- Managing Key Assignments ............................................ 27–28
- Programming Account Codes ........................................... 29
- Station Timers ................................................................. 30–31
- Adding Names to the Translation Table ............................ 31–32
- Holiday .................................................................. 33
- Customer Set Relocation .................................................. 34–35

## SYSTEM MAINTENANCE ALARMS ................................. 36
ABOUT THIS BOOK

This book contains instructions for special features that every telephone user may not need to know. The owner can decide who the system administrator will be and who will have access to these features. Station users can be trained on only the items that apply to them. This procedure will help control costs and telephone abuse.

Several of the features listed in this book are specific to the system operator or attendant position. You can have more than one operator or set your system up to be used without an operator.

The designated system administrator can access specific programs and modify some functions to better manage the iDCS office telephone system. Instructions are detailed and easy to follow. When assistance is needed, contact your installation and service company.
SPECIAL FEATURES

SYSTEM RING PLANS

Your system is designed to have a maximum of six different Ring Plans. Each ring plan can be programmed to allow different lines to ring different ring plans to ring different station and/or station groups. Examples of why different ring plans are required can include normal day operation, night operation, using different operators during different lunch shifts and Saturday or evening hours of operation. While the system is in a ring plan, each station will be limited to its individual Ring Plan class of service dialing restrictions. You can place the system in one of any six of these ring plans at any time. Ring Plans are available on an individual tenant basis and may be set automatically or manually. Automatic Ring Plans have an individual start time and will remain in that mode until the beginning of the next defined ring plan. If no automatic timer is set, you must change ring plans manually.

Any of these ring plans can be switched from one plan to another at any time by manually pressing a ring plan button. There are two ways to override the automatic ring plans; one is a temporary override until the next programmed start time, and the other is a permanent override until manually changed.

MANUAL RING PLAN CHANGE

Press the RTO button plus the ring plan passcode (four digits) and the ring plan (1-6) you wish to set. The system will override all the automatic time tables and will remain in the set ring plan until manually changed. To manually change or cancel the ring plan time override and return ring plan operation to the system clock: press the RTO plus the ring plan passcode (four digits) and a "0" to cancel the ring plan time override and return to normal operation.

TEMPORARY RING PLAN CHANGE

Press the RP button plus the ring plan passcode (four digits) and the ring plan (1-6) you wish to set. The system will remain in that ring plan until the next automatic start time for the next ring plan goes into effect.

NOTE: This button may also be assigned an extender of one of the six ring plans. Example: An RP button is given an extender of 3 (RP3) and the operation of this button is a push on/push off type of operation with the system always returning to ring plan 1 when the key is turned off. When the system is operating in ring plan 3, the RP3 button will light steady red, and when off the light will also turn off.

CALLING THE SYSTEM OPERATOR

Any station that dials 0 will ring its assigned operator. (If tenant service is used, each tenant may have a different operator or operator group.) Calls to the system or tenant operator are easily identified because the CALL key will have a fast flashing red light. Station users will never receive a busy signal when they dial 0 or the operator group number. The calls will continue ringing in queue until answered.

OPERATOR RECALLS

Transferred calls that go unanswered will recall to the station that originated the transfer. Should the station that originated the transfer not answer the recall, the call will be sent to the operator as a transfer recall.

A call left on hold will recall the station that put it on hold. If the hold recall is unanswered at the station that originated the hold, the call is sent to the operator.

Both types of recalls will ring and have a slow flashing amber light on the LINE key or CALL key.

EXECUTIVE BARGE-IN

If you want to break into another conversation, you must be allowed to barge-in and the other station or trunk must not be secure.

- Dial the desired extension or trunk number and listen for the busy signal.
- Press the BARGE button and begin speaking after the tone.
- Hang up when you are finished.

The system can be set for one of the three following barge-in options:

- No barge-in allowed
- Barge-in with intrusion tone
- Barge-in without intrusion tone (service observing)

When the second or third option is selected the barger will take priority over the line. This means unless you (barger) hang up first, the station or line you barged into will still be connected to you when the station you barged into hangs up.
To create a backup or relief operator position, assign the main operator and one or more backup individuals to the operator group. All but the main operator should be out of the group. When it is necessary to use a backup operator, put the desired backup station in the group and remove the main operator. When incoming call traffic is heavy, you can have another station put itself in the operator group along with the main operator to handle the extra call load.

If the station does not have an IN/OUT key:

- Lift the handset and dial the feature access code _______________.
- Dial the group number.
- Dial 0 to be out of the group or dial 1 to be in the group.
- Receive confirmation tone and hang up.

