

12. To reduce the risk of electric shock, do not disassemble this product, but take it to a qualified serviceman when some service or repair work is required. Opening or removing covers may expose you to dangerous voltages or other risks. Incorrect reassembly can cause electric shock when the appliance is subsequently used.

13. Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
   A. When the power supply cord or plug is damaged or frayed.
   B. If liquid has been spilled into the product.
   C. If the product has been exposed to rain or water.
   D. If the product does not operate normally by following the operating instructions. Adjust only those controls, that are covered by the operating instructions because improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
   E. If the product has been dropped or the cabinet has been damaged.
   F. If the product exhibits a distinct change in performance.

14. Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.

15. Do not use the telephone to report a gas leak in the vicinity of the leak.

SAVE THESE INSTRUCTIONS
Telephone Company and F.C.C.
Requirements and Responsibilities

1. Notification to the Telephone Company

Customers, before connecting terminal equipment to the telephone network, shall upon request of the Telephone Company, inform the Telephone Company of the particular line(s) to which such connection is made, the F.C.C. registration number (see the label on the bottom of the unit) and ringer equivalence number (REN) of the registered terminal equipment.

The REN is useful in determining the quantity of devices you may connect to your telephone line and still have all of those devices ring when your telephone number is called. In most, but not all areas, the sum of the REN's of all devices connected to one line should not exceed five (5.0). To be certain of the number of devices you may connect to your line, as determined by the REN, you should contact your local telephone company to determine the maximum REN for your calling area.

2. Connection to Telephone Line

This unit must not be connected to a coin operated line. If you are on a party line, check with your local telephone company.

3. Incidence of Harm to the Telephone Lines

Should terminal equipment cause harm to the telephone network, the telephone company shall, where practical, notify the customer that temporary discontinuance of service may be required.

However, where prior notice is not practical, the telephone company may temporarily discontinue service forthwith, if such action is reasonable in the circumstances. In case of such unnotified temporary discontinuance of service, the telephone company shall:

(a) Promptly notify the customer of such temporary discontinuance of service.
(b) Afford the customer the opportunity to correct the situation which gave rise to the temporary discontinuance.
(c) Inform the customer of the right to bring a complaint to the Federal Communication Commission pursuant to the procedures set out in Subpart E of Part 68 of FCC Telephone Equipment Rules.

4. Compatibility of the Telephone Network and Terminal Equipment

(a) Availability of telephone interface information.

Technical information concerning interface parameters and specifications not specified in FCC Rules, including the number of Ringers which may be connected to a particular telephone line, which is needed to permit Terminal Equipment to operate in a manner compatible with Telephone Company communications facilities, shall be provided by the Telephone Company upon customer's request.

The Telephone Company may make changes in its communications facilities, equipment, operations or procedures, where such action is reasonably required in the operation of its business and is not inconsistent with the rules and regulations in FCC Part 68.

If such changes can be reasonably expected to render any customer Terminal Equipment incompatible with Telephone Company Communications Facilities, or require modification or alteration of such Terminal Equipment, or otherwise materially affect its use or performance, the customer shall be given adequate notice in writing, to allow the customer an opportunity to maintain uninterrupted service.

Notify the Telephone Company

Installation must be performed by a qualified professional installer.

Before connecting this equipment to any telephone, call the telephone company and inform them of the following:

- Telephone numbers to which the system will be connected 
- Make ...................................................... Panasonic
- Model ...................................................... KX-TD816/
  KX-TD1232
- FCC Registration No. ....................................... found on the bottom of the unit
- Ringer Equivalence No. ..................................... 0.4B
- Facility Interface Code .................................... 02LS2
- Service Order Code ....................................... 9.0F
- Required Network Interface Jack .......................... RJ 14C

Note:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this device.

When programming emergency numbers and/or making test calls to emergency numbers:

1. Remain on the line and briefly explain to the dispatcher the reason for the call before hanging up.
2. Perform such activities in the off-peak hours, such as early morning hours or late evenings.
Introduction

This Installation Manual provides technical information for the Panasonic Digital Super Hybrid System, KX-TD816/KX-TD1232. It is designed to serve as an overall technical reference for the system and includes a description of the system, its hardware and software, features and services and environmental requirements.

This manual contains the following sections:

Section 1, System Outline.
Provides general information on the system including system capacity and specifications.

Section 2, Installation.
Contains the basic system installation and wiring instructions, as well as how to install the optional cards and units.

Section 3, Features.
Describes all the basic, optional and programmable features in alphabetical order. It also provides information about the programming required, conditions, connection references, related features and operation for every feature.

Section 4, System Programming.
Provides step-by-step programming instructions for a proprietary telephone.

Section 5, List.
Lists tone/ring tone and default values of system programming.

Section 6, Troubleshooting.
Provides information for system and telephone troubleshooting.

NOTE
The following documents may be used in conjunction with this manual:
- Programming Table
  The programming table is designed to be used as a hard copy reference to the user-programmed data.

Live Call Screening (LCS)

Log-In / Log-Out

Description
Assigns an extension to join (log-in) or leave (log-out) a hunting or UCD group. Extensions in log-out status will not receive calls by Station Hunting but will receive other calls, unlike the DND feature.

Conditions
• There should be at least one extension that is in log-in status.
• The lighting patterns and status of the Log-In/Log-Out button are shown below.

<table>
<thead>
<tr>
<th>lighting pattern</th>
<th>CO Line Status</th>
</tr>
</thead>

Log-In / Log-Out
Phantom Extension

Description
Allows the system to route the calls to a phantom extension. The call to a phantom extension arrives at the extension who has the corresponding Phantom button. A phantom button can be assigned by Station Programming.

Conditions
- Types of calls whose destination can be the phantom extension are:
  Outside calls – DIL 1:1; DISA; IRNA; UCD-Overflow
  Intercom calls – Extension; Transfer
- You can call the phantom extension by pressing the Phantom button or by dialing the phantom extension number. If several extensions have the same phantom extension number, they will ring simultaneously.
- A phantom number must be assigned by System Programming before assigning the Phantom button by Station Programming.
- There is a maximum of 128 phantom numbers. Each number has two to four digits, consisting of numbers 0 through 9.
- The phantom number cannot be used for feature settings such as Call Forwarding.
- The lighting patterns and status of the Phantom button are shown below.

<table>
<thead>
<tr>
<th>lighting pattern</th>
<th>Phantom Extension Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Idle</td>
</tr>
<tr>
<td>Red on</td>
<td>Calling a phantom extension</td>
</tr>
<tr>
<td>Green rapid flash</td>
<td>Incoming call</td>
</tr>
</tbody>
</table>
- A DSS button can be assigned as the Phantom button so that the operator can use the button for transferring a call.

Phantom Extension
3 Features

Quick Dialing

Description
Quick Dialing offers the extension user one-touch access to a desired party. This is enabled by storing an extension number or a telephone number up to 16-digits as a quick dial number.

Conditions
• Up to eight quick dial numbers can be stored.
• For example, Quick Dialing is convenient for room service calls in a hotel.
• You must assign a feature number first in program [100] “Flexible Numbering,” and then a quick dial number in program [009] “Quick Dial Number Set” in order for Quick Dial to be effective.

Example: If you want to assign the extension number 101 in quick dial number 3:
1) Change or clear the feature numbers which have “3” in the first digit in program [100].
2) Assign “3” in the selection number 63 (Quick dial number 1) in program [100].
3) Assign “101” in a quick dial number 1 (same location number as the quick dial number 1 in program [100]) in program [009].

Now you can dial the quick dial number 3 to call extension 101.

Quick Dialing
### Ring Group

**Description**

All extensions in a ring group ring simultaneously by dialing the floating number of the extension group. A ring group can be a Station Hunting type.

