

# MICROpendium

Volume 7 Number 9

October 1990

\$2.50

## Keeping track of mileage

An Extended BASIC program to help deal with higher prices

## Inside

- A game of Keno for the Geneve.
- Knitting in BASIC
- An easy way to insert TI-Artist graphics into TI-Writer files.
- More TI Bulletin Board listings
- Tips on making your own printer cables, and using TI-Base

## The game of Dr. Nim.

Yes,  
it's  
challenging

# Software

# Choose from our big selection of software for the TI-99/4A Computer.

Tex Comp continues to stock the world's largest selection of TI Software. The TI Software library on module, disk and cassette and is considered the best in the home computer software field. TI utilized the talents of such industry leaders as Scott Forsman, Milton Bradley, Microsoft Corp., Scott Adams, Addison Wesley Publishing, DLM, Milliken Publishing, Scholastic Inc., Imagic, Spinnaker and the list goes on and on.

## Home Management, Personal Finance, Education, Arcade-type games — all in the big TI Computer software library.

Tex-Comp purchased TI's inventory of these outstanding titles in order to continue its support of the TI-99/4A user

With its five warehouses and financial resources, Tex-Comp has been able to assure you, the TI-99/4A user continued support.

#### \*READ THIS

- Here are some tips to help you when entering programs from MICROpendium:
1. All BASIC and Extended BASIC programs are run through Checksum, the numbers that follow exclamation points at the end of each program line. Do not enter these numbers or exclamation points. Checksum was published in the October 1987 edition.
  2. Long XBASIC lines are entered by inputting until the screen stops accepting characters, pressing Enter, pressing FCTN REDO, cursoring to the end of the line and continuing input.

# GIF MANIA

*The hottest utility of the year has arrived!!!  
GIF Mania is a "must have" for all graphics enthusiasts.*

*Imagine having the world's largest collection of clip-art and scanned images at your fingertips. Sounds like a dream come true, right? Perhaps. But what if dreams did come true... if they did, and they sometimes do, this dream would be called GIF Mania!*

That's right, now all 99ers have the world's largest collection of artwork at their fingertips. For the first time ever, using GIF Mania, industry standard GIF files can be viewed on an ordinary TI-99/4a. In addition, GIF Mania can convert any GIF file into a standard TI Artist file. When in TI Artist format you can do virtually anything can be with the image -- it can be altered, printed, and even be used to create animated movie sequences!

But wait a minute!!! If you don't already know what a GIF image is, you may be scratching your head about now. No need to worry... we'll let you in on this little secret of ours. GIF, which stands for Graphics Interchange Format, is a universal graphics format that was originally developed by CompuServe Information Services. CompuServe (which by the way is the largest provider of on-line information services in the United States) developed this format so that users of all different computers could exchange graphics files regardless of what computer platform (IBM, Apple, Commodore, Atari, or TI) they were using. Well, needless to say, the GIF format took hold and is now a world-wide graphics standard. Over one hundred thousand GIF images exist throughout the world today, many of which are available to you free through on-line services such as CompuServe, Genie and Delphi. In addition, many user group libraries already have GIF files in them.

GIF Mania is not only a true "wonder" program (this is yet another thing the experts said couldn't be done), it's easy-to-use as well. Fully menu driven, GIF Mania puts you in control of the world's largest collection of artwork. **Only \$14.95**

*A small collection of GIF files is included free with GIF Mania. GIF Mania will operate on the Geneve in GPL mode with the same color limitations of the TI-99/4a.*

## Starfleet Technical Drawings III

**Starfleet III has officially been launched!!!** This incredible collection of all new precision drawings features the spacecraft that have appeared in original Star Trek television series, the syndicated Star Trek: The Next Generation television series, and the five Star Trek major motion pictures from Paramount. Drawings included in Starfleet III are: civilian starships from various world members of the Federation (including Earth, Vulcan, Alpha Centauri and Andorian), starships from the Federation adversary worlds (including the Romulans, The Gorn Empire, Orion Pirates and the Tholian Assembly), the latest two versions of the Starship Enterprise as seen on a recent episode of Star Trek: The Next Generation, (1701-B and 1701-C), a chart comparing all five USS Enterprises, numerous recognition charts of Federation, Romulan and Klingon starships shown in scale to each other, and miscellaneous Federation and Klingon starships. In addition to the drawings, each disk of the Starfleet disks includes a small command file that allows the drawings to be viewed in an automated slide show format using Display Master (sold separately). Plus, two extraordinary battle scenes are also included. **\$12.95 for all 4 disks!**

**Special Offer!!!**

**Order all three Starfleet Technical Drawings Volumes for only \$27.95!!!**

## Comments

# Will Triton mail another catalog?

I am not expecting to see another TI catalog from Triton Products. The most recent catalog was mailed in the fourth quarter last year. That's a long time between mailings for a mail-order company. Until 1990, Triton had mailed at least two catalogs per year. As you may know, Triton was bought out last year by Activision, a company with absolutely no connection with the TI market. I hate to see Triton leave the market, but it is inevitable. Sooner or later the company's profits on TI sales was bound to bottom out. This means that two large vendors of TI products have bowed out of the market, leaving only Tex-Comp still standing.

### DIJIT DROPS OUT

DIJIT Systems, which marketed an RGB conversion kit and 80-column card for the TI, is no longer going to produce its 80-column card. Call the Advanced Video Processor Card, the card provides an 80-column display using the 99/4A. Reason for dropping the card is the shrinking size of the market.

But that doesn't mean others aren't producing 80-column cards. Asgard has plans to market the Mechatronics 80-column device — it does not plug into the PEB — and word is that Gary Bowser of O.P.A. will be selling an 80-column board using a 9958 chip that is installed in the 99/4A console. This may be available this fall at a price in the \$150 range. Turning the TI console into an 80-column device strikes me as close to being revolutionary.

### SOME GOOD NEWS

Now here's some good news: More than 60 vendors will be displaying their wares at the Chicago TI Faire, Nov. 3. If I'm not mistaken, that's an all-time high for TI fairs.

### MYARC NOTES

Don't hold your breath, but Myarc was expected to release version .98h of its MDOS program sometime in October. This would upgrade V .97h. If it is released, it would mark the first revision to be released since last fall.

Here is the gist of a download from Delphi about Myarc. It was posted by Beery Miller, who publishes the disk-based 9640 News, and he says the information came from a phone conversation with Lou Phillips.

• Don't look for any new major hardware or software from Myarc. Basically, this means that GEME is

dead.

• There aren't many Geneves currently available. The word is that Myarc had shipped the machine to Triton for fall and Christmas sales, but I doubt many will be sold through that venue. According to Miller, only two unsold Geneves are known to be on dealers' shelves. Myarc is supposed to be working to fill back orders.

• No information was available regarding future shipments of the Hard & Floppy Disk Controller.

Lou Phillips of Myarc is working another job, recently adopted a baby and has just about run out of time for anything but small projects. He personally repairs disk controllers and RS232 cards while sending out HFDC and Geneve's out for repairs, according to Sproull. Lou sounds like a very busy man. As we say in the publishing business, welcome to the real world.

### BETTER THAN THE MAC

Don Shorock's Japanese disks on the TI have proven to be more useful for studying the language than Japanese tutorials done on the Macintosh, according to a 15-year-old high school sophomore who is studying Japanese. "The Shorock program teaches Katakana and Hiragana, the two Kana, or syllabaries, like print and cursive in the Roman alphabet," he says.

### CHANGE OF ADDRESS

Most change of address cards we receive have to do with moving from city to city, or state to state. But change of address cards we've been receiving from some European subscribers reflect country to country changes, such as from West Germany, or the Federal Republic of Germany, to just plain Germany. It's a small change on an envelope but a big change in Bonn and Berlin.

—JK

### READER TO READER

Tom Walsh, 65 Bennett Ave., Binghamton, NY 13905, would like to find a program to maintain the statistics and records for a "fantasy football league."

We regret that we failed to give Olden Warren's complete address last month. His complete address is 4016 Weber Way, Lexington, KY 40514.

Quinton Diggs telephoned to thank persons who answered his two inquiries printed last month. At the time of the call, he had received around 20 replies, he says.

# 60+ vendors to show wares at 8th Chicago TI Faire Nov. 3

Organizers of the Eighth annual TI99/4A fair sponsored by the Chicago Area TI99/4A Users Group, the Chicago TI International World Faire, say that more than 60 vendors of hardware and software are scheduled to have booths at the event Nov. 3 in Rolling Meadows, Illinois.

The Faire is scheduled for 9 a.m.-6 p.m. at the Holiday Inn, 3505 Algonquin Rd., in Rolling Meadows.

A partial list of vendors, according to Hal Shanafield, Faire chairman, includes Bruce Harrison of Harrison Software; Bud Mills Services; Competition Computer; H and H Direct; L.L. Conner Enterprises, TI99/4A and CC40 equipment; Jim Yeaman of Prodigy Services, with the Prodigy Board (a hospitality suite will be sponsored at the Faire by Prodigy Services, a computer network); Notung Software, whose principals are Ray Kazmer and Ken Gilliland; John McDevitt of Rave 99, with the PE/2, a new peripheral expansion box; Roy Hunter of Hunter Electronics; Chris Pratt of ESD, maker of a new hard and floppy disk controller; Mike Sealy and Mickey Schmitt of MS Express; MICROpendium; and a number of users' groups and "generic vendors."

He said potential attendees not yet confirmed at press time included Asgard Software, JP Software, Comproline Software, Oasis Pensive Abucators, Texaments and Myarc.

A number of seminars are scheduled on the TI99/4A and Geneve, including a "surprise out of town guest" brought in at the group's expense, according to Shanafield.

Faire admission to non-members of the Chicago group is \$4. A social mixer will be held from 8 p.m. to midnight Nov. 2.

Admission is \$5.

An After-the-Faire Celebration dinner is scheduled for 6-9:30 p.m. Nov. 3. Admission is \$15 and reservations are necessary.

Shanafield says prices for the event have remained the same as

Informative seminars are a highlight of the Chicago fair for many visitors.

last year though costs for the group has increased.

For more information, contact Shanafield between 2 p.m. and 10 p.m. at (708) 864-8644; the Chicago Area TI Users' Group Hot Line (708) 869-4304; or the BBS, (708) 862-0182.

The Faire is being held in conjunction with the Milwaukee TI Faire, 9 a.m.-5 p.m. Nov. 4 at the Quality Inn, 5311 South Howell Ave., Milwaukee, Wisconsin. Admission to the Milwaukee Faire is \$2 (advance tickets \$1). For more information on the Milwaukee Faire, contact Gene Hitz at (414) 535-0133.

## Features of Triad for Geneve outlined

Triad for the Geneve, by Wayne Stith, is one program that should gain a lot of devotees when it is released. Developed by Wayne Stith, who released Triad for the 99/4A in 1988, provides telecommunications, word processing and floppy disk management functions in one program.

The telecommunications part of the program includes an autodialer, 24K text buffer, and supports ASCII, XMODEM, 1KXMODEM and YMODEM data transfers. It also features macros — up to 76 bytes each — and the ability to boot such

telecommunications protocols as Kermit, ZMODEM and BMODEM. Other features include a script language to automate telecommunications, such as uploading and downloading of files; on-line help screen; and a conference mode with a separate window at the bottom of the screen.

The word processor segment allows the user to hold up to nine documents in memory simultaneously (approximately 90K will be available for files). Other features include true word wrap, the use of highlighted block marking for deleting, copying, moving, printing or saving blocks of

text. Control codes for printers will be executed through macros. Keypresses are largely consistent with TI-Writer. Text files can be loaded and saved in D/V80 format, such as with TI-Writer and MY-Word, and in D/F 128 format.