If the station has an IN/OUT key:

- Press the IN/OUT key. It will light red when the station is in the group.
- Press the IN/OUT key again. The light is off when the station is out of the group.

NOTE: A station can be in more than one group.

DIRECT INWARD SYSTEM ACCESS (DISA)

From outside of the office, selected individuals can call into the iDCS system on special DISA line(s). A security code must be entered to gain access. Once these individuals are in the system, they can make outside calls using the office lines or call stations within the system. Individuals who will use DISA must have their stations assigned for DISA access and must change their station passcodes. The default passcode 1234 cannot be used.

- Call in on the DISA line from any phone with tone dialing.
- You will hear a dial tone. Dial your security code (your extension number plus your station passcode).
- If you are allowed access, you will receive a dial tone.
- Dial any line access code, receive outside dial tone and then dial a telephone number OR dial any extension number to call a station in the system.
- To make another call, press *, receive dial tone and dial another number.
- Press # and hang up when finished.
NOTE: Outgoing DISA calls are controlled by the dialing class of the station identified by the security code. The DISA line must have disconnect supervision from the central office. Insist that this service is verified by your installation/service company.

DISA SECURITY

A common practice among hackers is to repeatedly dial a known DISA access number (usually with a computer) and try a different passcode each time. The hacker hopes to eventually chance upon the correct passcode and thus gain access to your system. The idCS security feature counts the number of sequential incorrect passcode attempts. If a certain number is reached, DISA is disabled and the system sends an alarm to designated display stations. The number of passcode attempts and the disable duration are both programmable. In addition, the idCS system will print an SMDR record (a customer-provided printer is required) each time an incorrect passcode is entered.

The DISA alarm will ring for a programmable time before canceling the ringing; however, the DISA alarm display will remain until the alarm is cleared. To clear the DISA alarm, follow the following procedure:

- Lift the handset and dial 58.
- Enter the DISA alarm passcode (see your service company).
- Replace the handset.

WARNING
As it is impossible to prevent unauthorized access to your telephone system by hackers, we suggest that you do not turn the DISA feature on unless you intend to use it. If you do use this feature, it is good practice to frequently change passcodes and periodically review your telephone records for unauthorized use.

FORCED ACCOUNT CODES

VERIFIED

When set for this option the user must enter an account code for all outgoing calls. The account code entered will be verified from a system list of 500 entries for the idCS 500 M version software and idCS 100 software or from a list of 999 entries for the idCS 500 L/LE version software. Forced verified codes can contain the digits 0–9.

NOT VERIFIED

When set for this option the user must enter an account code for all outgoing calls, but the account code is not verified against the system list. Non verified account codes can contain the digits 0–9, *, and #.

USING FORCED ACCOUNT CODES

- Lift the handset and press the ACCT CODE key or dial 47.
- Enter the account code.
- Press the account code button again, press TRSF or hookflash (on an SLT). If a correct code is entered, you will hear a dial tone and you can make an outside call in the usual manner. If an incorrect code is entered, the station returns error tone.

This code will always print on SMDR reports. For information on entering and changing forced account codes, see the system administrator programming section of this book.

AUTHORIZATION CODES

Authorization codes are used to validate a station user and give permission to make a call. These four digit authorization codes can be either forced or optional, but if used, are always verified from a system list of 250 entries for an idCS 100 or idCS 500 M system, and 500 entries for an idCS 500 L/LE system. Each authorization code has an associated class of service. When the code is entered, the class of service is changed to that of the authorization code.

USING AUTHORIZATION CODES

After going off-hook, the station user must dial * followed by a four digit authorization code. If you enter a correct code, you will hear confirmation tone and then receive a dial tone and you can make an outside call in the usual manner. The station then follows the dialing class for that authorization code. If you enter an incorrect code, the station returns error tone. This code may or may not print on SMDR reports depending on SMDR programming.
**USING THE TIE LINE**

**OUTGOING**
Your office can be connected to another system with a tie line. Use this line to make calls to stations in the other system. If programming allows, you can access lines in the other system to make outside calls. Tie line calls can be put on hold, transferred and conferenced in the same manner as are other outside calls.

- Lift the handset or press the **SPK** or **MONITOR** key.
- Dial the tie line access code or press the tie line key.
- When you receive dial tone from the other system, you can dial extension numbers or access outside lines. You must know the extension numbers and the line access codes for the other system.
- Finish the call by replacing the handset or pressing the **ANS/RLS** or the **MONITOR** key if you are using a 7 button phone.