**Conditions**

- Types of calls whose destination can be the ring group are:
  - Outside calls – DIL 1:1; DISA; IRNA; UCD-Overflow
  - Intercom calls – Extension; Transfer
- The floating number of the extension group is used for all other hunting types, Circular, Termination, Voice Mail (VM), Automated Attendant (AA) and Uniform Call Distribution (UCD).

3  Features

SMDR for Caller ID

Description
Station Message Detail Recording (SMDR) automatically records detailed call information in the following cases:

A) When an incoming call occurs.
B) When an incoming call is answered by an extension.
C) When an incoming call is cancelled because nobody answered the call.

If CO lines receive a Caller ID service call, SMDR records the number (11 digits max.) and / or the name (10 characters max.).

“Ring” in the SMDR printout format indicates the ring duration of the incoming call in Minutes / Seconds.

An example of a printed call record:

<table>
<thead>
<tr>
<th>Date</th>
<th>Time</th>
<th>Ext</th>
<th>CO</th>
<th>Dial Number</th>
<th>Ring</th>
<th>Duration</th>
<th>Acc code</th>
<th>CD</th>
</tr>
</thead>
<tbody>
<tr>
<td>A)</td>
<td>06/24/96</td>
<td>103</td>
<td>03</td>
<td>&lt;l&gt; 1234567890</td>
<td></td>
<td></td>
<td></td>
<td>RC</td>
</tr>
<tr>
<td>B)</td>
<td>06/24/96</td>
<td>103</td>
<td>03</td>
<td>&lt;l&gt; 0924312111</td>
<td>0'20</td>
<td></td>
<td></td>
<td>AN</td>
</tr>
<tr>
<td>C)</td>
<td>06/24/96</td>
<td>103</td>
<td>03</td>
<td>&lt;l&gt; 10222220</td>
<td>0'45</td>
<td></td>
<td></td>
<td>NA</td>
</tr>
</tbody>
</table>

Explanation
A) An incoming call with Caller ID from CO line 3 appears. “RC” is the Condition Code for “Receive.”
B) An incoming call with Caller ID from CO line 3 is answered by extension 103. It took 20 seconds to answer the call. “AN” is the Condition Code for “Answer.”
C) An incoming call with Caller ID from CO line 3 cancelled because nobody answered the call within 45 seconds. “NA” is the Condition Code for “No Answer.”

Conditions
- Connect a printer provided with an EIA (RS-232C) interface to the EIA (RS-232C) connector located on the main unit.
- It is possible to select whether the SMDR prints out received incoming calls (RC) and answered incoming calls (AN) information.

3 Features

SMDR for Timed Reminder

Description
Station Message Detail Recording (SMDR) automatically records detailed Timed Reminder information. It is printed out when the Timed Reminder starts and the alarm is not answered. To enable the printout, refer to the program [990] “System Additional Information, Field (45),” which allows you to print out the following records:
- Date
- Time
- Extension number
- Start / No Answer

An example of a printed Timed Reminder record:

<table>
<thead>
<tr>
<th>Date</th>
<th>Time</th>
<th>Ext</th>
<th>CO</th>
<th>Dial Number</th>
<th>Ring</th>
<th>Duration</th>
<th>Acc code</th>
<th>CD</th>
</tr>
</thead>
<tbody>
<tr>
<td>06/24/96</td>
<td>10:03AM</td>
<td>103</td>
<td></td>
<td>Timed Reminder</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>06/24/96</td>
<td>10:04AM</td>
<td>103</td>
<td></td>
<td>Timed Reminder</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Conditions
Connect a printer provided with an EIA (RS-232C) interface to the EIA (RS-232C) connector located on the main unit.

System Working Report

Description
The Digital Super Hybrid System automatically records the system's working status condition. A printer connected to the EIA (RS-232C) port can be used to print the recorded data. The recorded data can be printed out by the operator or manager.

Recorded contents are as follows:
1. Date of record
   - The date and time when cleared
   - The date and time when printed out
2. Incoming calls
   - The number of incoming calls
   - The number of answered incoming calls
   - The ratio of answered calls to incoming calls
     \[
     \frac{\text{Number of answered calls}}{\text{Number of incoming calls}} \times 100 \, (\%)
     \]
   - The average time from receipt of call to answer of the incoming and answered calls
   - The average talk duration of the answered calls
3. Outgoing calls
   - The number of access requested
   - The number of access succeeded
   - The ratio of access succeeded
     \[
     \frac{\text{Number of access succeeded}}{\text{Number of access requested}} \times 100 \, (\%)
     \]
   - The average duration of the dialed calls

These records can be deleted by the operator or manager and new data will be recorded thereafter.

Conditions
- Connect a printer provided with an EIA (RS-232C) connector to the main unit.
- Referring and deleting the system working report can be done using an EIA/remote programming software.

Operator / Manager Service Features,
System Working Report
Timed Reminder, Remote (Wake-Up Call)

Description
Allows the operator and manager to remotely set, cancel and confirm the wake-up call for an extension.

Conditions
- When either an operator/manager or the extension sets a new time, the pre-set time is cleared.
- SMDR automatically records the detailed Timed Reminder information. It is printed out when the Timed Reminder starts and the alarm is not answered.

Features

Two-Way Recording into Voice Mailbox*

Description
Allows the proprietary telephone user to record the conversation into one's mailbox or another mailbox, while talking on the phone.

Note:
When you record Two-Way telephone conversations, you should inform the other party that the conversation is being recorded.

Conditions
- A flexible CO and DSS button can be assigned as a Two-Way Record button or a Two-Way Transfer button.
- When all of the voice mail ports are busy, pressing the Two-Way Record button sends an alarm tone.
- When all of the voice mail ports are busy, pressing the Two-Way Transfer button followed by an extension number sends an alarm tone.

Two-Way Recording into Voice Mailbox

Uniform Call Distribution (UCD)

Description
Allows incoming calls to be distributed uniformly to a specific group of extensions called an UCD group. Calls to an UCD group hunt for an idle station in a circular way. This UCD feature is particularly helpful when a certain extension receives a high volume of calls compared with other extensions.

If all extensions in an UCD group are busy or not available, the incoming outside call will be handled by the UCD Time Table.

*: Available when the Digital Super Hybrid System is connected to a Digital Proprietary Telephone capable Panasonic Voice Processing System (one that supports digital proprietary telephone integration; e.g., KX-TVS100).
An outline sketch of an UCD is shown below.

(1) When a number of calls have arrived at an UCD group, the 1st call arrives at extension A first.

(2) When the 1st call arrives at extension A, the 2nd call arrives at extension B.

(3) When the 2nd call arrives at extension C, the 3rd call will arrive at extension A.
3 Features

(4) When all extensions in an UCD group are busy or not available, the incoming outside call will be handled by the UCD Time Table.
An example is shown below.