The floppy disk manager performs all of the normal functions — copying, formatting, etc. — and also has provisions for recovering lost files. The manager also supports some hard disk functions, including copying of files between the hard disk and a floppy, a floppy and a hard disk or between directories on the hard disk.

# Feedback

## Open letter to TI99/4A suppliers

About a month ago, I called 1-800-TI-CARES and requested information regarding availability of software for the TI99/4A. When I found that Tigercub was not on their list, I mailed them a copy of my TI-PD catalog with a letter describing my several years of support of the TI community, and requested that I be added to their list of vendors. I had made a similar request at least twice in the past.

Today I received a reply from Tom Shields, manager of consumer relations of Texas Instruments, stating, "Although we appreciate the information that you provided, we are unable to add Tigercub to our referral list as a third-party supplier."

Today I also received a copy of a letter recently received by a TI user from Consumer Relations of Texas Instruments, stating that, effective April 1, 1984, Texas Instruments no longer sold products for the TI99/4A but "if you are unable to find these items locally, you may want to try companies such as the following: Triton 800/277/6900 and Tenex 800/348/1778." The letter further stated, "We have provided a listing of some third-party suppliers to assist you. While the enclosed list is not comprehensive, we do feel that it may be helpful." The enclosed list gives the addresses and phone numbers of Alboes Computer Supplies, Competition Computer Products, Hunter Electronics, Joy Electronics and Pilgrim's Pride.

Tenex definitely informed me months ago that they no longer carried anything for the TI99/4A, and yesterday I received information that Triton is selling out its stock at greatly reduced prices. The other firms are still in business, as far as I know, but only Joy Electronics is actively advertising to the TI world (*As far as we are aware, Pilgrim's Pride has been out of the TI market for some time. — Ed.*)

I called Mr. Shields for an explanation of his refusal to list my company. He informed me that Texas Instruments had adopted a policy of not adding any more suppliers to its list. He also stated that Texas Instruments wanted only to provide callers with names of firms which had an 800 number, because that is what the

callers asked for.

Texas Instruments is infamous for its poor management decisions regarding the TI99/4A computer, and this is another poor decision. By providing such an incomplete list, they are depriving their previous customers of information regarding the wealth of new hardware and software available, they are giving the false impression that very little support remains and they are discriminating in favor of the few companies they have chosen to list.

However, there is little that we can do about it. People are still pulling TIs out of the closet and picking them up at yard sales. They need a way to find the TI world.

As far as I know, only two newsstand publications still contain the word "TI99/4A." Under that heading, *Computer Shopper* carries one little classified ad — by Tigercub Software! — and the bimonthly user group listing contains the names of 47 TI user groups, out of well over 200, who have bothered to keep themselves listed by FOG. *Vulcan's Computer Buyer's Guide* (still not widely available on newsstands) contains an article by Barry Traver, two classified ads — one of them by Tigercub! — and the bimonthly FOG listing of user groups.

My ads do not bring much response, neither does my other advertising, and I expect to go out of business as soon as I can get my ads and my supplies to run out at the same time. If an offer of more than 400 disks full of public domain at \$1.50 per disk cannot arouse enough interest to make it worthwhile to continue, I cannot see how anyone can afford to continue trying to support the TI community. However, I would like to see the TI kept alive for as long as possible.

I therefore suggest that the TI hardware and software suppliers get together to jointly run an ad in as many newsstand publications as possible, stating that "the TI99/4A is still alive" and providing an address and phone number where people can obtain a listing of suppliers, catalogs, flyers, etc. However, I am *not* volunteering to be that address or phone number!

One more point. MICROpendium is the

one publication that is still holding the TI community together. John Koloen and Laura Burns are extremely generous in publishing product announcements and reviews. Yet only a handful of suppliers are carrying an ad in that magazine. Can't you possibly give them a little support?

**Jim Peterson**  
Tigercub Software  
Columbus, Ohio

*Tom Shields at TI told MICROpendium that TI "has no problem adding third-party suppliers" to its list. He did confirm that they list suppliers with toll-free numbers because that is what customers request. He says also that the company wants to add only companies with an array of hardware and software and which provide an avenue of service in case of a problem with a product.*

## TI-Base problem misunderstood

I think that you misunderstood Mr. Joe Williams' problem regarding the instructions for TI-Base (Feedback Sept. 1990).

What Mr. Williams needs is a set of instructions that will take the various bits and pieces described in the instruction booklet and put them together into a usable data base system. The use of CONVERT and PRINTER by Bill Gaskill is good, but one must have a data file and/or command file in order to use them.

I had the same problem as Mr. Williams until I read the "Readme" file on the V.2.04 disk and obtained the tutorials from Mr. Smoley of the Cleveland Area TI99/4A Users Groups. Following his tutorials has not solved all my problems, but they have made the use of TI-Base a lot more productive.

**Robert L. Criswell**  
Florham Park, New Jersey  
*Feedback is a forum for TI99/4A and Geneve 9640 users. The editor will condense submissions when necessary. We ask readers to restrict themselves to one subject for the sake of simplicity. Mail Feedback items to: MICROpendium, P.O. Box 1343, Round Rock, TX 78680.*

## BASIC

## Fairisle pattern design

By REGENA

I have been busy this past month knitting sweaters (both by hand and by machine) in school colors to try to raise money for our high school athletic teams. Some of the patterns are the "nordic" or "islandic" style with a fairisle color design knit in. This style is a pattern using two or more colors. So that I don't get too bored knitting the same kind of sweater each time, I vary the fairisle pattern with each sweater.

The computer can be used to design the patterns so an actual sample doesn't need to be knit for each variation. And, of course, the TI is ideal with its available colors and graphics. This month's program will let you design a pattern, like coloring in graph paper. After one basic design is made, the pattern is shown by repeating the pattern across the screen.

This program isn't just for knitters. You may use these patterns for border designs in cross stitch or filet crochet or Indian beads, or just for fun on the computer.

I limited this program to use a two-color scheme because I prefer working with only two strands of yarn at a time on each row or round. However, more colors may be added by using two colors on one section of the pattern and two different colors on another section. The first step in the program is to choose the two colors. Use the space bar to step through the colors and press the Enter key to select the colors.

The next step is to choose the stitch repeat, 4, 6 or 12. This means the pattern repeats every 4, 6 or 12 stitches. Most patterns seem to fit in these repeat widths. The 12-stitch repeat pattern is ideal for punch-card knitting machines, and the 4- and 6-stitch repeats may be adapted to that 12-stitch card.

After you have chosen the number of stitches in the pattern, the screen clears and a grid is shown the width of the repeat pattern and 16 rows high. Use the arrow keys on the E, S, D, X keys to move the cursor. Use the Enter key to change the color of the indicated square. When you have completed designing the pattern, press the "P" key to see the pattern.

The computer then starts at the bottom of the graph and prints the pattern across the top six rows of the screen with enough repeats that you can see how the pattern would look. In knitting, each stitch is not really a square. For example, with No. 8 needles and four-ply yarn I get four stitches per inch and almost six rows per inch. The pattern drawn at the top of the screen approaches the knit dimension by using "stitches" 3 pixels high and 4 pixels wide. This involves extra programming calculations to define the 8x8 graphic characters. The subroutines in Lines

2500-3090 define the characters depending on the larger basic design you made.

After the pattern is shown, you may change colors or change the design, or print the pattern on the printer, or end the program. To change colors, select 1 or 2 for the color, and then use the space bar to see the colors and the Enter key to select. All the colors in the pattern will change immediately with the design staying the same.

If you choose to change the design, the cursor appears on the bottom row and you proceed just as before with the arrow keys and Enter key. This time whenever you press Enter, the repeated pattern at the top of the screen also shows your change.

Press "P" for Pattern when you're through designing.

You may get a printed copy of your pattern if you wish. Be sure to put your printer configuration in Line 2050 as you are typing in this program or before you run the program. The pattern will be printed using X and O characters. If you use a punchcard knitting machine, you may then punch a card using this printed pattern.

LS() keeps track of the character definitions. Each character actually has six or eight graph squares in its definition. X\$ is a temporary character definition. XX() contains variables used when changing the design to calculate the present character number and the right way to redefine the appropriate character.

R is the number of stitches in the repeat, and CR is the number of times that pattern may be printed across the screen. RPT is the number of graphic characters in the width of one pattern. CH is the character number.

Lines 810-1110 contain the arrow key procedure in the design process. Lines 1120-1510 condense the 16 rows into six graphics rows. Lines 1540-1690 print the options after the complete pattern is shown.

The characters used in the big design graph are 96 and 98, and you toggle between colors by using the SGN function. After the design is complete, CALL GCHAR is used to see if the square of color is character 96 or 98 for the two colors. Depending on which row the square is located, the appropriate subroutine is chosen to define the character. SEG\$ is used to place "F" or "O" in the character definition in the correct place.

If you prefer to save typing efforts, you may have a copy of this program by sending \$4 to REGENA, 918 Cedar Knolls West, Cedar City, UT 84720. Be sure to specify that you need "Fairisle Patterns" for the TI and whether you need cassette or diskette. By the way, since I am in the middle of fundraising for my son's football and baseball teams, proceeds from this month's disk orders will be donated to Cedar High School. Thanks!

## 1990 TI FAIRS

### FEBRUARY

**TI-Fest West '90**, Feb. 17-18, Day's Inn, 88 E. Broadway, Tucson, Arizona. Sponsored by Southwest 99ers. For information, call (602) 747-5046 or the Cactus Patch BBS, (602) 795-1953, check Genie or write P.O. Box 17831, Tucson, AZ 85730. For room reservations, call (602) 622-4000 by Jan. 16 and mention Fest-West.

### MARCH

**West Coast Computer Fair**, 10 a.m.-6 p.m. March 1-4, Brooks Hall/Civic Center, San Francisco, California. San Francisco 99ers at Booth 1960. Fee \$10 per day, discounts for multiple days. Call Neil Wood, (707) 425-3854.

**TICOFF (TI Computer Owners' Fun Faire — The IBM & Clone Owners' Fun Faire)**, 9:30 a.m.-4 p.m. March 17, Roselle Park, New Jersey. For information, call (201) 241-4550 or the TICOFF BBS (201) 241-8902.

### APRIL

**Canadian TI-FEST**, April 28, Merivale High School, Nepean, Ontario, Canada. For information, contact Ruth O'Neill, 34 McLeod St., Ottawa, Ontario, Canada K2P 0Z5 or (613) 234-8050 or CompuServe 72117.3541 or Delphi REON.

### MAY

**Boston Computer Society Home Computer Fair**, 10 a.m.-4 p.m. May 5, cafeteria, Waltham Central Middle School, 55 School St., Waltham, Massachusetts. Contact Justin Dowling, The Boston Computer Society, TI99 User Group, One Center Plaza, Boston, MA 02108.

**Alberta TI Orphan Reunion**, 10 a.m.-5 p.m. May 12, Innisfail Lions Hall, Innisfail, Alberta, Canada. Contact Fred Kessler, Box 20, Sundre, Alberta, Canada T0M 1X0. Phone: (403) 638-3916.

**TI Multi User Group Conference**, 9 a.m.-6 p.m. May 26, Reed Hall/Student Activities Building, Ohio State University Lima Campus. For information write Lima Ohio User Group, P.O. Box 647, Venedocia, OH 45894, or call Dave Szippel evenings (419) 228-7109.