**NOTE:** Outgoing calls are controlled by the station’s dialing class.

**INCOMING**
Station users in the other system can access the tie line and make intercom calls to stations in your system. Answer tie line calls ringing at your station as you would any other outside call. They can be put on hold, transferred and conferenced in the same manner as are other outside calls.

**IN AND OUT ON TIE LINE**
Users accessing the tie line from the other system can get a line in your system and make outgoing calls. These calls can be controlled by assigning a dialing class to the tie line. For further information, see your service company.

**CALLER ID**

**SPECIAL FEATURES**

**NOTE:** The Caller ID features below require optional software and/or hardware. Please ask your installation and service company for details.

**ABANDON CALL LIST**
The system has a system-wide abandoned calls list that stores CID information for the last 50 calls in the iDCS 500 M and iDCS 100 (100 in the iDCS 500 L/LE version) that rang but were not answered and were accompanied with valid CID information. Calls with CID information consisting of OUT OF AREA, PAYPHONE or PRIVATE will not be stored in the list. The abandoned calls list is accessed using the system administrator’s passcode. When reviewing this list, you are provided options to **CLEAR** the entry or **DIAL** the number. You can use the **NND** key to toggle between the CID name, CID number and the date and time the call came in. The system must be using LCR to dial numbers from the abandoned calls list.

To view the list of abandoned incoming calls for which CID information has been received:

- Dial 64 and dial the system administrator passcode.
- **Scroll through the entries using the VOL keys.**

**CID ON SMDR**
The Station Message Detail Records (SMDR) report can be set to include the CID name and number for incoming calls. This format expands the print-out to 113 characters. You must use a wide carriage printer or an 80 column printer set to the condensed print option.

**NUMBER TO NAME TRANSLATION**
The system provides a translation table of 400 entries in the iDCS 500 M (1500 in the iDCS 500 L/LE version) or 350 entries in the iDCS 100 system for use in areas that do not provide name and number (sometimes called “deluxe”) Caller ID or when ANI is received. When the CID or ANI number is received, the table is searched. When a match is found, the system will display the corresponding name from the table. This will allow users in areas that do not support “deluxe” Caller ID or have only ANI service to provide names for callers.
CALLER ID SPECIAL FEATURES

INVESTIGATE

Investigate allows selected stations with a special class of service to investigate any call in progress. If CID information is available for an incoming call, you will know to whom this station user is speaking. For outgoing calls, you can see the number that was dialed. After investigating, you may barge-in on the conversation, disconnect the call or hang up your phone to end the investigation.

- At your keyset, press the INVESTIGATE key.
- Enter your station passcode. (Default passcodes cannot be used.)
- Enter the station number to be investigated.
- You can now press BARGE to barge-in on the conversation.
  OR
  You can press NND to view more information about the call.
  OR
  You can press DROP to disconnect the call.

NOTES:
1. If the call is an outgoing call, the NND key will not appear.
2. This feature requires optional software and/or hardware. Please ask your installation and service company for details.

WARNING
This feature may violate state or federal laws concerning the right to privacy. Samsung Telecommunications America is in no way responsible for the possible misuse of this feature.

NOTE: This information is NOT repeated in this user guide.
CUSTOMER LEVEL ACCESS

Before any customer programs can be accessed, you must first open system programming using the passcode you have been assigned. You must use a display keyset. Should it become necessary to change this passcode, see your service company.

- While on-hook, press **TRSF** and then dial **200**. Your display shows [ENABLE CUS. PROG. PASSCODE].
- Dial the four digit passcode. The display shows [ENABLE CUS. PROG. - DISABLE].
- Dial 1 to enable. The display shows [ENABLE CUS. PROG - ENABLE].
- Press **TRSF**. The keyset returns to its idle condition.
- Press **TRSF** and then dial the three digit program code you want to access. Follow the instructions for that program.

NOTE: You must begin programming within 30 seconds. Once you are in programming, any delay of more than 30 seconds between key strokes will cause the system to automatically close programming.

CUSTOMER LEVEL ACCESS USING THE PROG KEY

A designated keyset may be programmed with a “**PROG**” key which allows access to the following areas of system programming. When pressed you must enter your station passcode (the default code 1234 must be changed) followed by the MMC number. The only MMCs that may entered from pressing the “**PROG**” key are as follows:

- MMC 100 Station Lock for All Stations
- MMC 102 Station Forward for All Stations
- MMC 104 Station Name
- MMC 115 Program Message for all Stations
- MMC 505 System Day and Time
- MMC 705 System Speed Dial
- MMC 706 System Speed Dial Name
CHANGING FEATURE PASSCODE

You can change individual feature passcodes. This program is used to change the passcodes for several features. These features are the following: RING PLAN SERVICE, DISA ALARM, ALARM CLEAR, and AA RECORD. Note: Each passcode is four digits long. Each digit can be 0 to 9.