UCD Time Table Assignment

<table>
<thead>
<tr>
<th>UCD</th>
<th>FN</th>
<th>OFN</th>
<th>TT</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>191</td>
<td>101</td>
<td>1</td>
</tr>
<tr>

</tr>
<tr>
<td>7</td>
<td>293</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8</td>
<td>294</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

UCD: UCD Group Number (1 – 8)
FN: Floating Number of the UCD Group
OFN: Overflow Extension Number
TT: Time Table Number (1 – 4)

Sequence Assignment

<table>
<thead>
<tr>
<th>TT</th>
<th>SEQUENCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>S1 → 4T → 4T → TR</td>
</tr>
<tr>
<td>2</td>
<td>S1 → 2T →</td>
</tr>
<tr>
<td>3</td>
<td>S4 → RT →</td>
</tr>
<tr>
<td>4</td>
<td>TR →</td>
</tr>
</tbody>
</table>

S1: Send OGM 1
S2: Send OGM 2
S3: Send OGM 3
S4: Send OGM 4
TR: Transfer to overflow extension
RT: Return to top
Blank: Disconnect the line
1T: Timer – 16 seconds
2T: Timer – 32 seconds
3T: Timer – 48 seconds
4T: Timer – 64 seconds

Sequence Activation Examples
☐ S4 → → → →: Sends OGM 4 and then disconnects the line.
☐ S4 → TR → n/a → n/a → n/a: Sends OGM 4 and then transfers to an overflow extension.
☐ S4 → 1T → → →: Sends OGM 4, Music on Hold for 16 seconds and then disconnects the line.
☐ S1 → S2 → S3 → →: Sends OGM 1, OGM 2, OGM 3 and then disconnects the line.
☐ S4 → 1T → S1 → →: Sends OGM 4, Music on Hold for 16 seconds, OGM 1 and then disconnects the line.
☐ S4 → 1T → 4T → RT → n/a: Sends OGM 4, Music on Hold for 16 + 64 seconds and then OGM 4 again.
☐ S4 → RT → n/a → n/a → n/a: Sends OGM 4 repeatedly.
☐ TR → n/a → n/a → n/a →: Directly transfers to an overflow extension.
☐ RT → n/a → n/a → n/a →: Waits for an idle extension. The caller hears a ringback tone. (IRNA works.)
☐ → n/a → n/a → n/a →: Waits for an idle extension. The caller hears a ringback tone. (IRNA works.)
☐ 1T → → → →: Waits for an idle extension. The caller hears a ringback tone. (IRNA does not work.)
☐ 1T → RT → n/a → n/a →: Waits for an idle extension. The caller hears a ringback tone. (IRNA does not work.)
☐ 1T → TR → n/a → n/a →: Waits for an idle extension for 16 seconds and then transfers to an overflow extension.

* n/a: not available for assignment.
Note:
- The UCD Time Table is not available for incoming extensions or transferred calls.
- If the overflow extension or Time Table number is not assigned, the system does not answer the call and waits for any extension to be idle. In this case, IRNA will be employed.
- If the system sends the OGM after queuing, the OGM answering time is subject to the time assigned in program [213] "DISA Delayed Answer Time."
- Dialing is disregarded during an OGM.
- In sequence assignment, "Sx" can be assigned in a space other than the first only when another "Sx" is assigned in the first space.
- In sequence assignment, an assignment after "TR," "RT" or "Blank" is not available.
- An OGM is only available for KX-TD1232.
- If a timer is the first item in a Time Table sequence, it will delay answering according to the Timer's time setting. The caller will hear a ringback tone.
- Music on Hold after an OGM can be changed to a ringback tone by program [990] "System Additional Information, Field (1)."

Conditions

- UCD can be used in the following cases:
  a) The floating number of UCD is assigned as the DIL 1:1 destination.
  b) The floating number of UCD is assigned as the Intercept Routing destination.
  c) The floating number of UCD is dialed from an extension.
  d) The floating number of UCD is dialed from DISA.
  e) The floating number of UCD is assigned as the UCD Overflow destination.
- This feature requires assignment of an UCD group in System Programming. An extension cannot belong to two or more UCD groups.
- The floating number can be assigned on an UCD group basis. The UCD group is based on the extension group.
- It is possible to set the log-in or log-out status on an extension basis. An UCD call can arrive at an extension in log-in status within the UCD group, but cannot arrive at extensions in log-out status. If the extension would like to leave the group temporarily, the extension sets the log-out status by the feature number to prevent UCD calls being sent to their extensions. When the extension re-joins the group, the extension sets the log-in status.
- There should be at least one extension that is in log-in status.

Voice Mail Integration for Digital Proprietary Telephones*

**Description**
A Digital Proprietary Telephone capable Panasonic Voice Processing System can be connected to a Digital Super Hybrid System (DSHS) in a tightly integrated fashion. The system sends the VPS data which contains the extension number configuration information and the VPS automatically creates mailboxes with this data (Automatic Configuration — Quick Setup).

**Conditions**
- A maximum of one VPS can be connected to each DSHS cabinet.
- A maximum of four DSHS jacks can be connected to a digital proprietary telephone capable VPS. Because a digital proprietary telephone connection supports up to two simultaneous voice calls, only one DSHS jack needs to be connected for every two VPS ports.
- Connect the jacks and ports in ascending order. In other words, the lowest number DSHS jack used for VPS connection must be connected to the lowest number VPS port.
- The VPS data is transmitted to the VPS via the lowest jack port.

4.2 Manager Programming

Date and Time Set

Description
Sets the current date and time. A 12 hour clock or 24 hour clock can be selected.

Selection
• Year: 00 through 99
• Month: Jan. through Dec.
• Day: 1 through 31
• Day of the week. SUN / MON / TUE / WED / THU / FRI / SAT
• Hour: 1 through 12
• Minute: 00 through 59
• AM / PM
• Clock hour: 12 or 24

Default
'93 Jan. 1 FRI 12:00 AM 12

Programming

1. Enter 000.
   Display: 000 DATE / TIME

2. Press NEXT.
   Display example: '93 Jan. 1 FRI

3. Enter the year.
   To change the current entry, press CLEAR and enter the new year.

4. Press ➔.

5. Keep pressing SELECT until the desired month is displayed.

6. Press ➔.

7. Enter the day.
   To change the current entry, press CLEAR and enter the new day.

8. Press ➔.

9. Keep pressing SELECT until the desired day of the week is displayed.

10. Press STORE.

11. Press NEXT.
   Display example: 12:00 PM 24
4.2 Manager Programming

Date and Time Set (contd.)

12. Enter the hour.
    To change the current entry, press CLEAR and enter the new hour.

13. Press ➔.

14. Enter the minute.
    To change the current entry, press CLEAR and enter the new minute.

15. Press ➔.

16. Press SELECT for AM or PM.

17. Press ➔.

18. Press SELECT for 12 or 24 (clock hour).

19. Press STORE.

20. Press END.

Conditions

- After changing an entry, you can press STORE. You do not have to perform the rest of the steps.
- To go back to a previous field, press ⇪ in steps 4 through 9 and steps 13 through 18.
- If you hear an alarm after pressing STORE, check that the date is valid.
- The clock starts immediately after the STORE button is pressed.
- You cannot leave an entry empty.
- Program [990] "System Additional Information, Field (30)" is used to enable the automatic time adjustment by Caller ID information once a day.

Quick Dial Number Set

Description
Stores up to eight quick dial numbers.

Selection
• Quick dial number: 1 through 8
• desired number: 16 digits (max.)

Default
All quick dial numbers – Not stored

Programming
1. Enter 009.
   Display: 009 QUICK DIAL

2. Press NEXT.
   Display: Location NO?+

3. Enter a quick dial number.
   To enter location number 1, you can also press NEXT.
   Display example: 1: Not Stored

4. Enter a desired number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and enter the new number.

5. Press STORE.

6. To program another location, press NEXT or PREV, or
   SELECT and the desired location number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
• There is maximum of eight quick dial numbers. A maximum of sixteen
digits, consisting of 0 through 9, can be assigned to a quick dial
number.
• Before programming this program, assign a feature number for each
location first in program [100] “Flexible Numbering.”

4.3 System Programming

Station Hunting Type

Description
Used to enable or disable hunting and set the Station Hunting type for each extension group. There are six Station Hunting types available: Circular, Termination, Voice Mail (VM), Automated Attendant (AA), Ring Group and Uniform Call Distribution (UCD). If circular hunting is assigned for a group, all the extensions in the group are hunted until an idle one is found. If termination hunting is assigned, hunting stops at the extension which has the largest jack number in the group. If VM hunting is assigned, all the VM ports of an extension group are hunted until an idle one is found which permits Voice Mail Service. If AA hunting is assigned, all the AA ports of an extension group are hunted until an idle one is found which permits AA Service. If Ring Group is assigned, all the extensions in the ring group ring simultaneously. If UCD is assigned, group members are hunted in a circular way.