**Annual Meet of TI99/4A Users Group UK**, May 26, North Gate Arena, Chester, England. Contact Stephen Shaw, 10 Alstone Rd., Stockport, Cheshire, England SK4 5AH.

### SEPTEMBER

**Seattle TI Convention**, Sept. 22, Redmond High School. Call Queen Anne Computer Shoppe TIBBS, (206) 546-1865, Barb Wiederhold, (206) 546-1205, or Russ Norman, (206) 882-2177.

### OCTOBER

**Columbia Northwest TI Computer Fair**, Oct. 27-28, Jantzen Beach Red Lion Inn, Portland, Oregon. Sponsored by NOVA (Ninety-Niners Of the Vancouver Area), Washington, and PUNN (Portland Users of Ninety-Nines), Oregon. Contact N. Michal Calkins, 1215 S.W. Cedar St., Lake Oswego, OR 97034, or (503) 636-1839.

### NOVEMBER

**Eighth Annual Chicago TI International World Faire**, 9 a.m.-6 p.m. Nov. 3, Holiday Inn, 3505 Algonquin Rd., Rolling Meadows, Illinois. Social mixer Nov. 2, dinner after faire. Contact Hal Shanfield, Faire Manager, Chicago TI99/4A Users Group, P.O. Box 578341, Chicago, IL 60657, or (708) 864-8644 (2-6 p.m.); hot line answering machine, (708) 869-4304; or BBS (708) 862-0182 (leave message to #16 **Milwaukee TI-Faire**, 9 a.m.-5 p.m. Nov. 4, Quality Inn, 5311 South Howell, Milwaukee, Wisconsin. Contact Gene Hitz, Milwaukee Area 99/4A Users Group, 4122, North Glenway, Wauwatosa, WI 53222.

## 1991 FAIRS

### FEBRUARY

**Fest West 91**, Feb. 16-17, Ramada Main Gate, Anaheim, California. Contact Fest West 91 Committee, c/o Bill Nelson, 11692 Puryear Lane, Garden Grove, CA 92640, or call Users Group of Orange County BBS, (714) 751-4332.

## EXTENDED BASIC

# Plotting the Flow of Oil

By **JERRY STERN**  
©1990 J.L. Stern

Now that we are paying attention to oil prices again, we'll need software to help us analyze just where that oil is flowing. Individually, we can watch the monthly use of heating oil, or the electricity use from oil-fired power plants, or our gas mileage. Perhaps some bar charts would help us to see patterns hidden in the smoggy exhausts of our gas guzzlers. As the consumption creeps up, we'll know to go for a tune-up, or a general automotive overhaul.

But first, we'll need that bar charting software. BARCHART reads a set of data from a TI-Writer file, requests some basic inputs for titles and scales, and prints out a bar chart of the data from the file. Why a TI-Writer file? First, entering data for plotting any type of chart is too lengthy a process to perform without some sort of editing software. Second, using a file allows multiple copies of the chart, with different scales or titles, from the same keystrokes. Finally, TI-Writer, or any of its equivalent editors, provides a standard type of file that is easily read by a program, and available to all of us.

There are six different bar types. Any bar may be used for any line. Bar number one is black. Bars two, three, and four are progressively lighter gray shades. Bar five is a quadruple stripe, and bar six is a double stripe. The bars are chosen by number in the data file.

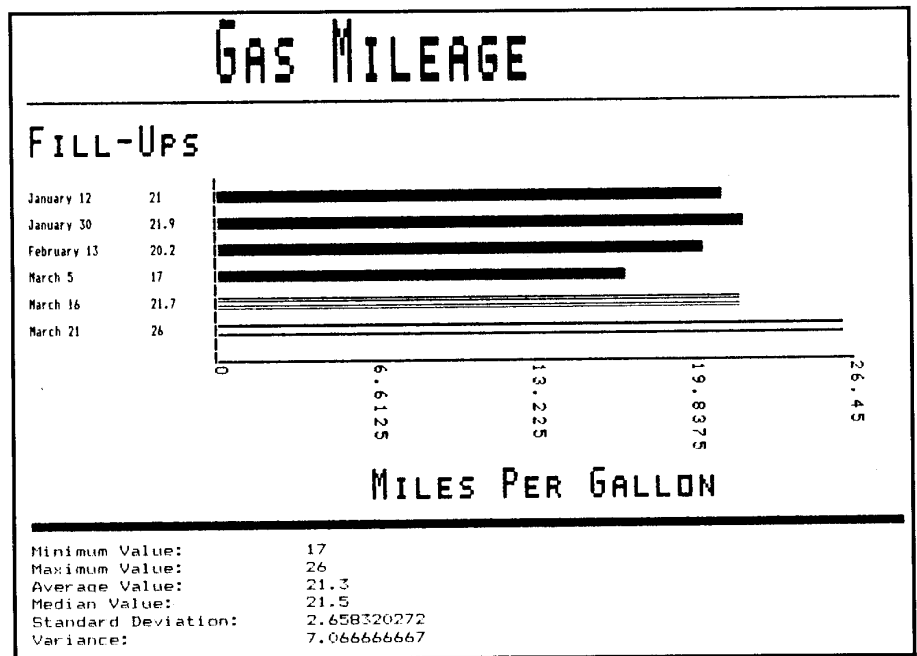

BARCHART is set up to plot up to 100 values. That large a graph would take about three pages. Because these calculations for the graphics are done as the bars are printed, only the data names, values and bar types are kept in memory; so a much longer graph could be printed by just changing the values in the DIM statements.

Before using BARCHART, prepare a data file. From TI-Writer, or any compatible word processor, start with a blank page. Set the first two tabs at columns 17

and 30. Leave the left margin at the default position in column zero. Each set of data name, number, and bar type should be alone on one line. Enter the data names, perhaps the dates of each gas fill-up, in the first column. Use the Tab (Function 7) to move to the second column and enter the data value, probably the Miles per Gallon for that fill-up. The numbers will line up by their leftmost digit, not by a decimal point. That's fine; leave them that way. Tab again, and enter a number from one to six in the third column for the bar type. Do not leave any blank lines in the file. When all the data has been entered, save the file normally with the SF command. (Don't use the Print File command; BARCHART uses the TI-Writer saved file's tab line as

numbers, that will be used at the bottom of the graph. While you're waiting, read the reminder screen—it will review the data file requirements. Next, the program will request the disk number and file name of the data file. The default drive number is one, but that can be changed on line number 240.

BARCHART will read the file, and calculate a recommended range for the bar graph. You may use those numbers, which are about five percent beyond the maximum and minimum values in the data, or zero, or you may enter your own data ranges. You may want to round off the suggested values. Be careful! If your car normally gets twenty miles per gallon, and you set the bottom range number to zero,

an end-of-file marker.)

If you would like the data sorted by either the data label or the data value, this file is compatible with CHARTBASE, the sorting database program published here in May of '89.

Now, run BARCHART. The program will take several seconds to set up the graphics in memory for the bar shapes and the numeric landscape font, or sideways

the graph will show a realistic pattern for the variation between fill-ups. But, if you use seventeen for the bottom range, even minor variations will be misleadingly large on the graph. Of course, the graph is marked with the values used, but such misleading use of graphing ranges is standard advertising practice. Of course, that could be useful....

(See Page 14)

## EXTENDED BASIC—

## (Continued from Page 13)

Next, enter the main title for the chart, and titles for the data names and the data values. For our sample, that would be, in order, "Gas Mileage," "Fill-Ups," and "Miles Per Gallon."

The option that follows allows you to print out some statistics on your data at the bottom of the chart. That information consists of the minimum and maximum values in the data, the average or mathematical mean, the median or middle of the range, the standard deviation, and the variance. Those last two measurements are useful in scientific work, as measures of how much the data varies from a central value, but don't tell your mechanic to tune up the car because the standard deviation of your gas mileage is too high; he'll tune up the car, and charge extra for listening to strange-ness.

Finally, change the printer name if needed, and the graphing will begin. Remember to change the default printer name in line 90 of the program.

BARChart is unusually linear. Most programs branch and twist and tangle, but BARChart passes straight through a sequence of steps in printing the chart. This is possible because the subprograms take care of the usual diversions, like printing the large print headers, and the dividing lines.

**HERE'S HOW IT WORKS**

From line 90 to line 220 is setup. The graphics patterns for the six bars are defined on lines 140 to 190. These can be changed if you like; they are calculated as Epson-compatible graphics characters. Each pair of patterns is duplicated in lines 650 and 680 as needed to draw the continuous bars.

Lines 200 and 210 read the data from lines 920 through 1050 for the numeric landscape fonts that print the sideways labels for the bar lengths. The following lines, up to 490, read the data file and ask for ranges and labels.

Printing begins on line 500. HEADER5 is a subprogram that prints out text up to eight times normal size. It creates the chart title and both axis titles. LINE prints a line all the way across the paper, of from one to eight dots tall. BARChart uses LINE to print a thin line at the top of the

chart, and a thicker line at the bottom.

For each line, the main program prints one line that is blank except for a small part of the vertical axis line, and then prints the data name in compressed type, the data number, and then a section of bar. The bar is calculated as a proportion of the difference between the upper and lower ranges. That means that if the ranges are zero and twenty, and the number to be plotted is fifteen, then the bar will be 75 percent of its maximum length of 700 dots, or 525 dots across.

Each bar is printed in sections of 100 dots. That trick helps reduce printer errors. Yes, printers make mistakes, especially when given very long strings of graphics to print. If you get occasional garbage characters when printing complex graphics, try dividing up the graphics this way; it does help. If you can't change the program, check your printer cables to be sure they are not running next to motors, speakers, or power supplies. There are so many numbers sent to the printer in a graphics printout that the system becomes far more likely to randomly print junk.

The bottom axis of the graph is printed in lines 720 to 740, and then the landscape numbers are printed in lines 750 to 780. Line 750 checks to find out how long the longest data tick number will be. That length becomes the size of the printing loop in 760. In that loop, for the upper and lower range numbers and three intermediate values, each character of the strings containing the tick numbers is matched up, using a POS function, to the landscape graphics font that will print that digit sideways.

Finally, BARChart uses HEADER5 again for the "Miles Per Gallon" label, and calls LINE again, before printing the data statistics and shutting down.

**TIPS FOR NON-EPSON PRINTERS**

Because there are so many uses of graphics in this program, it may not be easy to convert it to run with a non-EPSON compatible printer, but I'll give you the information you may need to try. If your printer needs graphics codes prepared as a number between zero and 255, where zero is blank, and 255 is eight vertical dots, than the conversion should work

fine. If not, try substituting non-graphic characters for the bars, like a capital X.

Line 550: Printer codes 27,48 set line spacing to eight lines per inch, and code 15 turns on compressed print.

Line 570 and in many, many other lines: Codes 27, 76, X1, X2 turn on double density graphic printing, where X1 and X2 are how many data numbers will follow for the graphics information. X1 and X2 are calculated in base 256, and reversed from the usual order; for X1 and X2 of 1 and 5, the data number is  $5 \times 256 + 1 = 1281$ . All of the graphics in BARChart use less than 256 characters at a time, so X2 is always zero.

Codes 27,75, X1, X2 turn on single density graphic printing. The numbers are calculated in the same way, but the dots are printed farther apart on the page.

Line 28250 and in sub LINE: Codes 27, 65, H sets the line spacing to H/72", and code 18 turns off condensed printing.

Line 28270 and in sub LINE: Codes 27, 50 reset line spacing to 1/6"

Of course, BARChart can graph more than gas mileage. Like turkey production figures for the fall season, or Halloween candy consumption. Hmm... Forget the crude oil, it's time for lunch!