PROGRAM KEYS

UP & DOWN - Select the extension number.
HOLD - Press to reset the passcode to default settings.

Open customer programming and follow the instructions below.

ACTION

1. Press TRSF and then dial 202
   Display shows
   
   CHANGE PASSCODE
   RING PLAN: 0000

2. Use the UP and DOWN keys to scroll through the different options and press the right soft keys.

3. Press HOLD to reset the passcode
   
   CHANGE PASSCODE
   RING PLAN: 0000

4. Press TRSF to store and exit programming OR press SPK to store and advance to the next program

SET DATE AND TIME DISPLAY

Should it ever become necessary to correct the date and time displayed on all of the keysets, do so as soon as you notice that they are incorrect. Automatic Operating Mode will not work correctly and SMDR records will be of no value when the date and time are not correct.

The display format is the following:

W (Day of the week): Enter 0 for Sunday and 6 for Saturday.
MM (Month): Enter 01 for January and 12 for December.
DD (Day of the month): Enter a number in the range of 01–31.
YY (Year): Enter the last two digits of the year.
HH (Hours): Use the 24 hour clock and enter a number in the range of 00–24.

MM (Minutes): Enter a number in the range of 00–59.

Failure to enter the time using the 24 hour clock will cause the date to change at 12:00 P.M. Open customer programming and follow the instructions below.

ACTION

DISPLAY

1. Press TRSF and then dial 505
   Display shows
   
   OLD: 6010184:0047
   NEW: WMMDDYY:HHMM

2. Enter the new time and date using the above format
   
   OLD: 6010184:0047
   NEW: 3020994:1445

3. Verify the time and date and reenter them if necessary
   
   OLD: 3020994:1445
   NEW: WMMDDYY:HHMM

4. Press TRSF to store and exit programming OR press SPK to store and advance to the next program

If you have entered invalid data, you will receive an [INVALID ENTRY] message for three seconds. Reenter the correct date and time. If the information you entered is incorrect, repeat the procedure.

RESET STATION PASSCODES TO DEFAULT

Individual keyset users can set or change their own individual passcodes. These passcodes are used to lock and unlock keysets, override toll restriction and access the DISA feature. At times, it may be necessary for the system administrator to reset a station’s passcode to default “1234.” This program cannot be used to display passcodes, only to reset them.

PROGRAM KEYS

UP & DOWN - Select the extension number.
HOLD - Press to reset the passcode.

Open customer programming and follow the instructions below.

ACTION

DISPLAY

1. Press TRSF and then dial 101
   Display shows
   
   [201] PASSCODE
   PASSCODE: ****
2. Dial the station number OR use the **UP** and **DOWN** keys to scroll through the keyset numbers and press the right soft key to move the cursor right

3. Press **HOLD** to reset the passcode

4. Press the right soft key to return step 2 OR press **TRSF** to store and exit programming OR press **SPK** to store and advance to the next program

**DEFAULT DATA: ALL STATION PASSCODES = 1234**

**PROGRAM STATION NAMES**

This program is used to assign a character name or identification for each extension. You may assign a name of 11 characters long.

**PROGRAM KEYS**

**UP & DOWN** - Used to scroll and move cursor.

**KEYPAD** - Used to enter characters.

**HOLD** - Press to clear entry.

Open customer programming and follow the instructions below.

**ACTION**

1. Press **TRSF** and then dial **104**

   Display shows

2. Dial station number (e.g., **205**) OR press **UP** or **DOWN** to select the station and press the right soft key to move the cursor

3. Enter the station name using the procedure described on the next page and press the right soft key to return to step 2

4. Press **TRSF** to store and exit programming OR press **SPK** to store and advance to the next program

**NOTE:** Directory information is always 11 characters.

**DEFAULT DATA: NONE**

Names are written using the keypad. Each press of a key will select a character. Pressing the dial pad key moves the cursor to the next position. For example, if the directory name is “SAM SMITH,” press the number “7” three times to get the letter “S.” Press the number “2” once to get the letter “A.” Continue selecting characters from the table below to complete your message. Press the “A” key to change the letter from upper case to lower case.

**NOTE:** When the character you want appears on the same dial pad key as does the previous character, press the **UP** key to move the cursor to the right.