Selection
- Extension group number: 1 through 8, * (※=all extension groups)
- Disable (no hunting) / Terminate (termination) / Circular / VM (voice mail) / AA (automated attendant) / RING / UCD

Default
All extension groups – Disable

Programming
1. Enter 106.
Display: 106 STATION HUNT

2. Press NEXT.
Display: EXT GRP NO?

3. Enter an extension group number.
To enter extension group number 1, you can also press NEXT.
Display example: Group1: Disable

4. Keep pressing SELECT until the desired selection is displayed.

5. Press STORE.

6. To program another extension group, press NEXT or PREV, or SELECT and the desired extension group number.

7. Repeat steps 4 through 6.

8. Press END.
4.3 System Programming

Station Hunting Type (contd.)

Conditions

- Program [602] “Extension Group Assignment” is used to assign the extension group members.
- The system supports a maximum of eight jacks (16 jacks during System Connection for KX-TD1232) for connection to a Voice Processing System as VM or AA ports.

Automatic Hold by CO / DSS Button

Description
Enables or disables automatically holding a CO call when a DSS button on the DSS Console or proprietary telephone, or a CO button on a proprietary telephone is pressed. Through this assignment, each button acts as follows:
- Pressing the DSS button holds a CO call and quickly transfers it to an extension without pressing the TRANSFER button.
- Pressing another CO button holds the current CO call.

Selection
- Button: DSS or CO
- Enable / Disable

Default
DSS button — Enable. CO button — Disable

Programming
1. Enter 108.
Display: 108 AUTO HOLD

2. Press NEXT to program the DSS button.
Display example: DSS XFER:Enable

3. Keep pressing SELECT until the desired selection is displayed.

4. Press NEXT to program the CO button.
Display example: CO Hold:Disable

5. Keep pressing SELECT until the desired selection is displayed.

6. Press STORE.

7. Press END.

Conditions
This assignment applies to all DSS and CO buttons on all DSS Consoles and proprietary telephones in the system.

#### Expansion Unit Type

<table>
<thead>
<tr>
<th>Description</th>
<th>Assigns the type of expansion units to be used in the system. This allows the system to identify the unit in each expansion unit location.</th>
</tr>
</thead>
</table>
| Selection   | KX-TD816  
- Areas 1; 2 = C/D/E/A  
  (C: 4-CO Line Unit / E: 8-Station Line Unit / A, D: no use)  
KX-TD1232  
- Master/Slave  
- Areas 1; 2; 3 = C/D/E1/E2/A1/A2  
  (C: 4-CO Line Unit / E1: 8-Station Line Unit 1 / E2: 8-Station Line Unit 2 / A1, A2, D: no use) |
| Default     | KX-TD816: C;E  
KX-TD1232: Master and Slave – C;E1;E2 |
| Programming | KX-TD816  
1. Enter 109.  
   Display: 109 EXPAND C, E1  
2. Press NEXT.  
   Display example: Master:C ;E  
3. Keep pressing SELECT until the desired selection of Area 1 is displayed.  
4. Press to program Area 2, if required.  
5. Keep pressing SELECT until the desired selection of the Area 2 is displayed.  
6. Press STORE.  
7. Press END.  
KX-TD1232  
1. Enter 109.  
   Display: 109 EXPAND C, E1  
2. Press NEXT to program the Master System. |
4.3 System Programming

Expansion Unit Type (contd.)

To program “Slave,” press NEXT again.
Display example: Master: C ; E1; E2

3. Keep pressing SELECT until the desired selection of Area 1 is displayed.

4. Press → to program another Area, if required.

5. Keep pressing SELECT until the desired selection of the Area is displayed.

6. Repeat steps 4 and 5 until all the required entries are completed, if required.

7. Press STORE.
   If only one system is in operation, go to step 10.

8. Press NEXT to program the Slave System.
   Display example: Slave : C ; E1; E2

9. Repeat steps 3 through 7, if required.

10. Press END.

Conditions

- There are two expansion areas in KX-TD816, areas 1 and 2 from bottom to top. One 8-Station Line Unit and one 4-CO Line Unit can be installed.
- There are three expansion areas in each system for KX-TD1232, areas 1, 2 and 3 from bottom to top. Up to two 8-Station Line Units and one 4-CO Line Unit can be installed in each system.
- An out-of-service system is unassignable. In this case, skip steps 8 and 9 for KX-TD1232.
- In the case of KX-TD1232, if only the Slave System is in operation, the display shows “Slave” in step 2.
- After changing the setting, turn the Power Switch off and on once. Otherwise, the previous setting will remain.

Voice Mail Number Assignment *

Description
Assigns the jack number corresponding to the voice mail port for data transmission to the Voice Processing System. The voice mail port is expandable to four ports (8 ports during System Connection for KX-TD1232).

Selection
KX-TD816
• Jack number: 02 through 16
KX-TD1232
• Master / Slave
• Jack number: 02 through 32 / Master; 33 through 64 / Slave

Default
All jacks — Blank

Programming
KX-TD816
1. Enter 117.
   Display: 117 VMS PORT ASN
2. Press NEXT.
   Display example: M:# # # #
3. Enter a jack number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and enter the new jack number.
4. Press \(\rightarrow\) to enter another jack number.
5. Repeat steps 3 through 4 to enter another jack number.
6. Press STORE.
7. Press END.

KX-TD1232
1. Enter 117.
   Display: 117 VMS PORT ASN
2. Press NEXT to program the Master System.
   To program “Slave,” press NEXT again.
   Display example: M:# # # #

*: Available when the Digital Super Hybrid System is connected to a Digital Proprietary Telephone capable Panasonic Voice Processing System (one that supports digital proprietary telephone integration: e.g. KX-TVS100).
3. Enter a jack number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and enter the new jack number.

4. Press ➔ to enter another jack number.

5. Repeat steps 3 through 4 to enter another jack number.

6. Press STORE.

7. Press NEXT to program the Slave System.
   Display example: S: # # # #

8. Repeat steps 3 through 4 to enter another jack numbers.

9. Press END.

**Conditions**

- Neither Jack number 01 nor the manager extension can be assigned as a voice mail port jack. The voice mail port jack cannot be assigned to a manager extension.
- The jack numbers correspond to the voice mail port in numerical order. Example: Stored jack numbers: Jacks 02, 03, 05, 08
  Jack 02=Voice mail numbers 01, 02; Jack 03= Voice mail numbers 03, 04; Jack 05=Voice mail numbers 05, 06; Jack 08=Voice mail numbers 07, 08

**Feature References**

None
Voice Mail Extension Number Assignment *

Description
Assigns the extension number for the voice mail number. These numbers can be used the same way extension numbers are used for station access.

Selection
- Voice mail number: 01 through 16
- Extension Number: 2 through 4 digits

Default
- VM-01-165, VM-02-166, VM-03-167, VM-04-168, VM-05-169, VM-06-170, VM-07-177, VM-08-178, VM-09-171, VM-10-172, VM-11-173, VM-12-174, VM-13-175, VM-14-176, VM-15-179, VM-16-180

Programming
1. Enter 118.
   Display: 118 VM EXT #

2. Press NEXT.
   Display: VM NO?→

3. Enter a voice mail number.
   To enter voice mail number 01, you can also press NEXT.
   Display: VM-01:#02-1:165

4. Enter an extension number.
   To change the current entry, press CLEAR and enter the new number.

5. Press STORE.

6. To program another voice mail number, press NEXT or PREV, or SELECT and the desired voice mail number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
- You cannot leave an entry empty.
- Double entries and incompatible entries for extension numbers are invalid.
- The display shows "VM-XX:#YY-1:ZZZ" in step 3.
  "XX" means the voice mail number.
  "YY" means the jack number of the voice mail port programmed in [117].
  "-1" of YY-1 means the first part of jack number in digital line.
  YY-2 means the second number of the jack number in digital line.