## MY-BASIC

# A patch and a game of Keno

By **JIM UZZELL**  
©1990 DDI Software

The following is a patch for the MY-Schedule program published in the August issue. Type it in and run it through CHECKSUM, then save it in MERGE format. Load a copy of MY-schedule and merge this file with it. Then save the program as a new file.

```
2160 OPEN #2:"DSK."&"SCH-DAT
A."&FL$,INPUT .DISPLAY ,VARI
ABLE 80
2170 FOR W=1 TO 19*ML(M) ::
LINPUT #2:AS(W)
2171 IF SEG$(AS(W),1,1)=Q$ T
HEN AS(W)=" "
2172 NEXT W
2180 FOR W=1 TO 60 :: LINPUT
#2:EV$(W)
2181 IF SEG$(EV$(W),1,1)=Q$
THEN EV$(W)=" "
2182 IF EOF(2) THEN 2230
2183 NEXT W :: GOTO 2230
2210 FOR W=1 TO 19*ML(M)
2211 IF AS(W)="" THEN AS(W)=
Q$&Q$
2212 PRINT #2:AS(W) :: NEXT
W
2220 FOR W=1 TO 60
2221 IF EV$(W)="" THEN EV$(W
)=Q$&Q$
2222 PRINT #2:EV$(W) :: NEXT
W
2230 IF K=140 THEN T$=" " ::
GOTO 2240
```

There are a few more bugs in MY-Schedule, but I do not plan to release patches to fix them because MY-Schedule is one step above freeware and was designed as a demo program to show what can be done with MY-BASIC.

MY-Schedule is a hybrid of Appointment Scheduler, which was commercially released more than a year ago. This program was withdrawn from the market because of the lack of interest.

One of the bugs is — if you are at the end of the month or at the end of the year and you select Next Day (right arrow), the current month will be saved and the next month will be loaded, but the screen will not be displayed properly. To get around this, press ESC and reload the month.

This month's article deals with line extraction, and I'm including a program that demos several drawing commands.

There have been many line extractor programs written for the TI99/4A and some have been published in MICROpendium. MY-BASIC makes those programs obsolete. To illustrate, do the following in command mode (A> prompt). Type KEY LIST. We will be dealing with the last item — PPT PIO. Load a program then at the prompt type LPT DSKx.FILENAME (your choice of drive and filename) then determine the line number or line numbers you want to extract. Using the LLIST command, type LLIST Linenumber or LLIST Linenumber-Linenumber. You have just created a D/V80 file in program format. Now you can load this file and save it in merge format for future use. Don't forget to reset PPT (LPT PIO).

The following demo program deals with three drawing commands — DCOLOR, DRAW and FILL — by doing a remake of an old TI game, Keno. See lines 600-820 and 310 for addition.

## THE TI-BASE USER'S GUIDE — 5

# Creating a data file

By **BILL GASKILL**  
©1990 by B. Gaskill

To illustrate what you will end up with after a file has been designed and then saved to disk, we will create a sample file that will be used in storing data from back issues of MICROpendium. But before a file can be created we will need to have a data disk to store it on. So first make sure that you have a newly formatted floppy disk available, and that it is in the active DAT-DISK drive. If you are operating with multiple drives you may do so by loading TI-Base and then typing in the FORMAT directive or you may of course use your favorite disk manager. Single disk drive owners cannot access FORMAT because it is a program segment, something that we will discuss in article No. 7. Assuming that you have the data disk ready and that you have TI-Base up and running, from the dot prompt type in:

## CREATE MICROPEN

CREATE is the directive that is typed in at the dot prompt to start any new file. Besides typing in CREATE MICROPEN you could also have typed in CREATE DSK#.MICROPEN, where the pound sign is the number of the disk drive where the file to be named MICROPEN is to be created.

When you enter CREATE MICROPEN the CREATE screen appears and displays a message that advises you to press the space bar to change (toggle) the data types in a field and that you need to press <Enter> to advance the cursor to the next field. The CREATE editing line appears as follows:

```
FIELD  " DESCRIPTOR  " TYPE  " WIDTH  " DEC
```

## MY-BASIC —

(Continued from Page 18)

```
W
2220 FOR W=1 TO 60
2221 IF EV$(W)=" " THEN EV$(W)
      )=Q$&Q$
2222 PRINT #2:EV$(W) :: NEXT
W
2230 IF K=140 THEN T$=" " ::
GOTO 2240
```

Like most traditional data base and file management programs, TI-Base subscribes to the field, record, file format. That means that MICROPEN will be a file, that contains individual records, and each record will be made up of from 1-17 fields. A FIELD is the smallest element of a file. Data collected in fields make up RECORDS. Records saved to disk under one structure, with one name, make up a FILE.

In TI-Base the Field column is automatically numbered from 1 to 17 as you create each field in the record. The DESCRIPTOR column allows you to enter up to 10 characters to describe or name the input field. Aside from the underline and pound sign characters, you will find that only normal letters and numbers are allowed in field names. The TYPE column is used to define the data that will be entered into the field. Three data "types" are supported, Character, Date and Numeric. You may choose the appropriate type by pressing the space bar to toggle through the available choices or you may simply type in the letter C, D or N to designate the data type. The WIDTH field allows you to specify a maximum length for the input in the field. A maximum of 255 characters per field is

permitted. If you specify a Date field type then TI-Base automatically inserts an "8" as the field width. The DEC column lets you specify the number of digits to appear to the right of a decimal point in a numeric field. A range of 0-99 is permitted.

When you have defined the first field in any TI-Base data base you simply press Enter at the last column of the field and the cursor drops down to the next field definition line. If you are done defining the file simply press F8 to save it. Pressing F9 will abort the effort. Once you press F8 the file definition is written to the data disk, under the name you specified but with a /S extension, and is then ready to accept record input. In fact, you will be asked if you want to APPEND records immediately after the file definition is saved.

To create MICROPEN key in the following structure. It will serve as the basis for the future programs that we create.

```
FIELD  " DESCRIPTOR  " TYPE  " WIDTH  " DEC
-----^-----^-----^-----^-----
*01  "  SUBJECT  " C  " 032  " 00
*02  "  SOURCE  " C  " 020  " 00
*03  "  TYPB  " C  " 015  " 00
*04  "  DATE  " C  " 005  " 00
*05  "  PAGE  " C  " 003  " 00
```

## McCann Software has new address

New address for McCann Software is 4411 North 93rd St., Omaha NE 68134.

Mike McCann of the company says that although it is no longer developing new software for the TI99/4A or the Geneve 9640, it continues to sell and support its products: Business Graphs 99, The Printer's Apprentice, TPA Toolbox, TI-Forth for MDOS, The Geometers Apprentice and TPA for MDOS.

McCann notes that TPA for MDOS will not print under MDOS version .97H because of changes of the MDOS call specifications, published only in Paul Charlton's Genprog package. Because of this and future versions which would have more changes, McCann says McCann Software decided to stop development on new MDOS software.

## USER GROUP UPDATE

These are additions and updates to our user group listings, begun in our May 1987 issue:

### Michigan

Great Lakes Computer Group Inc., P.O. Box 152, Roseville, MI 48066-0152 (new mailing address).

### Canada

Kawawartha 99ers, 224 Woodward Ave., Peterborough, Ontario, Canada K9L 1J7 (change of mailing address).

9T9 User Group, c/o Steve Mickelson, 15 Kersdale Ave., Toronto, Ontario, Canada M6M 1C9 (new address). Meetings monthly except July/August, 10 monthly newsletters and disk of the month. Membership \$30/yr., subscriptions \$20/yr., disk of the month subscriptions \$30/yr. Steve Mickelson (416) 657-1494; Randy Rosetto (416) 469-3468.

**INCREDIBLE SOFTWARE**

GAMES • BUSINESS • GRAPHICS • WORD PROCESSING • UTILITIES • DATABASE • MUSIC • COMMUNICATIONS • HOME

**BONUS**

FREE DELUXE DISK STORAGE CASE WITH EACH ORDER OF FOUR OR MORE DISKS!!!

The TEX-COMP Freeware program is a disk distribution service which is operated to support the TI-99/4A user and programmer and to keep the TI-99/4A the best value in the computer world. The nominal charge (4.95) that is charged for each title is for distribution services only and includes the cost of duplication, premium grade disks, labels, advertising and packaging including plastic disk cases that we include at no extra cost with orders of four or more disks. When a program requires more than one disk side, we supply a floppy or even a second disk at no extra cost. The programs we distribute come from all over the world and are either public domain or the author has expressly agreed to freeware distribution or has placed the program into freeware distribution by providing it to a commercial bulletin board service.

**#1. THE SINGING TI-99/4A SPEECH & MUSIC DISK**

This is the disk everyone is talking about. The computer voice actually sings to animated graphics. Includes routines by master programmer Ken Gilliland. Bert & Earnie, Maltilda & much much more. 2 disk sides, speech & 32 k req. Exbasic autoloader.

**#2. WHEEL OF FORTUNE, BLACKJACK & JOKER POKER**

Three fantastic freeware programs on one disk. Professional quality and the best "wheel" game around at any price. Vanna would love it!

**#3. DUMPTIT**

This disk helps you transfer many TI modules to disk. Recommended for users with some programming ability. Ed/Assembler and "widget" recommended.

**#4. PRINTART**

Two disk sides filled with files that print out great quality pictures on most printers. Many famous TV and comic characters on this disk. "Beam me up Scotty."

**#5 ORIGINAL TI SALES DEMO DISK WITH TI-TREK GAME**

This disk is packed full of assorted files of all types. Graphics, speech etc. Contains complete TI-TREK game for Speech Editor or TE-II module.

**#5A. TI MUSIC/GRAPHICS**

A great collection of music and matching graphics. Great examples of music & sprite programming.

**#6. EXBASIC MUSIC**

A two disk side collection of music & graphics that we consider some of the best.

**#7. SPACE SHUTTLE MUSIC/GRAPHICS**

One of the real outstanding examples of programming. This disk has it all. Great graphics, music, and continuity. A real salute to the space program. It is almost like watching a movie!

**#8. LOTTO PICKER**

This program randomly generates numbers for use in the various state lotto games and even runs a simulated lotto game. Easy to modify for pick 6 etc. games. A great learning and fun disk.

**#9. MONA LISA PRINT OUT**

This disk prints out a near photo quality picture of that lady with the classic smile. We understand it was made by digitizing the original with a super powerful computer and converting the output to run on the TI-99/4A. Impresses everyone who sees it! Requires Epson printer compatibility.

**#10. GOTHIC PRINT**

This disk lets you type out a phrase on the screen and then print it out in gothic (Old English) style. Looks like hand-lettered calligraphy. Use for invitations, announcements and business cards.

**#11. ANIMATED CHRISTMAS CARD "WOODSTOCK"**

This disk was actually originally sent to TEX-COMP as a greeting from master programmer Ray Kazmer. It was just too good not to share! One of the best examples of computer animation and graphics you will see on any computer!

**#12. TI-99 OLOPY**

This great piece of programming actually simulates and plays the famous board game. For legal reasons we cannot name the game but "do not pass Go! but go directly to Jail!"

**#13. STRIP POKER (PG RATED)**

Play Poker against your TI-99/4A. When you win a hand she loses--a piece of her clothes that is. Don't worry about being a lousy poker player. Another file is included where you don't even have to know an ace from a king.

**#14. FIGURE STUDY (PG RATED)**

A collection of Playboy type centerfolds that can be printed out at your command. Use with any printer.