The # key can be used for the following special characters: #, space, &, !, ., ?, ., %, $, -, /, =, [ , ], @, ^, ( , ), _ , +, { , }, | , ; , “ and ~.
PROGRAM TRUNK NAMES

This program is used to assign a character name or identification for each C.O. line. You may assign a name of 11 characters long.

PROGRAM KEYS

UP & DOWN - Used to scroll and move cursor.
KEYPAD - Used to enter characters.
HOLD - Press to clear entry.

Open customer programming and follow the instructions below.

ACTION

1. Press TRSF and then dial 404
   Display shows [701] TRUNK NAME

2. Dial trunk (e.g., 704) OR press UP or DOWN to select trunk and press the right soft key to move the cursor
   Display shows [704] TRUNK NAME

3. Enter the trunk name using the procedure in Program Station Names and press the right soft key to return to step 2
   Display shows [704] TRUNK NAME

4. Press TRSF to store and exit programming
   OR press SPK to store and advance to the next program

1. When the character you want appears on the same dial pad key as the previous character, press UP to move the cursor one space to the right.
2. Other symbols are available for DIAL #.
PROGRAM STATION GROUP NAMES

This program is used to assign a character name or identification for each station group. You may assign a name 11 characters long.

PROGRAM KEYS

UP & DOWN - Used to scroll and move cursor.
KEYPAD - Used to enter characters.
HOLD - Press to clear entry.

Open customer programming and follow the instructions below.

ACTION

1. Press TRSF and then dial 602
   Display shows the first group

2. Dial the group number (e.g., 505) OR press the UP or DOWN key to make a selection and press the left or right soft key to move the cursor

3. Enter the name using the method in Program Station Names

4. Press the left or right soft key to return to step 2 OR press TRSF to store and exit programming OR press SPK to store and advance to the next program

PROGRAM SYSTEM SPEED DIAL NUMBERS

The system list starts with 200 numbers and can be increased in blocks of ten. The maximum amount is 500 numbers if no more than 1000 station speed dial numbers are assigned. See your service company to increase or decrease the system list.

The speed dial codes are 500–999. Each speed dial number consists of a line access code and the telephone number to be dialed. The access code can be any line group, individual line, station group or individual extension. The speed dial number can be up to 24 characters long including *, #, FLASH and PAUSE.

NOTE: If Least Cost Routing (LCR) is being used, the LCR access code must be entered.

When you are entering a speed dial number, there are some special keys that you will need to use. These are the bottom row of programmable keys on the LCD 12B and LCD 24B keysets and are known as keys A, B, C, D, E and F.

PROGRAM KEYS

UP & DOWN - Select the speed dial bin.
KEYPAD - Used to enter number.
HOLD - Press to clear entry.
SPK/RLS - Save data and advance to next program.
A - Does not have a function.
B - Inserts a FLASH.
C - Inserts a PAUSE.
D - Changes the dialing type from pulse to tone.
E - Hides and displays digits.
F - Changes display to speed dial name entry.

DCS KEYSETS

12 BUTTON KEYSET
PROGRAMMABLE KEYS LAYOUT

24 BUTTON KEYSET
PROGRAMMABLE KEYS LAYOUT
PROGRAM SYSTEM SPEED DIAL NAMES

This program is used to assign a character name or identification for each system speed dial location. This name enables you to locate the speed dial number when you are using the directory dial feature. You may assign a name 11 characters long.

PROGRAM KEYS

UP & DOWN - Used to scroll through speed dial bins.
KEYPAD - Used to enter selections.
SOFT KEYS - Move cursor left and right.
SPK - Used to store data and advance to next program.
HOLD - Used to clear previous entry.

ACTION

1. Press TRSF and then dial 705
   Display shows the first number

2. Dial the speed bin desired (e.g., 505) OR press UP or DOWN to choose and press the right soft key to move the cursor

3. Enter the access code (e.g., 9—the system will automatically insert a dash) followed by the phone number (up to 24 digits long) and press the right soft key to return to step 2

4. Press the F key to toggle to Program System Speed Dial Names, step 3 to enter the name

5. Press TRSF to store and exit programming OR press SPK to store and advance to the next program

DEFAULT DATA: NO SPEED NUMBERS ASSIGNED

PROGRAM KEYS UP & DOWN

- Used to scroll through speed dial bins.

PROGRAM KEYS KEYPAD

- Used to enter selections.

PROGRAM KEYS SOFT KEYS

- Move cursor left and right.

PROGRAM KEYS SPK

- Used to store data and advance to next program.