*Voice Mail Extension Group Assignment*

**Description**
Assigns each voice mail number to a voice mail extension group number.

**Selection**
- Voice mail number (VM): 01 through 16, *
  
  (* - all voice mail number)
- Voice mail extension group number (EXG) = 1 through 8

**Default**
All voice mail numbers = EXG 1

**Programming**

1. Enter 119.
   
   Display: 119 VM EXT GROUP

2. Press NEXT.
   
   Display: VM NO?→

3. Enter a voice mail number.
   
   To enter voice mail number 01, you can also press NEXT.
   
   Display example: VM-01:#02-1:EXG1

4. Enter the voice mail extension group number.
   
   To delete the current entry, press CLEAR.
   
   To change the current entry, enter the new number.

5. Press STORE.

6. To program another voice mail number, press NEXT or PREV, or SELECT and the desired voice processing mail number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
- The display shows "VM-XX,#YY-1.EXG Z" in step 3.
  
  "XX" means a voice mail number.
  
  "YY" means the jack number of the voice mail port programmed in [117].
  
  "-1" of YY-1 means the first part of jack number in digital line.
  
  "YY-2" means the second part of the jack number in digital line.

4.3 System Programming

User Password

Description
Assigns the password required for entering the User Programming mode.
In the User Programming Mode, any display digital proprietary telephone user in the system can set the following programs:

- [000] Date and Time Set
- [001] System Speed Dialing Number Set
- [002] System Speed Dialing Name Set
- [003] Extension Number Set
- [004] Extension Name Set
- [005] Flexible CO Button Assignment
- [006] Operator/Manager Extension Assignment
- [007] DSS Console Port And Paired Telephone Assignment
- [008] Absent Messages
- [009] Quick Dial Number Set

Selection
Password: 4 through 7 digits

Default
1234

Programming
1. Enter 120.
   Display: 120 USR PASSWORD
2. Press NEXT.
   Display example: Password:1234
3. Enter a password.
   To change the current entry, press CLEAR and enter the new password.
4. Press STORE.
5. Press END.

Conditions
- The password can be from four to seven digits long. Valid numbers are from 0 to 9.
- If less than four digits are entered, they will not be stored.
- You cannot leave the entry empty.

Feature References
None
4.3 System Programming

Walking COS Password

Description
Assigns the password required for Walking COS.

Selection
Password: 4 through 7 digits

Default
1234

Programming
1. Enter 121.
   Display: 121 COS PASSWORD

2. Press NEXT.
   Display example: Password:1234

3. Enter a password.
   To change the current entry, press CLEAR and enter the new password.

4. Press STORE.

5. Press END.

Conditions
- The password can be from four to seven digits long. Valid numbers are from 0 to 9.
- If less than four digits are entered, they will not be stored.
- You cannot leave the entry empty.

Feature References

4.3 System Programming

**UCD Overflow**

**Description**
Assigns the destination where the call is transferred to when all extensions in the UCD group are busy. The Time Table number of the overflow extension must also be assigned.

**Selection**
- UCD group number: 1 through 8
- Overflow extension number: 2 through 4 digits
- Time table number: 1 through 4

**Default**
All UCD groups — Not stored

**Programming**

1. Enter 122.
   
   Display: 122 UCD OVERFLOW

2. Press NEXT.
   
   Display: UCD No?+

3. Enter a UCD group number.
   
   To enter UCD group number 1, you can also press NEXT.
   
   Display example: UCD1:,TT:

4. Enter a overflow extension number.
   
   Display example: UCD1:102,TT:

5. Press → .

4. Enter a time table number.
   
   Display example: UCD1:102,TT:1

5. Press STORE.

5. Press END.

**Conditions**
If the overflow extension or Time Table number is not assigned, the system does not answer the call and waits for any extension to be idle. In this case, IRNA will be employed.

**Feature Reference**
Section 3, Features,
Uniform Call Distribution (UCD)
4.3 System Programming

UCD Time Table

Description
Assigns the queuing sequence in the UCD time table. The queuing sequences are as follows:

*S1*: Sends DISA outgoing message 1  
*S2*: Sends DISA outgoing message 2  
*S3*: Sends DISA outgoing message 3  
*S4*: Sends DISA outgoing message 4  
*TR*: Transfers to the overflow extension  
*RT*: Returns to the top of the sequence  
*Blank*: Disconnects  
*1T*: Timer — 16 seconds  
*2T*: Timer — 32 seconds  
*3T*: Timer — 48 seconds  
*4T*: Timer — 64 seconds

Selection
- Time table number: 1 through 4  
- S1 / S2 / S3 / S4 / TR / RT / 1T / 2T / 3T / 4T / Blank

Default
All time tables — Not stored

Programming
1. Enter 123.  
Display: 123 UCD T.TABLE
2. Press NEXT.  
Display: Table No.?→
3. Enter a time table number.  
To enter time table number 1, you can also press NEXT.  
Display example: 1: → → → →
4. Keep pressing SELECT until the desired selection is displayed.  
Display example: 1:S4→ → → →
5. Press →.  
6. Repeat steps 4 and 5.
4. Press STORE.
5. Press END.

Conditions
- “Sx” can be assigned in a space other than in the first only when another “Sx” is assigned in the first space.  
- An assignment after “TR,” “RT” or “Blank” is not available.

Feature Reference
Section 3, Features,  
Uniform Call Distribution (UCD)

*: Available for KX-TD1232 only.
Phantom Extension Number Assignment

Description
Assigns the phantom numbers. Each number will be assigned to a flexible CO or DSS button and used as a Phantom button.

Selection
- Location number: 001 through 128
- Phantom number: 2 through 4 digits

Default
All locations – Not stored

Programming
1. Enter 124.
   Display: 124 PHANTOM #
2. Press NEXT.
   Display: Location NO?
3. Enter a location number.
   To enter location number 001, you can also press NEXT.
   Display example: 001: Not Stored
4. Enter a phantom number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and enter the new number.
5. Press STORE.
6. To program another location, press NEXT or PREV, or SELECT and the desired location number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- There is a maximum of 128 phantom numbers. Each number has two to four digits, consisting of numbers 0 through 9.
- The first one or two digits of the phantom extension numbers are subject to program [100] “Flexible Numbering, (01) through (16) 1st through 16th hundred extension blocks.”
- Phantom extension numbers and other extension numbers should be unique. Double entry and incompatible entry for these numbers are invalid. Valid entry example: 10 and 11, 10 and 110; Invalid entry example: 10 and 106, 210 and 21.
- In order not to make an invalid entry, check the other extension numbers in programs [003] “Extension Number Set,” [118] “VM Extension Number Assignment” and [813] “Floating Number Assignment.”

Area Code Assignment

Description
Assigns the area code which is necessary when using the Caller ID feature. By assigning your area code, the system records the caller's phone number modified by programs [126] "Caller ID Modification for Local Call" and [127] "Caller ID Modification for long distance call."

Selection
Area code: 1 through 6 digits

Default
Blank

Programming
1. Enter 125.
   Display: 125 AREA CODE
2. Press NEXT.
   Display example: Area Code:201
3. Enter an area code.
   To change the current entry, press CLEAR and enter the new area code.
4. Press STORE.
5. Press END.

Conditions
The area code can be six digits long. Valid numbers are from 0 to 9.

Feature Reference
Section 3, Features,
Caller ID
CO Incoming Call Information Log
Assigns removed digits from the received caller's number of a local call, and adds number to make the final number which serves as the Caller ID number. The system records the modified caller's number to the incoming call log list so that the extension user can call back the caller. Digits are removed from or added to the beginning of the received digits.