**#15. STAR/EPSON PRINTER DEMO**

This 2 sided disk contains a large collection of demo programs to put your Star/Epson compatible printer through its paces. Learn what control codes can do! Lots of text and graphics examples. Second side has a great tutorial on printer graphics with examples!

**#16. SIDEWAYS PRINTOUT**

This program allows you to print out the material from your printer sideways. Great for spreadsheets, banners and large graphics. Second side contains some new enhancements for Multiplan not available on the TI upgrade.

**#17. TI FORTH DEMO**

This demo disk was released by TI to show the power of Forth. Fantastic music and graphics. Ed/Assem and 32K required!

**#18. TI DIAGNOSTIC**

This program loads into the Mini-Memory module and checks out your entire system. Much better than disk based diagnostics that cannot be used if a problem in the disk system is at fault. Complete documentation on second side.

**#19. TI WRITER/MULTIPLAN UPGRADE**

This disk released by TI adds real lower case to your TI Writer, speed to Multiplan and other enhancements. Easy to use... just substitute new files for old! Instructions included.

**#20. ACCOUNTS RECEIVABLE**

This self contained prize winning program loads and runs in Exbasic and has all the features found in a professional accounting system. Complete with documentation and a second disk side with report generating programs.

**#21. DATA BASE DEMO DISK**

A professional data base program that was originally written to store various magazine articles from computer magazines and then find them by name, subject, key word, or publication. Fast, easy to use and easy to adapt for other applications. Come complete with sample data to make learning data base processing easy. Completely menu driven and unprotected.

# TEX+COMP Celebrating Our Tenth Year FREWARE

•• Public Domain and Shareware for the Texas Instruments TI-99/4A Computer.

ONLY **\$4.95** Per Disk

Public Domain and Shareware Programs to Meet Your Every Computing Need.

FREE DELUXE DISK STORAGE CASE WITH EACH ORDER OF FOUR OR MORE DISKS!!!

**#22. ASTROLOGY**  
This one is as good as anything you will see in an arcade. Great color graphics and displays of the Zodiac. Enter your birthdate and learn about your sign, your lucky days and famous events in history on your birthday. Even prints out a report. Can be used as a great moneymaker at a charity event. Help guide your spouse's career.

**#23. WILL WRITER**  
Enter your answers to a group of computer asked questions and this program then writes you a last will and testament. Now you can leave your TI-99/4A to your favorite nephew. Works with any printer. Appears legal in all states but better check that out!

**#24. ENGINEERING CALCULATIONS**  
A two sided computer handbook of dozens of the most often used engineering and technical formulas. A real time saver. Does conversions, calculations and even designs electrical circuits. A must for anyone whose profession or hobby involves scientific calculations. Even has medical and communications applications.

**#25. MEDICAL ALERT**  
This disk contains many menu accessible files covering most everyday medical emergencies. A good "what to do until the doctor or paramedic comes" guide. Well written and organized. Could very easily save a life!

**#26. R RATED GAME**  
It was bound to happen. A talented (but demented) programmer in Germany wrote an Invaders type game but with most unusual guns and targets. Definitely not what you would find at your neighborhood arcade. Not only a great party game but some great programming. You must be over 18 to order this one!!

**#27. KIDS LEARNING**  
An educator in Georgia put this two sided disk collection of educational programs together. Contains great material. Math, geography, reading improvement, and even IQ testing. All high quality programs for kids of all ages.

**#28. LOADERS AND CATALOGERS**  
We put together a collection of the best programs that catalog and load a group of programs on a disk. Just try them, pick the one you like and transfer it to another disk with the file name LOAD and you are in business.

**#29. LABEL MAKER I**  
Two great programs for making custom labels for disks, addresses, video tapes or any other application. Even contains a graphic display of the TI-99/4A console. Now you can create custom labels of any number by just typing in the lines as you want them. Uses standard tractor labels.

**#30. HOUSEHOLD BUDGET PRINTOUT**  
With this disk you print out the data you have stored with the TI HBM Module. HBM is a great module that can be used for many home and small business applications but TI forgot to include a printout function. This program comes with full instructions and we are sure that your HBM Module will now start being used. Fantastic programming job.

**#31. MORSE CODE TRAINER DISK**  
This disk has everything you need to learn and practice Morse Code for the various FCC license exams. It also is great for scout groups and school "ham" clubs for group training and merit badge qualification. Professional quality.

**#32. EXBASIC XMAS MUSIC**  
Two disk sides full of high quality xmas music that can be played throughout the holiday season and then used as a learning tool since it contains wonderful arrangements and graphics. Autoloading and menu driven.

**#33. CHECKERS & BACKGAMMON**  
A collection of great checkers and backgammon games for the TI-99/4A. These are professional in quality and will keep you busy for hours.

**#34. SOLITAIRE & SCRABBLE**  
Another collection of classic games for the TI-99/4A. Exbasic & 32K req.

**#35. PROGRAMMING AIDS & UTILITIES I**  
A collection of some unusual programs of interest to programmers. One program shows a group of opening title displays, another is a cross reference program as good as any of the commercial ones, plus a great disk management utility.

**#36. STRICTLY BUSINESS**  
A collection of various programs for evaluating loans, calculating interest, and other financial items such as return on investment and security performance. Two disk sides filled with financial and business related programs.

**#37. LAPD COOKBOOK**  
This unofficial police cookbook was put together by one of our boys in blue who is also a gourmet chef. (Yes, it contains jailhouse chili) Over 50 great recipes from soup to nuts on two disk sides and each separate side can be called up on screen or printer in exbasic from a menu. As good as any of the new PC computer cookbooks we have seen.

**#38. GREAT 99/4A GAMES VOL. I**  
A collection of professional games in assembly and exbasic that all load from a menu in exbasic. Includes a great ski game where you dodge the trees in a fast downhill run. We have included only the best.

**#39. GREAT 99/4A GAMES VOL. II**  
Still more of the great ones from all over the world. The quality, graphics and speed of many of these games will make you wonder why they were never released commercially.

**#40. ARTIFICIAL INTELLIGENCE**  
This disk contains the famous computer program "Eliza" where you type in a question or a problem you are having and "Eliza" helps you find the solution. Also contains one of the better bio-rhythm programs so you can analyze all your emotional problems at one sitting.

**#41. VIDEO GRAPHS MODULE BACKUP DISK**  
This disk is a backup of the discontinued Video Graphs Module from TI. For legal reasons, it can only be purchased for backup use by owners of the original module. Do not order UNLESS you have the original module and intend to use this disk only for backup purposes. Exbasic autoloading.

**#42. FUNNELWEB FARM UTILITY**  
You heard about this one, now direct from Australia is the latest version of this fantastic utility that puts everything at your command. From one program you can access word processing, editor assembler, telecommunications and just about everything else. A freeware program complete with documentation on a second disk side.

**#43. BEST OF BRITAIN, VOL I**  
Now for the first time, a collection of the best 99/4A games Britain has to offer including the famous "Billy Ball" series of arcade games. Great graphics, action and excitement.

**#44. LABEL MAKER I GRAPHICS**  
A disk filled with graphics for the Label Maker I disk (#29). Dozens of great graphics for custom labels!

**#45. BEST OF BRITAIN, VOL II**  
This disk contains an outstanding 3-D graphics adventure game for the TI-99/4A. Carfax Abbey lets you actually move through a four story mansion complete with bats and vampires. You actually are placed in each room and go up and down stairs and through secret panels. Legend of Zelda... look out!

**#46. SUPER TRIVIA 99**  
A great trivia game for 1 to 4 players with great questions and capability to add your own and print out the files. This one is a real challenge.

**#47. INFOCOM RAPID LOADER**  
If you have Infocom games this is for you. Loads all TI Infocom games in only 28 seconds and permits new screen colors and improved text display. Comes with all documentation on disk.

Send order and make checks payable to:

Disk

BONUS

FREE DELUXE DISK STORAGE  
CASE WITH EACH ORDER OF  
FOUR OR MORE DISKS!!!

**#48. GHOSTMAN (from England)**  
This Pacman/Munchman type game starts at a slow pace and slowly speeds up to a break-neck pace. A totally new experience.

**#49. DEMON DESTROYER (from France)**  
This great assembly game starts where Invaders leaves off. Add features like descending aliens and closing walls. Hours of great arcade action.

**#50. OH MUMMY (from Germany)**  
Move through the chambers of a Pyramid in search of hidden treasure. Fantastic graphics and great entertainment.

**#51. BERLIN WALL (from Canada)**  
This game requires a mine field to be crossed before escaping from E. Berlin. Good graphics and a real challenge.

**#52. ANIMATION 99 (from Germany)**  
THIS IS THE ONE!!! A demo disk filled with computer animation routines like you have never seen before on any computer. See famous cartoon figures move with more realism than on Sat. morning TV. This disk received a standing ovation when previewed at a local users group. We have even included instructions how to do it yourself on the second disk side. This one is a show stopper!!!

**#53. HACKER/CRACKER**  
A collection of disk copying programs that copy TI disks by tracks. If one of these can't copy a protected disk nothing will. We included a collection of the very best ones including both TI and CorComp compatible. These programs require 2 disk drives and 32K of memory.

**#54. ASTRONOMY**  
This program from Australia plots the heavens and teaches you about the solar system. A great learning and reference tool. Exbasic and 32K required. Don't confuse this one with our Astrology demo. They are not the same...ask Nancy!

**#55. SCREEN DUMP**  
This program allows you to dump disk and even module programs to a Star/Epson compatible printer. Comes with easy to follow plans to build a load interrupt switch which is needed to dump module programs. This dump program by Danny Michael is considered the best of the bunch! Complete with documentation.

**#56. SPREAD SHEET**  
OK, it's not Multiplan but it works great and handles many spread sheet applications. A great way to learn to use spread sheet software. Comes with full instructions and documentation.

**#57. TELCO**  
Considered one of the best data communications programs for the TI-99/4A. Complete with documentation.

**#58. PR BASE**  
The alltime most popular and widely used data base program for the TI-99/4A. A freeware program that is widely supported and updated.

**#59. GRAPH MAKER**  
A collection of the best programs for producing graphs and charts from your data. Exbasic and printer.

**#60. FREDDY**  
A fantastic game where you guide the hero through underground passages filled with danger. Nintendo quality, great graphics and fast action. One of the best we have ever seen!!!

**#61. THE MINE**  
A fast action game from F.R.G. that will keep you going for hours. Many screens and skills required.

**#62. DISK MANAGER II MODULE BACKUP**  
The complete TI Disk Manager II on Disk. For legal reasons it is only available to owners of the original module for backup use.

**#63. ASTROBLITZ/MAZOC**  
A pair of great games that continue where Parsec and Munchman leave off. Imagine Parsec with enemy space craft coming from in front and in back of your ship!!!

**#64. MAJOR TOM/SPACE STATION PHETA**  
A pair of great games. These two are going to keep you in front of the 99/4A for hours. Great!

**#65. PERFECT PUSH**  
An all new space game where you assemble and launch a rocket ship in outer space while avoiding a space monster. This one is professional in very way...graphics, speed and action!!!

**#66. HEBREW TYPEWRITER**  
This program converts your TI-99/4A keyboard into a typewriter that displays Hebrew letters on the screen. Can also be printed when used in conjunction with screen dump program (included). Great for religious training or making your copy of the dead sea scrolls or ten commandments!

**#67. GENEALOGY**  
Now you can set up your family tree and store or print out the records. Great for keeping track of family relationships and records.

**#68. CHESS**  
The original computer chess game Sargon has been reprogrammed for the TI-99/4A. Now play chess with your computer. Documentation included. Exbasic autoloader.