PROGRAM KEYS HOLD

- Used to clear previous entry.
PROGRAM PERSONAL SPEED DIAL NUMBERS FOR OTHER STATIONS

Individual station users can program their own numbers, but in cases where this is not practical, or for single line telephone users, this program allows a system administrator to view or change any station’s speed dial numbers. The station speed dial codes are 00–49. Each station begins with ten numbers (00–09) and can be assigned more in blocks of ten (up to a maximum of fifty numbers).

Each speed dial number consists of a line access code and the telephone number to be dialed. The access code can be any line group, individual line, station group or individual extension. The speed dial number can be up to 24 characters long including *, #, FLASH and PAUSE.

NOTE: If Least Cost Routing (LCR) is used, the LCR access code must be entered.

When you are entering a speed dial number, there are some special keys that you will need to use. These are the bottom row of programmable keys on the LCD 12B and LCD 24B keysets and are known as keys A, B, C, D, E and F.

PROGRAM KEYS

UP & DOWN - Scrolls through extension numbers and speed dial bins.

KEYPAD - Used to enter number.

HOLD - Press to clear entry.

A - Does not have a function.

B - Inserts a FLASH.

C - Inserts a PAUSE.

D - Changes the dialing type from pulse to tone.

E - Hides and displays digits.

F - Changes display to speed dial name entry.

DCS KEYSETS

Open customer programming and follow the instructions below.

ACTION

1. Press TRSF and then dial 105
   Display shows

2. Dial the station number (e.g., 205) OR press UP or DOWN to select the station and press the right soft key to move the cursor OR press the left soft key to go to step 4

3. If the selected station has no speed dial bins, this display will be shown and a new station may be selected

4. Dial the location number (e.g., 05) OR press UP or DOWN to select the location and press the right soft key to move the cursor OR press the left soft key to return to step 2

5. Enter the trunk access code (e.g., 9) followed by the number to be dialed (e.g., 4264100) OR press the right soft key to return to step 2 OR press the left soft key to return to step 3 OR press HOLD to clear an entry (if an error is made, use the DOWN key to step back)
6. Press the F key to access *Program Station Speed Dial Names* OR press TRSF to save and exit programming OR press SPK to save and advance to the next program

DEFAULT DATA: NO SPEED DIAL NUMBERS PROGRAMMED

PROGRAM PERSONAL SPEED DIAL NAMES FOR OTHER STATIONS

Each individual station user can program his/her own names but in cases where it is impractical or for single line telephone users, this program allows a system administrator to view or change any station’s speed dial names. The station speed dial codes are 00–49. Each station begins with ten numbers (00–09) and can be assigned more in blocks of ten up to a maximum of fifty numbers.

PROGRAM KEYS

**UP & DOWN** - Used to scroll through extension numbers and speed dial bins.

**KEYPAD** - Used to enter selections.

**SOFT KEYS** - Move cursor left and right.

**SPK** - Used to store data and advance to next program.

**HOLD** - Used to clear previous entry.

**ANS/RLS** - Used to select ALL.

**DISPLAY**

1. Press TRSF and then dial 106

   Display shows

   ![201 SPEED NAME](image)

   00:

2. Dial the station number (e.g., 205) OR press UP or DOWN to select the station and press the right soft key to move the cursor

3. If the selected station has no speed dial bins, this display will be shown and a new station may be selected

   ![205 SPEED DIAL](image)

   SPDBLK NOT EXIST

4. Dial the speed dial location (e.g., 05) OR use UP or DOWN to scroll through the location numbers and use the right soft key to move the cursor OR press the left soft key to return to step 2 above

5. Enter the name using the procedure in *Program Station Names* and press the right soft key to return to step 2 OR press the left soft key to return to step 3

6. Press the F key to access *Program Personal Speed Dial Numbers for Other Stations* OR press TRSF to store and exit programming OR press SPK to store and advance to the next program

CREATE PROGRAMMED STATION MESSAGES

The programmed station message feature lets you set a message at your phone to notify users with Display Phones that you may be out of town. This way, when Display Phone users call their display will show “OUT OF TOWN” and they will know why you do not answer.

The iDCS 500 L/LE system stores 30 messages for you to choose from, numbered from 01-30. Messages 26-30 are special in that you can add a date or time mark to end the message with. For example, the message will display “Return at XXXX” so other people will know when to reach you. The iDCS 100 and iDCS 500 M system stores 20 messages for you to choose from, numbered from 01-20. The iDCS 100 system does not contain any special messages for adding date and time mark.

**PROGRAM KEYS**

UP & DOWN - Select the message number.