**Selection**
- Number of digits to be deleted: 0 through 9 (0=no deleting)
- Number to be added: 4 digits (max.)

**Default**
Deleted number – 3; Added number – blank

**Programming**
1. Enter 126.
   Display: 126 CID LOCAL
2. Press NEXT.
   Display example: Del,Add:3,
3. Enter the number of digits to be deleted.
   To change the current entry, press CLEAR and enter the new number.
4. Press → to program the number to be added, if required.
5. Enter the number to be added.
   To change the current entry, press CLEAR and enter the new number.
6. Press STORE.
7. Press END.

**Conditions**
The added number has a maximum of 4 digits, consisting of 0 through 9, * and #.

Caller ID Modification for Long Distance Call

Description

Assigns removed digits from the received caller's number of a long distance call, and adds number to make the final number which serves as the Caller ID number. The system records the modified caller's number to the incoming call log list so that the extension user can call back the caller. Digits are removed from or added to the beginning of the received digits.

Selection

- Number of digits to be deleted: 0 through 9 (0 = no deleting)
- Number to be added: 4 digits (max.)

Default

Deleted number – 0; Added number – 1

Programming

1. Enter 127.
   Display: 127 CID LD

2. Press NEXT.
   Display example: Del, Add: 0, 1

3. Enter the number of digits to be deleted.
   To change the current entry, press CLEAR and enter the new number.

4. Press ➔ to program the number to be added, if required.

5. Enter the number to be added.
   To change the current entry, press CLEAR and enter the new number.

6. Press STORE.

7. Press END.

Conditions

The added number has a maximum of 4 digits, consisting of 0 through 9, *, and #.

CO Incoming Call Information Log
**Message Waiting Ring Interval Time**

**Description**
Sets the Message Waiting ring interval time for a single line telephone.

**Selection**
Time (minutes) : 0 through 64

**Default**
0 min (no ring)

**Programming**
1. Enter 216.
   Display: 216 M-W RING TIME

2. Press NEXT.
   Display example: Interval: 0 min

3. Enter the time.
   To change the current entry, press CLEAR and enter the new time.

4. Press STORE.

5. Press END.

**Conditions**
- When the interval time is set to "0," the telephone does not ring for Message Waiting notification.
- Selecting the message waiting ring type, 3 quick rings or 2 normal rings, in program [990] "System Additional Information, Field (40)" is available. If you prefer soft ringing, select "3 quick rings." In this case, there may be some kinds of telephones which do not ring.

Timed Reminder Alarm Ring Time

Description  Sets the number of seconds the Timed Reminder alarm rings.
Selection     Time (seconds): 30 through 240
Default       30 s
Programming
1. Enter 217.
   Display: 217 TIMED REMIND
2. Press NEXT.
   Display example: Reminder: 30sec
3. Enter the time.
   To change the current entry, enter the new time.
4. Press STORE.
5. Press END.

Conditions None

Feature References Section 3, Features,
Timed Reminder
Timed Reminder, Remote (Wake-Up Call)
Description
Sets the number of seconds the system waits for a second digit entry. If the timer expires, the system assumes that the first digit is a DISA built-in auto attendant number if assigned in program [815] "DISA Built-in Auto Attendant."

Selection
Time (seconds): 1 through 5

Default
1 sec

Programming
1. Enter 218.
   Display: 218 DISA AA WAIT

2. Press NEXT.
   Display example: Time: 1 sec

3. Enter the time.
   To change the current entry, enter the new time.

4. Press STORE.

5. Press END.

Conditions
None

4.4 Timer Programming  

*Call Park Recall Time*

**Description**  
Sets the number of call park recall rings. Call park recall is used to alert an extension that a call has been parked for an extended period of time.

**Selection**  
Number of rings: 3 through 48

**Default**  
12 rings

**Programming**

1. **Enter 219.**  
   Display: 219 PARK RECALL

2. Press NEXT.  
   Display example: Time: 12 rings

3. Enter the **number of rings.**  
   To change the current entry, press CLEAR and enter the new number of rings.

4. Press STORE.

5. Press END.

**Conditions**

- One ring is equivalent to five seconds.
- You cannot leave the entry empty.

**Feature References**

Section 3, Features, Call Park
**ARS Time**

**Description**
Assigns times for the four ARS time schedules. It is possible to split a day into four time zones (maximum) so that the least expensive line is selected for that time. According to the service hours and charges offered by your carriers, enter the starting time of each zone.

**Selection**
- Day of the week: 1 (Mon) / 2 (Tue) / 3 (Wed) / 4 (Thu) / 5 (Fri) / 6 (Sat) / 7 (Sun) / *(all days)*
- Time schedule: A / B / C / D
- Time (hour): 1 through 12 / Disable (no schedule)
- AM / PM

**Default**
All days of the week: A – 8:00 AM; B – 5:00 PM; C – 9:00 PM; D – Disable

**Programming**

1. Enter 313.
   
   Display: 313 ARS TIME SET

2. Press NEXT.
   
   Display: Day of week?

3. Enter the day of the week.
   
   Display example: MON-A: 8:00 AM
   
   To program another time schedule, keep pressing NEXT or PREV until the desired time schedule is displayed.

4. Enter the hour.
   
   To set no schedule (Disable), press SELECT and go to step 6.
   
   If “Disable” is selected, pressing SELECT shows the previous stored hour.
   
   To change the current entry, press CLEAR and enter the new hour.

5. Press ➩ to select AM / PM.

6. Press SELECT for AM or PM.

7. Press STORE.

8. To program another time schedule, keep pressing NEXT or PREV until the desired time schedule is displayed.

9. Repeat steps 4 through 8.

10. Press END.
Conditions

- Enter a starting time for each time schedule. Select "Disable" for idle schedules.
- You cannot leave an entry empty.
- To assign all days of the week, press the * key in step 3. In this case, the display shows the contents programmed for Monday.

Automatic Route Selection (ARS)
Emergency Dial Number Set

Description
Stores up to ten emergency call numbers. Emergency numbers are not subject to toll restriction, Account Code – Verified mode or Electronic Station Lockout.

Selection
• Location number: 01 through 10
• Emergency number: 7 digits (max.)

Default
Location 01 = 911, Other location – Not stored

Programming
1. Enter 334.
   Display: 334 EMERGENCY #

2. Press NEXT.
   Display: Location NO?→

3. Enter a location number.
   To enter location number 01, you can also press NEXT.
   Display example: 01: 911

4. Enter an emergency number.
   To delete the current entry, press CLEAR.
   To change the current entry, press CLEAR and enter the new number.

5. Press STORE.

6. To program another location, press NEXT or PREV, or SELECT and the desired location number.

7. Repeat steps 4 through 6.

8. Press END.

Conditions
Each emergency number has a maximum of seven digits, consisting of 0 through 9.

### 4.6 CO Line Programming

#### CO Line Name Assignment

**Description**
Assigns names of the company or customer to each CO line so that the operator or extension user can find the destination which the caller is trying to reach before answering. If Caller ID is assigned, each extension can select either the initial display, Caller ID or line name.

**Selection**
- CO line number:
  - KX-TD816 – 01 through 08, * ( *=all CO lines)
  - KX-TD1232 – 01 through 24, * ( *=all CO lines)
- Name: 10 characters (max.)

**Default**
All CO lines – Not stored

**Programming**

1. Enter 417.
   
   Display: 417 CO LINE NAME

2. Press NEXT.
   
   Display: CO Line NO?→

3. Enter a CO line number.
   
   To enter CO line number 01, you can also press NEXT.
   
   Display example: CO01:Not Stored

4. Enter a name.
   
   For entering characters, see Section 4.1.3 “Entering Characters.”
   
   To delete the current entry, press CLEAR.
   
   To change the current entry, press CLEAR and enter the new name.

5. Press STORE.

6. To program another CO line, press NEXT or PREV, or SELECT and the desired CO line number.

7. Repeat steps 4 through 6.

8. Press END.

**Conditions**
- In the case of KX-TD1232, CO01 through CO12 are for the Master System and CO13 through CO24 are for the Slave, if available.
- There is a maximum of 24 names. Each name has a maximum of 10 characters.
- To assign all CO lines to one selection, press the * key in step 3. In this case, the display shows the contents programmed for CO01.
- You can select the initial display, caller ID or CO line name, by Station Programming.