**#69. COMPUTER PLAYER PIANO/KEYBOARD CHORD ANALYSIS**  
A unique music program which displays a piano on the screen and actually plays your selections.

**#70. TI RUNNER II**  
The very latest (and best) "runner" game based on TI Runner and Star Runner. Great action, graphics and entertainment.

**#71. KIDS LEARNING II**  
Two more disk sides loaded with the best in educational programs. Kids improve their math, spelling and comprehension skills while having fun.

**#72. CERBERUS**  
Fantastic space game from Germany. Pilot your ship through narrow and crooked channels in space without colliding. Great graphics and music.

**#73. CRYPTO (gram)**  
One of the best word games we have seen for any computer. Set up like a TV game show with great screen displays.

**#74. LABEL MAKER II**  
Make labels for holidays and special events. You compose the text and select the resident graphics for the occasion.

**#75. DISK CATALOGER**  
Now you can organize your disk files with this great utility. Files, sorts, and prints your records. Easy to use.

**#76. PROGRAMMING AIDS AND UTILITIES II**  
A collection of very useful material. Includes a program to convert basic to exbasic so your old basic programs will load & run in exbasic, even with graphics. Also includes two on screen diagnostic programs to test your keyboard and processor. A great merge utility is also on this disk.

**#77. MICROdex 99**  
A database program by Bill Gaskill which files and retrieves data such as magazine articles. A sample database is included.

**#78. ARTCON+ BY RAY KAZMER**  
ATTENTION GRAPHX AND TI ARTIST USERS!!! This program lets you convert Exbasic graphics to TI Artist and Graphx pictures. Also contains a new MAC+RLE (2) for converting from Artist to Graphx.

**#79. DM1000 V3.5**  
One of the most popular disk managers for the TI-99/4A. Originally a rip-off of the CorComp manager, it has been improved and refined by talented users all over the world. This version is deemed the most reliable to date and is far advanced over the TI Disk Manager II. Distributed by permission from CorComp.

**#80. BIRDWELL DISK UTILITY**  
A must if you are into programming and software development. Besides being a great disk manager, it has provision for copying sectors, comparing files and is menu driven. Complete with documentation.

**#81. HOME ACCOUNTING SYSTEM**  
A complete family & small business accounting system including a checkbook manager, budget analysis, mailing list and an inventory program. Complete with documentation. Easy to modify for specific needs.

**#82. CROSSWORD PUZZLES**  
This program from Australia creates a different puzzle each time you run it. Self contained with definitions and vocabulary taken from a leading crossword dictionary. Great crossword fun.

**#83. HOME APPLICATION PROGRAMS**  
A two disk side collection of useful programs for the home. Includes banking, cooking, home bar guide, utility records, and much much more. Something for everyone.

**#84. GALACTIC BATTLE/SPY ADVENTURE**

A pair of great commercial quality games from EB Software of TI Runner fame. Galactic Battle is a space "trek" type strategy game for one or more players. Spy Adventure is an adventure game that will keep you guessing for hours.

**#85. AUTOBOOT UTILITY**

This utility which can be installed on a disk loads and runs or displays most files. Now you can have a disk with exbasic programs, Editor Assembler programs and TI Writer files and run or display them all from exbasic.

**#86. COLUMN TEXT III V3.2**

A very useful utility for printing TI Writer and 99 Writer II files in separate spaced columns. Saves hours in producing a newsletter. Complete with documentation.

**#87. ARCHIVER III**

This utility allows you to "pack" or combine several files into one for space utilization. A number of boards are sending files packed to save transmission costs. This utility will let you pack and/or unpack these files.

**#88. AUSSIE GAMES VOL 1**

A collection of games from our friends down under. Includes a great card game and board game. Hours of fun and entertainment. Includes Matchmaker & TILO.

**#89. PROCALC**

This is an on screen calculator for decimal/hexadecimal conversions and much more. A must for the serious programmer.

**#90. JET CHECKBOOK MANAGER**

This checkbook manager is considered the ultimate with every feature you can think of for keeping track of your checking account and keeping records of your spending for budget and tax purposes. Complete with documentation.

**#91. "THE MAZE OF GROC" (St. Valentine)**

Ray Kazner has created a great maze game with fantastic graphics and the characters from his now legendary "Woodstock" disk. Fun for all!!!

**#92. HOUSEHOLD INVENTORY**

Written by 99/4 programming great Charles Ehninger, this prize winner originally sold for \$59.95. Keeps track of household, business or personal items by category and provides automatic updating for inflation etc. A must for tax and insurance records!

**#93. THE 1990 KBGB GIRLIE CALENDAR**

This latest offering from programming master Ken Gilliland prints out a jumbo 12 month calendar with a knock-out centerfold pinup for each month. If you like our #14 Figure Study disk, you will flip over this one. For Adults Only!! Exbasic & d/m printer.

**#94. GREAT 99/4A GAMES VOL. 111**

If you have seen vols. 1 & 2 of this series you know we only provide the very best. This latest volume is also filled with a collection of great ones!

**#95. WEATHER FORECASTER**

The weather predictions are amazingly reliable and accurate! A great game "Lawnmower" and a mini database are also included to make this disk a fantastic value.

**#96. STATISTICS & SORTING**

Two great assembly utilities by John Clulow. STAT is a set of statistic routines for use in exbasic. SORT allows sorting by two separate fields and a choice of two types of sorts.

**#97. MEMORY MANIPULATOR**

This powerful utility lets you explore the entire memory in your 99/4A system and take apart what you find. User friendly!

**#98. DAYS OF EDEN & DOORS OF EDEN**

Two bible games (non-fiction) that work with the TI Adventure Module.

**#99. GREAT 99/4A GAMES VOL. IV**

This disk features the works of J. Peter Hoddie. All of these games are of commercial quality and well worth the donation requested!

**#100. ASSULT THE CITY (T. OF DOOM)**

An exciting game for use with the Tunnels of Doom module. Several Exbasic bonus games are included.

**#101. ENHANCED DISPLAY PACKAGE**

This screen enhancement utility lets you do 40 columns, windowing, reverse scrolling, clock/alarm, and a whole host of other great tricks in exbasic. Fully documented.

**#102. COLOSSAL CAVES ADVENTURE**

This classic adventure now available for the 99/4A is what led to the Zork series. Hours of text adventuring.

**#103. SORGAN, THE 99/4A ORGAN**

This program which is currently selling for big bucks on module turns your 99/4A into an electronic organ. Sound effects, different instruments and voices, chord forms, color graphics with complete control of all.

**#104. C99 COMPILER AND LIBRARY**

This two-sided (flippy) disk gets you into C programming with your 99/4A. Comes with a great collection of utilities such as text & graphics. (E/A)

**#105. KING'S CASTLE+**

A great arcade style assembly game formerly offered on module. Also includes an EB "Trek" game and a collection of sprite & graphics from Tigercub's Jim Peterson.

**#106. QUEST (Dungeons & Dragons)**

One of the best D&D games around! You must destroy the Dark Lord to free your homeland! Complete with documentation on disk.

**#107. STAR TREK MUSIC ALBUM**

Ken Gilliland's music and graphics version of the TV theme and the three motion pictures. (Exbasic)

**#108. FUNPLUS BY JACK SUCHRUE**

Fantastic disk packed with Funnelweb (#42) templates, utilities and prog. to augment and configure Funnelweb. Unbelievable collection of fantastic aids to make the best even better!

**#109. TI-WRITER MINI MANUAL**

This disk prints out a five page TI Writer manual with everything you need to know to use TI Writer or the many clones such as 99Writer II. Additional aids for using this powerful word processor are included.

**#110. DISK + AID**

A powerful disk sector editor formerly sold for \$20. Menu Driven and easy to use.

**#111. POP MUSIC & GRAPHICS**

This exciting disk from Germany features music/graphics written in 100% assembly and what comes from the TI sound chip is sure to astound you.

**#112. INVOICE PACK**

An excellent invoice preparation and printing program with instructions on how to modify it for your own business.

**#113. LABEL MAKER 3**

A collection of label programs to create mailing and disk envelopes, disk labels and much more!

**#114. PANORAMA**

A drawing and illustration program that compliments Graphx and TI Artist. A must for the serious 99/4A artist!

**#115. GRAPHICS DESIGN SYSTEM**

A complete system for creating graphic screens in full color for your programs by J. Peter Hoddie. Fully documented.

**#116. FOURTH TUTORIAL**

A lesson in FORTH programming on how to create graphics.

**#117. UNIVERSAL DISASSEMBLER**

This powerful utility written in Forth allows disassembly of programs off disk in any format, in memory, and even off of P-Box cards. Very complete with some very unique features.

**#118. FAST TERM**

One of the most popular and recommended of the 99/4A terminal emulator programs. Supports TE-II, ASC11, and X-Modem transfers, print spooling and more. Loads from Exbasic or E/A.

**#119. RAG LINKER**

A utility for converting DIS/FIX 80 assembly object code files to PROGRAM image. This allows files to load faster and take up less space on disk. Full Doc

**#120. BITMAC**

The original BITMAC is now available at \$4.95 with all original documentation. A powerful graphics program for the 4A which lets you print where you want, even over pre-existing text. Create great graphics in 16 colors, print text sideways, mirror image, upside down etc. etc. A must for anyone into 99/4A graphics. Comes with second bonus disk with utilities such as sign & banner makers. Even can computer generate your own signature!

**#121. SUPER YAHTZEE & WHEEL II**

If you like Yahtzee this disk is for you. A great version written in high speed assembly. Also included is another version of Wheel of Fortune which also lets you create your own puzzles with a puzzle edit program included.

**#122. ADULT ADVENTURE**

A truly adult adventure for use with the TI Adventure Module. Also included is a bonus adventure (not adult) "LOST GOLD" which is one of the better ones we have seen recently.

Send order and make checks payable to:

**TEX+COMP**

P.O. BOX 33084 — GRANADA HILLS, CA 91344

TERMS: All prices FOB Los Angeles. All orders subject to our standard terms of sale. Add the applicable shipping and handling (\$3.00 Minimum). Eastern Massachusetts Add the applicable state sales tax. Prices and availability subject to change without notice. We reserve the right to discontinue.

NOTE: Payment must be accompanied by order. Credit cards, company checks or money orders are made subject to immediate payment. Personal checks require a 30-day wait for clearing before shipment and 60-day sales tax.

## More TI Bulletin Board Listings

The following list of TI Bulletin Board Services was compiled by Mike McGaughey of the Midland 99ers User Group of South Carolina. It was completely updated, as of Sept. 1, 1990. The first installment appeared in the September MICROpendium. This listing will be completed next month.

## Texaments releases fall/winter catalog

Texaments has released its 1990 fall/winter TI catalog, available free on request. The catalog is automatically included with all orders placed directly with the company, according to Steve Lamberti, Texaments president.

To obtain a catalog, write Texaments, 53 Center St., Patchogue, NY 11772, or call (516) 475-3480 (voice) or (516) 475-6463 (BBS).

## Group honors MP

The Users Group of Orange County, California, voted John Koloen and Laura Burns, publisher and editor of MICROpendium, into its TI99/4A Hall of Fame for the month of August 1990.

According to Bill Nelson, the group's awards chairman, the Hall of Fame was created to recognize members of the 4A community who have made significant contributions to this home computer and to encourage continued support.

## Fair cancelled

The Fourth Annual CPUG Computer/Electronics Exhibition, scheduled for Oct. 7 in Palmdale, Pennsylvania, was cancelled by its sponsor, the Central PA 99/4A Users Group.

Reluctance and apathy by members of the TI community were cited as reasons for cancellation by the organizers.