**KEYPAD** - Used to enter characters.

**HOLD** - Press to clear entry.
Open customer programming and follow the instructions below.

**ACTION**

1. Press TRSF and then dial 715
   Display shows the first message

2. Dial in the message number (e.g., 11)
   OR press UP or DOWN to scroll through
   the messages and press the right soft
   key to move the cursor

3. Enter in the message using the
   procedure in *Program Station Names*
   and press the right soft key to return
   to step 2 above

4. Press TRSF to store and exit programming
   OR press SPK to store and advance to
   the next program

**SET ALARM/APPOINTMENT REMINDER WITH MESSAGE**

Keyset users can set their own alarms but standard telephone users cannot. The system administrator can set alarm/appointment reminders for other stations in the system.

**PROGRAM KEYS**

UP & DOWN - Scroll through extensions.
HOLD - Press to clear data.
KEYPAD - Used to enter data.

Open customer programming and follow the instructions below.

**ACTION**

1. Press TRSF and then dial 116
   Display shows

2. Dial the station number (e.g., 205) OR
   press UP or DOWN to select the station
   and press the right soft key to move the
cursor OR press ANS/RLS to select all

3. Dial 1–3 to select the alarm (e.g., 2) OR
   press UP or DOWN to select the alarm
   and press the right soft key to move the
cursor OR press the left soft key to return
to step 2

4. Enter the alarm time in 24 hour clock
   format (e.g., 1300) and the display will
   automatically advance to step 5

5. Enter the alarm type from the list above
   OR press UP or DOWN to select the
   alarm type and press the right soft key
to move the cursor

6. Enter the messages using the procedure
   in *Program Station Names* and press the
   right soft key to return to step 2

7. Press TRSF to store and exit programming
   OR press SPK to store and advance to
   the next program
MANAGING KEY ASSIGNMENTS

You can view station key assignments and add extenders to some of the programmable keys for easy one touch operation of frequently used features.

An extender is a number that makes an otherwise general key very specific. Adding the digit “4” to a PAGE key defines this key for paging zone four. Adding “225” to a directed pickup key will define this key as pickup for extension 225 only. The key must already be assigned by the installing technician.

Use this program to assign extenders to the following keys:

<table>
<thead>
<tr>
<th>KEY</th>

</tr>
</tbody>
</table>

PROGRAM KEYS

UP & DOWN - Select the extension number.
KEYPAD - Used to enter extender codes.
HOLD - Used to clear the displayed data.

Open customer programming and follow the instructions below.

**ACTION**

1. Press TRSF and then dial 107
   Display shows the first station

2. Dial the station number (e.g., 205) OR use UP or DOWN to scroll through the station numbers and press the right soft key to move the cursor

3. Enter the key number (e.g., 18) OR use UP and DOWN to scroll through the keys and use the right soft key to move the cursor OR press the key to be programmed

4. Dial the extender according to the list above and the system will display your selection
   If there are no more entries, press the left soft key to return to step 2

5. Press TRSF to store and exit programming
   OR press SPK to store and advance to the next program
PROGRAMMING ACCOUNT CODES

This program is used to add or change account code entries.

PROGRAM KEYS

KEYPAD - Used to enter the account code (allowable digits 0–9).
UP & DOWN - Used to select entry number.
FLASH & TRSF - Used to view and change only the used entries.
SPK/RLS - Used to clear data.

Open customer programming and follow the instructions below.

ACTION

1. Press TRSF and then dial 708
   Display shows [ACCOUNT CODE (001)]

2. Dial the account code entry (e.g., 005)
   OR press UP or DOWN to select the entry number and press the right soft key to move the cursor
   Display shows [ACCOUNT CODE (005)]

3. Enter the account code via the dial pad, e.g., 1234 (maximum of 12 digits) and press the right soft key to move the cursor back to step 2
   Display shows [ACCOUNT CODE (005) 123456789012]

4. Press TRSF to store and exit programming OR press SPK to store and advance to the next program

STATION TIMERS

Each station can have five timers customized for them to accomodate station users with individual work habits. These timers are as follows:

NO ANS FWD  No Answer Forward
This is the amount of time a call will ring at a station before it forwards to the Forward No Answer destination. The default is 15 seconds and the range is 000 to 250 seconds. Make sure that this timer is not set to a greater value than the transfer recall timer or transferred calls will not forward.

DTMF DUR.  DTMF Duration
This is the duration of DTMF tones sent to an analog voice mail port. The default duration is 100 milliseconds and the range is 0100 to 9900 milliseconds.