Voice Mail Integration for Digital Proprietary Telephones |

*: Available when the Digital Super Hybrid System is connected to a Digital Proprietary Telephone capable Panasonic Voice Processing System (one that supports digital proprietary telephone integration; e.g. KX-TVS100).
## Resource Programming

### System Data Printout

**Description**
Starts or stops printing the system data. All or a specific range of the current system-programmed data is printed out. The ranges are as follows:

- **Manager**: Manager Programming [000] through [009]
- **System**: System Programming [100] through [127]
- **Timers**: Timer Programming [200] through [219]
- **TRS/ARS**: TRS/ARS Programming [300] through [334]
- **CO line**: CO Line Programming [400] through [417]
- **COS**: COS Programming [500] through [508]
- **Extension**: Extension Programming [600] through [610]
- **Option**: Option Programming [990] through [992]

**Selection**
- Printout range number:
  - * (All) / 0 (Manager) / 1 (System) / 2 (Timer) / 3 (TRS/ARS) / 4 (CO line) / 5 (COS) / 6 (Extension) / 8 (Resource) / 9 (Option)
- **Start / Stop**

**Default**
Not applicable.

### Programming
1. Enter 802.

   Display: 802 DATA DUMP

2. Press NEXT.

   Display: Enter range →

3. Enter a printout range number or * for “All.”

   Display: Print-Out:Start

4. Press STORE to start printing.

   Printing starts.
   To stop printing, press SELECT and go to step 4.

   When printing is completed, the display shows:

   Display: Print-Out:Finish

5. Press STORE.

   Display: Print-Out:Stop

6. Press END.
4.9 Resource Programming

System Data Printout (contd.)

Conditions

- It is necessary to connect a printer to the EIA (RS-232C) port provided on the system.
- You may stop printing by pressing the END button while records are being printed out.
- You cannot restart the printout while records are being output.

**DISA Security Type***

**Description**
Assigns the security mode for CO calls attempted by the DISA caller. There are three modes: Non Security, Trunk Security (CO line security), and All Security. Non Security mode allows the caller to access a CO line without dialing a DISA user code. Trunk Security mode requires the caller to enter a DISA User Code before making a CO call. All Security mode requires the caller to enter a DISA user code before making both a CO call and an intercom call.

**Selection**
Non (non security) / Trunk (trunk security) / All (all security)

**Default**
Non

**Programming**
1. Enter 809.
   Display: 809 DISA SECURE

2. Press NEXT.
   Display example: Security:Non

3. Keep pressing SELECT until the desired selection is displayed.

4. Press STORE.

5. Press END.

**Conditions**
Program [811] “DISA User Codes” is used to program DISA User Codes.

**Feature References**
Section 3, Features,
Direct Inward System Access (DISA)

*: Available for KX-TD 1232 only.
4.9 Resource Programming

**DISA User Codes***

**Description**
Assigns the DISA User Codes and a Class of Service (COS) to each code. The COS of the code determines the toll restriction level of the DISA caller.

**Selection**
- DISA user code number: **1 through 8**
- DISA user code: **4 through 10 digits**
- COS number: **1 through 8**

**Default**
- Code 1=1111 - COS 1;
- Code 2=2222 - COS 1;
- Code 3=3333 - COS 1;
- Code 4=4444 - COS 1;
- Code 5=5555 - COS 1;
- Code 6=6666 - COS 1;
- Code 7=7777 - COS 1;
- Code 8=8888 - COS 1

**Programming**
1. Enter 811.
   Display: 811 DISA CODES
2. Press NEXT.
   Display: User Code NO?+  
3. Enter a DISA user code number.
   To enter user code number 1, you can also press NEXT.
   Display example Code1:1111 COS:1  
4. Enter a DISA user code.
   To change the current entry, enter the new code.
5. Press ► to program COS.
6. Enter a COS number.
   To change the current entry, enter the new COS number.
7. Press STORE.
8. To program another user code, press NEXT or PREV, or SELECT and the desired DISA user code number.
9. Repeat steps 4 through 8.
10. Press END.

**Conditions**
- This setting is required if Trunk (CO line) Security mode is selected in program [809] “DISA Security Type.”
- There are four programmable user codes. Each code should be unique and composed of eight numerical digits, **0 through 9**.
- You cannot leave an entry empty.

Floating Number Assignment

Description
Assigns the floating numbers for External Pagers, DISA* messages, modem* and extension groups. These numbers can be used the same way extension numbers are used for station access.

Selection
• Floating station: KX-TD816 – Pager1 / E-Group 1 through 8
  KX-TD1232 – Pager1 through 4 / DISA1 / DISA2 / MODEM / E-Group 1 through 8
• Floating number: 2 through 4 digits

Default
KX-TD816 – Pager 1=196; E-Group 1=191; E-Group 2=192;
  E-Group 3=193; E-Group 4=194; E-Group 5=291;
  E-Group 6=292; E-Group 7=293; E-Group 8=294;
KX-TD1232 – Pager 1=196; Pager 2=197; Pager 3=296;
  Pager 4=297; DISA 1=198; DISA 2=298;
  MODEM=299; E-Group 1=191; E-Group 2=192;
  E-Group 3=193; E-Group 4=194; E-Group 5=291;
  E-Group 6=292; E-Group 7=293; E-Group 8=294;

Programming
1. Enter 813.
   Display: 813 FLOATING #

2. Press NEXT to program Pager 1.
   Display example: Pager1:EXT196
   To program another floating station for KX-TD1232, keep pressing NEXT or PREV until the desired floating station is displayed.

3. Enter a floating number.
   To change the current entry, press CLEAR and enter the new floating number.

4. Press STORE.

5. To program another floating station, keep pressing NEXT or PREV until the desired floating station is displayed.

6. Repeat steps 3 through 5.

7. Press END.

Conditions
• A floating number is composed of two to four numerical digits, 0 through 9.

*: Available for KX-TD1232 only.
Resource Programming

Floating Number Assignment (contd.)

- The first one or two digits of the floating numbers are subject to program [100] "Flexible Numbering, (01) through (16) 1st through 16th hundred extension blocks."
- Floating numbers and extension numbers should be unique. Double entry and incompatible entry for these numbers are invalid. Valid entry example: 10 and 11, 10 and 110; Invalid entry example: 10 and 106, 210 and 21.

In order not to make an invalid entry, check the other extension numbers in programs [003] "Extension Number Set," [118] "VM Extension Number Assignment" and [124] "Phantom Extension Number Assignment." The default of each extension number is as follows:

[003] Extension Number Set
   KX-TD816 – 101 through 116, 201 through 216
   KX-TD1232 – 101 through 164, 201 through 264

[118] VM Extension Number Assignment
   165 through 180

[124] Phantom Extension Number Assignment
   Not assigned.

- You cannot leave an entry empty.

**DISA Built-in Auto Attendant***

**Description**
Assigns the DISA built-in auto attendant number. The extension number and the floating number can be assigned as a one digit number and used as a DISA built-in auto attendant number.