For further information, contact the Central PA 99/4A Users Group, P.O. Box 14126, Harrisburg, PA 17104-0126, or Anthony (Tony) DeDonatis, president, (717) 534-2056.

## KBCC adds service

KB Computer Concepts has moved to a new location and teamed up with the On-Demand Information service. New address is KB Computer Concepts, c/o Bergman, 634 Parks Tower, 3001 West Bancroft St., Toledo, OH 43606.

On-Demand, in Dover, Ohio, may be reached at 300-9600 baud at (216) 343-7717. According to Keith Bergman of KBCC, after a user logs on and reaches the main menu and enters S for subdivisions and 5 for online shopping, he is in the KBCC base. Users can purchase new and used hardware, get information about KBCC software, and get upgrades to existing KBCC programs.

# Get the picture

## Using TML and TI-Artist to brighten your TI-Writer documents

By HARRY WILHELM

One of the most frustrating aspects of being a TI computer enthusiast is the difficulty of combining the output of such excellent programs as TI-Writer and TI-Artist. I've snipped out and rubber cemented pictures onto pages of text more times than I care to remember. TI-Writer+TI-Artist was written to fill that void by making it possible to place TI-Artist format pictures anywhere you want them in a text document.

TI-Writer+TI-Artist requires The Missing Link (available from Texaments) in order to work. It is written entirely in Extended BASIC. Among the features that The Missing Link adds to Extended BASIC are the ability to load and display TI-Artist format pictures and the ability to do a screen dump. Combine that new capacity with XB's ability to read Display/Variable 80 files and send them to the printer and you should get an idea of how such a program could be written. Best of all, that fact that TIW+TIA is written in XB means that you can easily modify it if you want to customize it to suit your needs. And even if you're not a programmer, every user group has at least one expert in Extended BASIC who can help you. This ease of modification is one of the biggest advantages XB has over assembly language. Ever

try modifying an assembly language program when you don't have the source code?

### USING TIW+TIA

As usual, the first thing you have to do is type in the program. Use the CHECKSUM utility if you like and save TIW+TIA to disk once all is correct. Then you have to use the CONVERT utility that comes with The Missing Link to convert it from Program to I/V254 format. Simply follow the instructions on page 23 of the TML manual. (If TML is loaded it will automatically save in I/V254 format, but then you can't use the checksums.)

At this point I have to confess to an error that crept into some early copies of TML and tell you how to fix it. Put The Missing Link disk (preferably a backup) into drive No.1 and Enter OLD DSK1.TML.

Then type 210 and press FCTN X.

If there is an IP\$ in line 210, change it to A\$. (If there's no IP\$ in this line you can skip the next steps.) Then type:

SAVE DSK1.TML <Enter>

SAVE DSK1.LOADER, MERGE <Enter>

After you have saved this modified version of TML, you don't have to follow this procedure every time you load it.

The next thing to do is go into the Editor of TI-Writer. Prepare the text to be printed in whatever way you feel most comfortable. At those places where you want a picture to be printed you simply have to include two lines, as shown below: (Make sure the line of text above the picture ends in a carriage return.)

... text above the picture

+DSK1.PICTURE

.SP 17

Continue with text...

The above example will make the left hand margin of PICTURE come out even with the paragraph indentation point. To move the picture further to the right you can add circumflexes until the picture is where you want it to be, or else you can reposition it in either direction with .IN:

... text above the picture

^^^^^^^^ +DSK1.PICTURE

.SP 17

Continue with text ...

Or:  
... text above the picture  
.IN -5

+DSK1.PICTURE

.SP 17

.IN +10

Continue with text ...

It doesn't matter whether the picture was generated by The Missing Link, drawn with TI-Artist PLUS or converted from another format. As long as it is in TI-Artist format it can be printed. However, you cannot print two pictures side by side.

(See Page 27)

# TI-WRITER & TI-ARTIST—

(Continued from Page 26)

When finished, save the file to disk. Then load the Formatter and print the file. But when asked for the "Print Devicename:" you should type "DSKn.ANY\_NAME" which prints the formatted file to disk instead of to your printer.

After formatting the file, you may want to check to be sure that the pictures haven't been split between two pages. You can do this with PaperSaver or by loading the formatted file back into TI-Writer's editor, or else by simply printing the file with TIW+TIA. If any pictures have been split, you should include a .BP (Begin Page) just above them to force them to begin at the top of the next page.

Now it's time to print the file. Load TML and choose 2 disk files and 16 colors at the prompts. (Choose 16 colors even if you have a monochrome monitor.) Then RUN TML+TIA. Put the disk with the formatted TI-Writer file into a disk drive. (Don't use the original file — use the file that the formatter printed to disk.) When prompted, enter the name of the file that you want to print.

Next you will be asked the question: "Prompt for file-names-of-pictures? (Y/N)" Selecting "Y" for this option will generate prompts that give you time to swap disks when loading a picture or when returning to the text after loading and printing a picture.

Make the appropriate response when asked whether you want to pause at the end of the page and whether you're in NLQ mode. Make sure your printer is turned on, press a key, and you're printing!

## MODIFYING THE SCREEN DUMP

It would be great if you could simply type in TIW+TIA and use it as it is, but since everyone's printer works a little differently it's not that easy. Consequently, you'll probably have to make some small changes to the program so that it works with your equipment. But before doing anything, try out the program as published — you might be lucky and not need to make any changes!

TIW+TIA is set up to work with a line spacing of 1/6 inch. Normally, this is the default line spacing on a printer, but if your printer is set up differently, you should change the line spacing with the appropriate DIP switch.

In line 270 is a variable called LFC. This is a linefeed correction that may be necessary when using NLQ or double-strike characters. Without this correction, my printer gives a slightly shorter screen dump when printing in NLQ, which effects the appearance of the screen dump and the length of the page. The best way to fine tune this variable is by printing a one page document that contains two pictures. Print the document in both draft and NLQ and adjust the value of LFC until the printouts in the two modes match in size. LFC should probably be either 0, 1 or

2. The printer device name in line 320 should match the printer device name that you normally use when printing with TI-Writer or FUNNELWEB.

Just before a screen dump is performed, line 410 will send codes to the printer that set the line spacing to 24/216 inch (or one-ninth inch) plus the line feed correction for NLQ. Your

I have sent you an article that you may wish to consider for possible publication in MICROpendium. The article describes an Extended BASIC program that I wrote called TI-WRITER + TI-ARTIST. What TIW+TIA does is make it possible to easily include TI-ARTIST format pictures in text that has been prepared with TI-WRITER.

FIGURE 1  
Generated by  
THE MISSING LINK

TIW+TIA requires THE MISSING LINK from TEXAMENTS in order to work. In case you don't have it, I've included a copy of THE  
**Sample of Ti-Writer output with graphics (reduced).**

printer manual will tell what codes do this. You may need to set it to 20/180, 16/144, or 8/72 depending on what conventions

## TI-WRITER &amp; TI-ARTIST—

(Continued from Page 27)

your printer uses.

Line 420 is used to set the tab indentation to the value of T. Look in your printer manual for the codes needed to set a horizontal tab position.

When doing a screen dump, The Missing Link goes through a loop 24 times, sending 256 bytes of graphics data to the printer with each loop. Before each of the 24 lines of graphics data is sent, TML sends nine bytes of code to the printer. As written, these 9 bytes do a linefeed, set the line spacing to 24/216", and tell the printer to expect 256 bytes of normal density graphics. Because there was no provision for horizontal tabs, the line spacing controls had to be moved to line 410 of the XB program. This makes enough room to include a horizontal tab (ASCII 9) among these nine bytes. Line 430 changes these bytes to be: 3 backspaces (which are used as fillers), 1 linefeed, 1 horizontal tab, and 4 codes telling your printer to expect 256 bytes of normal density graphics. If your printer uses different codes to set the bit image graphics mode, change the 27,75,0,1 to whatever codes are re-

quired. If you make any changes, make sure exactly nine bytes are sent! Since the backspaces are just there as fillers, you can delete one or more of them as needed to get nine bytes of data.

TML ends a screen dump by sending three bytes to the printer. Normally they reset the printer and do a linefeed. The last thing you want to do is reset the printer in the middle of printing a document, so line 440 changes those 3 bytes to 3 backspaces, which basically have no effect when sent. You will not have to change this line.

After the screen dump has been completed, line 500 restores the linefeed spacing to 36/216 of an inch or one-sixth inch. Consult your printer manual if necessary to find out how to change the linespacing.

Phew! That sounds more complicated than it really is, and once you've made any necessary changes and tested them, you simply save TIW+TIA and your changes will be saved along with it.

Now you can put up those scissors and throw away that bottle of rubber cement!