F-DGT DELY  First Digit Delay
This is the time the system will wait before sending DTMF digits to a voice mail port. The default time is 600 milliseconds and the range is from 100 to 9900 milliseconds.

OFFHK SEL.  Off Hook Select
This timer controls the delay between going off hook (lifting the handset) and the off hook select destination being called. The default duration is 10 seconds and the range is from 000 to 250 seconds.

EFWD DELAY  External Forward Delay
This is the time that a station will ring before a call forwards to the external call forward destination. The default duration is 10 seconds and the range is 1 second to 250 seconds.

Open customer programming and follow the instructions below.

PROGRAM KEYS

KEYPAD - Used to set timer values.
UP & DOWN - Used to select extension number.
SPK/RLS - Save data and advance to next program.

ACTION

1. Press TRSF and then dial 502
   Display shows [201] NO ANS FWD 010 SEC
2. Dial the station number (e.g., 205) OR press UP or DOWN key to select the station and press the right soft key OR press ANS/RLS to select all stations and press the right soft key.

3. Press UP or DOWN key to select the station timer and press the right soft key.

4. Enter the new value via the dial pad, e.g., 0300 and the system will return to step 2.

5. Press TRSF to store and exit programming OR press SPK to store and advance to the next program.

**ADDING NAMES TO THE TRANSLATION TABLE**

This program allows the system administrator or technician to associate a CID or ANI number received from the Central Office with a name programmed in this translation table. If there is no match between a received number and a name in this table, [no CID name] or [no ANI name] will be displayed.

The translation table consists of 400 entries in the iDCS 500 system (1500 on L/LE version) or 350 entries in the iDCS 100 system with each entry comprised of a ten digit telephone number and a 16 digit name. See Program Station Names.

Open customer programming and follow the instructions below.

**PROGRAM KEYS**

**UP & DOWN** - Used to scroll through options.
**KEYPAD** - Used to enter selections.
**SOFT KEYS** - Move cursor left and right.
**SPK** - Used to store data and advance to next MMC.
**HOLD** - Used to clear previous entry.

---

**ACTION**

1. Press TRSF and then dial 728 Display shows first entry

2. Dial entry number (e.g., 005 or 0005) OR use UP and DOWN to scroll through entries and press right soft key to select entry

3. Enter telephone number and press right soft key to advance to name entry OR enter telephone number and press left soft key to return to step 2 above

4. Enter the name using the method in Program Station Names and press right or left soft key to return to step 2 above OR press SPK to save and advance to next MMC OR press TRSF to save and exit programming

**DISPLAY**

1. **TRANSLATION: (001)**
   **DIGIT:**

2. **TRANSLATION: (005)**
   **DIGIT:**

3. **TRANSLATION: (005)**
   **DIGIT:**

4. **TRANSLATION: (005)**
   **SAMSUNG TELECOM**

**DEFAULT DATA: NONE**
CUSTOMER SET RELOCATION

This program is used to swap information associated with two stations. All assignments such as trunk ring, station group, station COS, station speed dial etc. will follow this program. 12 button keysets and 24 button keysets can be exchanged. Basic 7 button keysets can be exchanged with Basic 7 button key sets. Single line stations numbers can be exchanged. If incompatible set types are selected the system will provide an ERROR: NO MATCH message. 12 button and 24 button key assignments should be taken in consideration when relocating these type of sets. The table below shows which phones can be switched with each other.

NOTE: In order to use this program it must first be activated by a technician. Please see your installing company to have this done if you wish to use this program.

PROGRAM KEYS

UP & DOWN - Used to scroll through options.
KEYPAD - Used to enter selections.
SOFT KEYS - Move cursor left and right.
HOLD - Used to clear an entry.

ACTION

4. Press UP or DOWN to change display to holiday assignment

5. Press the right soft key to move the cursor to bottom half of display

6. Enter a desired holiday date (e.g., 1225)

7. Press TRSF to store and exit programming OR press SPK to store and advance to the next program
The iDCS 500 system (with a LAN board installed) and the iDCS 100 Enhanced Software version system provide a feature that self-checks for any failures. If a failure does occur in the iDCS software or hardware, a fault error will be generated and buffered to an alarm report. During an alarm state every phone with an assigned SYSTEM ALARM button will ring and cause the SYSTEM ALARM button to flash amber. A phone with a display should be used so that the alarm information can be viewed. When an alarm occurs, the user can press the SYSTEM ALARM button to view and scroll through the alarms. This will silence the audible part of the alarm, but the SYSTEM ALARM button will continue to flash until your Service Company views and clears the alarms in the alarm report located in the system software.