**Selection**
- DISA built-in auto attendant number: 0 through 9
- Extension number / Floating number: 2 through 4 digits

**Default**
Disable

**Programming**

1. Enter **815**.
   Display: 815 DISA AA

2. Press NEXT.
   Display example: Dial NO?+

3. Enter a DISA built-in auto attendant number.
   To enter DISA AA number 0, you can also press NEXT.
   Display example: Dial 0:EXT112

4. Enter an extension or floating number.
   To change the current entry, press CLEAR and enter the new floating number.
   Display example: Dial 0:EXT112

5. Press STORE.

6. To program another DISA AA number, press NEXT or PREV, or SELECT and the desired DISA AA number.

7. Repeat steps 3 through 6.

8. Press END.

**Conditions**
This system can store up to nine programmable DISA built-in auto attendant numbers.

**Feature References**

| [314]-[321] ARS Leading Digit Entry for Plans 1 through 8 | Section 4          | **Conditions**
There is a maximum of 50 leading digit numbers for each plan. Each number has a maximum of seven digits, consisting of 0 through 9, and *. The character "*" can be used as a wild card character (i.e., "do not care" digit). The system scans all the ARS Leading Digit Plans simultaneously from left to right. The scan ends as soon as the dialed number matches a table entry. When using a wild card character, it is important to use one in each digit position that must be scanned. For example, to differentiate local and long distance calls with the same leading digits: Plan 1) 1-*-*; Plan 2) 1-215. Note that three wild card digits were used to ensure that the system scanned the first four digits. A shorter string of "*"s would send all the calls to the Plan 1 carrier.

Installation Manual
Version 3 Addendum
(Covers Main Unit Programming only)

MODEL
KX-TD816 / KX-TD1232
Introduction

This Manual is to be used in conjunction with Installation Manual PQX10172XA. This Manual includes New and Changed Programming Steps for both the KX-TD816-3 and KX-TD1232-3 Main Unit. Installation Manuals for programming the New options (KX-TD171/185/194/197) are included with each option.

Hotel Application — Room Status

Description
Allows the operator to handle the front/operator service of checking the room status, ready or not ready, with the DSS button on a DSS Console connected to a KX-T7436 or KX-T7235.

Conditions
- The hotel application must be enabled by System Programming.
- Changing the room status can be done by the operator and also by a person in a guest room.
- The DSS button indicates as follows.
  Ready mode: Off
  Not Ready mode: Flashes red

Hotel Application
Night Service

Description
The system supports both night and day modes of operation. The system operation for originating and receiving calls can be different for day and night modes. The system operation for restricting toll calls can be arranged separately to prevent unauthorized toll calls at night.

Switching the Day / Night Mode
Day / Night mode can be switched either automatically at a pre-assigned time or manually by a pre-assigned extension, operator or the manager at any desired time.
Class of Service programming determines which extensions can perform this.

Automatic Night Service: If you select the automatic switching mode, your system will switch the day / night mode at the programmed time each day. The starting time of the day / night mode can be set for each day.

Manual Night Service: If you select the manual switching mode, the pre-assigned extension, operator or the manager can switch the day / night mode by dialing the feature number or pressing the Night button.

Conditions
The following programming items may be assigned differently for the day and night modes.

[137]-[138] DID Extension — Day / Night
[407]-[408] DIL 1:1 Extension — Day / Night
[409]-[410] Intercept Extension — Day / Night
[455]-[456] Extension Ringing Assignment — Day / Night
[500]-[501] Toll Restriction Level — Day / Night
[603]-[604] DIL 1:N Extension and Delayed Ringing — Day / Night
[605]-[606] Outgoing Permitted Outside Line Assignment — Day / Night
[607]-[608] Doorphone Ringing Assignment — Day / Night

Off-Hook Call Announcement (OHCA)

Description
OHCA allows you to inform a busy extension that another call is waiting by talking through the built-in speaker of the called party's proprietary telephone. If the existing call is using the handset, the second conversation is made with the speakerphone so that the called party can talk to two parties independently. OHCA is performed the same way as Busy Station Signaling (BSS). It depends on the telephone type used by the called party whether Call Waiting, OHCA or Whisper OHCA is activated by the operation. If the called telephone is one of the following, OHCA becomes active: for KX-TD816: KX-T7436, KX-T7235, for KX-TD1232: KX-T7436, KX-T7235, KX-T7130.

Conditions
- Class of Service programming determines which extensions can perform this.
- If none of three features, Call Waiting, OHCA or Whisper OHCA is set at the called party, the caller will hear a reorder tone.

Programming References
Section 4, System Programming
[100] Flexible Numbering, Call waiting / OHCA / whisper OHCA
[509] Off-Hook Call Announcement (OHCA)
Off-Hook Monitor

Description

Allows the KX-T7431, KX-T7433, and KX-T7436 digital proprietary telephone users to let the other users listen to the conversation through the built-in speaker, while continuing the same call using the handset.

Conditions

This is effective with a handset conversation.

DPT Features
Off-Hook Monitor
System Programming

Hotel Application

Description
Assigns whether the hotel application is enabled or disabled.

Selection
ON / OFF

Default
OFF

Programming
1. Enter 134.
   Display: 134 HOTEL ON/OFF

2. Press NEXT.
   Display example: HOTEL:OFF

3. Keep pressing SELECT until the desired selection is displayed.

4. Press STORE.

5. Press END.

Conditions
If “ON” is selected, the “Hotel” menu is displayed on the operator extension’s KX-T7436 or KX-T7235, and the “Room Status” feature is available.

Feature Reference
Section 3, Features
Hotel Application
### Description
Enables or disables to perform the Off-Hook Monitor.

### Selection
Enable / Disable

### Default
Enable

### Programming
1. Enter 148.
   
   Display: 148 HOOK MONITOR

2. Press NEXT.
   
   Display example: Monitor:Enable

3. Keep pressing SELECT until the desired selection is displayed.

4. Press STORE.

5. Press END.

### Conditions
Off-Hook Monitor is only available for the KX-T7431, KX-T7433 and KX-T7436 telephone users.

### Feature Reference

System Programming

Off-Hook Call Announcement (OHCA)

Description
Enables or disables to perform the Off-Hook Call Announcement (OHCA) on a Class of Service (COS) basis.

Selection
- COS number: 1 through 8, ( *=all COS)
- Enable / Disable

Default
All COS – Enable

Programming
1. Enter 509.
   Display: 509 OHCA
2. Press NEXT.
   Display: COS NO?
3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1:Enable
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another COS, press NEXT or PREV, or SELECT and the desired COS number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- To assign all COS to one selection, press the key in step 3. In this case, the display shows the contents programmed for COS 1.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

System Programming

Night Service Access

Description
Enables or disables switching the Day/Night service on a Class of Service (COS) basis.

Selection
- COS number: 1 through 8 (*=all COS)
- Enable / Disable

Default
All COS – Disable

Programming
1. Enter 510.
   Display: 510 NITE SERVICE
2. Press NEXT.
   Display: COS NO?
3. Enter a COS number.
   To enter COS number 1, you can also press NEXT.
   Display example: COS1: Disable
4. Keep pressing SELECT until the desired selection is displayed.
5. Press STORE.
6. To program another COS, press NEXT or PREV or SELECT and the desired COS number.
7. Repeat steps 4 through 6.
8. Press END.

Conditions
- To assign all COS to one selection, press the key in step 3. In this case, the display shows the contents programmed for COS 1.
- The operator extension can switch the mode regardless of setting.
- Program [601] “Class of Service” is used to assign a Class of Service to each extension.

System Additional Information (contd.)

Selection

- Area code: 01 (area 1) / 02 (area 2) / 03 (area 3) / 04 (area 4) / 05 (area 5) / 06 (area 6) / 07 (area 7)
- Field number: 1 through 63
- Selection: See “Selection” on pages 4-205 through 4-210.

Default

See “Default” shown in the table.

Programming

1. Enter 990.
   Display: 990 SYS ADD DATA

2. Press NEXT.
   Display: Area NO?→

3. Enter an area code (01 through 07).
   Display example: 0010000001

4. Keep pressing → or ← to move the cursor to the desired field.

5. Enter your selection (0 or 1).
   To change the current entry, press STORE and enter the new selection.

6. To program another field, repeat steps 4 and 5.

7. Press STORE.

8. To program another area, press SELECT and the desired area code.

9. Repeat steps 4 through 8.

10. Press END.

Conditions

None

Feature References

See “References” on pages 4-205 through 4-210.