## TIW+TIA

```

100! TIW+TIA by Harry Wilhelm !179
110! Requires THE MISSING LINK to work. Select 2 disk files and 16 color mode. !140
120! Make sure TML is configured so that the screen dump works properly, then modify lines 270,320,410,420,430,440,500 to suit your particular printer. !143
130! Note the use of PENHUE(1,1) in line 170. Also, no sprites are used in the title screen! !011

# Dr. Nim

## Can you beat the computer?

The following program is by Louis D. King of Sebring, Florida.

The program, called Dr. Nim, is of unknown origin. The game involves removing "sticks" from 3 or 4 piles in a 1, 3, 5, 7 or 3, 5, 7 pile configuration. The player takes turns with the computer removing from 1 to all from any one pile. Play alternates until a player has to take the last stick. Whichever player has to pick up the last stick is the loser.

Input is through the keyboard (documentation is included with the program).

Players will find Dr. Nim a tough opponent.

## Peter Gleed dies

According to the LA 99ers TopIcs, newsletter of the LA 99ers Users Group, Peter Gleed of Australia died recently.

Gleed was coordinator for the TI99/4A Users Group — Melbourne Inc., and editor of the group's newsletter, the Melbourne Times. He was an organizer of the group's TI fair and served as auctioneer during the event.

## MICRO-REVIEWS

**XBASIC and Logo tutorials**

By HARRY BRASHEAR

Ratings for the products reviewed in this column are based on a star system as follows:

★ Leave it alone, back to the drawing board.

★★ Needs improvements, but workable.

★★★ A good program, worth trying.

★★★★ Send your money and buy it.

Hi 99ers. Bet you wondered if this was ever going to appear again didn't you? Well, you can't keep a good TI man down, so here we go with the 20th Micro-review column.

Comments first this month: As John Kolonen explained a couple of months back, I had for the most part run out of stuff to review so I took the summer off, in hope that I would receive lots of goodies to start fresh with this fall. That hasn't really happened. Yes, I have what I need for the moment, but I am still very short of review items. If we miss a month here and there, don't be surprised.

It would also seem that I have given my public a chance to take a swat at me based on the letters pages for the last couple of months. That doesn't bother me. When someone takes the time to call me a "bad boy," I know it's only because they truly respect my opinion and wish to give their own. Fair is fair, but I would like to defend myself on one point, concerning my abbreviated review of the Rave Memory card.

This hardware item has been around now for almost three years, maybe more. No average TIER had any idea of what it was good for, based on the ads and the way it was being marketed, including myself. With no ego intended, there are a lot of people out there that wait for someone like me to say "it's okay!" That's what I did. I looked at the card, determined what it did, that it was an excellent, well manufactured product, well worth the money asked.

I stated up front that the Rave card needed a full-fledged review. I would interpret that as meaning, someone should sit down and complete what I started. To date, no one has done a major review, only taken time to write long letters of critique or saying, "it's okay".

'Nuff said.

★★★★  
EXTENDED BASIC  
TUTORIALS

One of the top user groups in this hemisphere is the Ottawa gang. I can't tell you how many fabulous programs, or how much invaluable information has come from them, DM-1000 included. A quality group generally produces a quality newsletter with topnotch articles, not the least of which has been Lucie Dorais' Fast Extended BASIC column. It has been appearing in Ottawa's newsletter for three years running, read by many of the community's novice programmers. It has been a very good column.

Lucie has now taken all of her tutorials and the accompanying XBASIC programs and put them on three disks. When you boot the disk you are presented with a menu of the program titles. You can select to run the XBASIC program or read the tutorial on the screen. Of course you can go through with TI-Writer/Formatter and print them all out too.

Lucie's programs not only excellent to learn programming, but the finished programs are often educational as well. I thought her flag programs were second to none, including a bit of history in the tutorial, and quizzes in the program. One of the meatiest ideas that Lucie came up with was eliminating all the "busy" stuff from the flags so that people could learn them easier. Emblems were omitted for the most part so you basically work with the patterns, making them easy to recognize. Also, true to the name of the column, the program is FAST.

The price for these three disks is incredibly cheap, \$2 each for DSSD, or \$3 for a pair of SSSD. There are three sets, 1987-88, 1988-89, and 1989-90, the flag program is in the latter. "Harry's rules" apply here, send a disk for the program when it's under five bucks. Send to: Ottawa TI99/4A Users Group, P.O. Box 2144 Station D, Ottawa, Ont. K1P 5W3.

Ask for info on joining this group too, folks. It's one of the better ones, with a huge library.

★★★★  
STARFLEET DRAWINGS III

It's hard to believe, I really thought they were done, could Stephen Barackman be THAT much of a Treky to come up with four more disks of Startrek pictures? In a word, "yes!" Set No. 3 is out, containing four more disks full, 7-10, for a total of 70 pictures to date. As with set No. 2, I shall not bore you with details, but let a sample speak for me.

If you don't happen to recognize that one, don't let it bother you — neither did I. This group contains a lot of ships that may have just slipped your notice because they may have been just sitting in the background somewhere. This group even includes the illusive Enterprise 1701-C that only appeared for a fleeting moment in "Yesterday's Enterprise," one of the 1989-90 season New Generation series.

The four disk titles are: No. 7 — Federation Adversaries and Their Ships, No. 8 — Civilian Starships of Various Federation Members, No. 9 — Miscellaneous Starships Including Enterprise Chart (all of them, scaled), and No. 10 — Starship recognition Charts.

The set of four disks cost \$12.95 plus \$2.50 postage and handling. They're from: Texaments, 53 Center St., Patchogue, NY 11772. Call (516) 475-3480 for COD orders.

P.S. Stephen, just in case you have run out of things to draw, how about a series on Battlestar Galactica.

★★★★★  
TISHUG

Nobody made a mistake there folks, I  
(See Page 34)

## MICRO-REVIEWS—

(Continued from Page 33)

added an extra star — something I have never done before — but this one deserves it. TIsHUG stands for Texas Instruments Sydney Home computer User Group. This is an incorporated group in Australia that in its heyday boasted over 1,400 members. Now they are down to 160 paid-ups. (Poor guys, some of our groups should be so lucky) They have a regular newsletter that they put out that is one of the finest I have laid eyes on. According to the letter I received, in 1989 they produced 12 newsletters with a total of 408 pages. WOW! And we are talking about 8 1/2x12 inch paper, 2 columns and every word completely readable — heavy-weight cover too.

As I browsed through the TIsHUG News Digest, (the name of the newsletter) I was impressed by the fact that this was truly an international publication. Yes, there were reprints from the USA included, but every one had been retyped, edited, and bugs cleaned up on programs, etc. Another thing that impressed me was that TIsHUG seems to be an outlet for the Australian hardware projects, many kits available, and new projects written up with easy to read schematics. A hardware hackers paradise. If anything convinced me that they were doing it right, the treasurers report says they have over \$7,000 in the kitty. That tells me they are a very honest group, with lots of followers. I also took note that they had eight regional meetings a month. How would you like to keep up with that? What a staff they must have.

Along with my newsletter I also received a volume that was labeled TIsHUG November 1988 Tutorial. The title of the article was "Controlling A Small Train Set Using The Wire Accessory Interface and TI99/4A" by Ross Mudie — same size as the newsletter and 56 pages long. Oh my aching back! It contained all of the wiring diagrams necessary, the program object code, plus detailed explanations of everything. I have no idea how this gets distributed, whether it costs extra or what, but it is one fantastic publication.

Let me say that the Aussies have been beating on this computer of ours a lot harder and lot more seriously than we have for a long time. If nothing else con-

vinces you of that, take a better look at your last FunnelWriter disk. They have hardware and software that we haven't seen over here, and from what I can understand it's top notch stuff. This group has a library of over 600 volumes. I bet there's a lot in there that would make you take a second look at your old TI.

Anyway, I would like to recommend the joining of this group. The price is \$24 US for the dues, plus \$12 for surface mail or \$22 for monthly air mail. Take it from me, surface is the pits. It has taken me as much as three months to get a package that way from Australia — GO AIRMAIL, it's worth it. I'm sure you will receive catalogs and stuff with your membership. The address is: TIsHUG (Australia) Limited, P.O. Box 214, Redfern, N.S.W 2016, Australia.

★ ★ ★

### LOGO VIDEO INSTRUCTION

One person that has made her mark on this community, in a round about way, is Eunice Spooner, a teacher in Oakland, Maine. A staunch supporter of the educational TI, she formed the Oakland Computer Club around our machine and proceeded to make her students computer literate with whatever she could lay her hands on. Not the least of her tools has been Logo. TI made the Logo package to teach young children how to program, but unfortunately, in recent years, Logo has gotten trampled under the heels of highly sophisticated languages like "C", Fortran, and XBASIC. None of those languages is suitable for elementary school, though. Good grief, if we older folks don't want to fool with them, why should an eight-year-old?

Anyway, the point I am trying to make is that Logo is a language of choice for kids, and there are a lot of those old packages floating around that nobody wants. If you have young kids at home, dig one of them up the Logo packages, that is. You don't want to dig the kids up until they're 21) and complete the package with Mrs. Spooner's following offer.

This is a three-hour videotape on how to program with Logo. It is divided up in five segments starting with the basic command of TELL TURTLE, and rounding up with

music and sprites. The instruction is handled by showing you a little at a time, just the same way you learned basic on the TI — starting with a simple command and then expanding on it until it actually performs a task. Logo is a very powerful graphics command language, and this tape proves it all the way through.

I recommend this package to anyone with small kids, and certainly to any teacher that has a TI still hanging around the closet. Watching the tape, and performing the functions at the same time will teach anyone how to use the computer.

Mrs. Spooner is requesting a minimum of \$5 for the tape, and \$10 will get you the demo program disk as well. If you're going to be that cheap, Harry's rules apply; send a tape to put the video on. The money goes to support the Oakland computer club. We're going to need these kids in the coming years to keep the TI going, let's support them.

Send your money to: Mrs. Eunice Spooner, Webb Rd. Box 3720 RFD, Waterville, ME 04901.

If you would like me to review your software in this column, send it to the address below, and if you would like it returned, include a SASE. Come on folks, let make this the most exciting TI winter ever: Harry T. Brashear, 2753 Main St., Newfane NY, 14108.

### MADHUG ceases newsletter publication

The Minnesota and Dakota Home User Group has ceased to publish its newsletter because of failure to find an editor for the publication, according to MADHUG treasurer Rich Jurgens.

As the group's \$12 annual dues were used solely for production of the newsletter, members were refunded the difference between the last month of newsletter production and the month of their membership expiration, Jurgens says.

MADHUG still meets 7-9 p.m. the 2nd and 4th Tuesdays of the month in the computer room of the Grand Forks Public Library in Grand Forks, North Dakota.

Jurgens says newsletter publication will resume if an editor can be found.

MADHUG's address is 509 Reeves Dr., Grand Forks, ND 58201.

# User Notes

## Diskreview useful but has small bug

This comes from John Bulakowski, of the Nutmeg (Connecticut) TI99ers. He writes:

Version 4.2 of Funnelweb has a useful utility program called Diskreview. It is a combination disk directory, file review and program loader. With this program you can:

- Call up/print a directory of a disk in any drive.
- Protect/unprotect files.
- Delete/rename/view files.
- Load and run any E/A or Extended BASIC programs.

The last feature is particularly nifty because you don't have to know anything about the program structure that you're trying to run. All you do is place the cursor next to the program that has been listed by the directory feature, press R (for Run), press FCTN 6 (Proc'd), and then a number (usually 1 to 3 in the case of assembly programs) of what the Diskreview program suggests as appropriate. That's all. The selected program will then load and run. No more guesses as to trying E/A 1, 2 or 3. No more wondering what an "object" file is, or its name. I have gotten into the habit of running most of my programs through Diskreview. It's also quick to load and run, which makes it a real competitor to other XB loaders. This, by the way, leads me to the only problem that I have found to date using this.

It appears that this program "seeds" the RANDOMIZE statement in XB programs with the same number each time the XB program is loaded and run. To give a practical example of what this means to the user, let's run an XB program that would generate a random sequence of five, one digit numbers. The following is such a program:

```
1 OPEN #1:"PIO" :: RANDOMIZE ::
FOR I=1 TO 5 :: NUMB=INT(RND*9)
:: PRINT #1:NUMB, :: NEXT I :: CLOSE
#1 :: END
```

If this program is run through Diskreview, it would produce the following sequence on my computer: 3, 5, 1, 8 and 4. If it is loaded and run through Diskreview again, it would generate the same sequence

of numbers instead of the expected different (random) set of numbers. By following this through, any XB program that utilizes a random number generator will always start the same each time it is loaded and run through Diskreview. In the case of a card game, this dooms one to playing the same hand every time.

There are several ways out of this problem. One is to alter the Diskreview program. I'm not smart enough to do this. The other is to clear (FCTN 4) the XB program from running once it has been loaded through Diskreview and then type in RUN (and press Enter). This will clear the "seed" number out and permit the program to run as advertised.

Notwithstanding the above, Diskreview is a fine program.

## 80-column fix for Diskreview

The Diskreview program discussed above has a bug in some 80-column versions that can be corrected with the following changes:

For the 2-file version (DR/DS supplied as DR80 and DR81):

Using a sector editor, locate the value >D068 in file DS. It should be in sector >13 at byte >8E. Do the same for >D069. It should be in the same sector at byte >D6. Interchange the two values and write the sector back to disk.

In the 3-file version of DR, find >D06A and >D06B in the same sector, but one word later, and switch them.

This fix is not necessary on more recent versions of Diskreview. The fix was provided in late July 1990.

## Reminders calendar

Reminders is a date tracking system designed to work with the NotePad screen editor that appeared in the Feb '90 MICROpendium. The system was created by Bill Gaskill. MICROpendium is publishing the various parts of the system over several months. Refer to last month's article and programs for basic information about the system.

The complete Reminders system consists of the following programs;

NPLOAD — Brad Snyder's program that creates the 40-column screen display.

It is a Fairware application and is available from him for \$7. Write to Brad Snyder at, 148 Ave. A, Palmerton PA18071.

NPMENU and NPBROWSE — published in the September 1990 MICROpendium; and NP — published in the February 1990 edition.

NPCALENDAR — a 28-column XB program (see below for listing) to display or print a calendar for any year up to 1999.

NPCATALOG—a system utility for displaying or printing the contents of a disk, or for deleting user selected files from the disk.

NPSEARCH — a program to locate specific information between two dates or between two dates with a text string search parameter.

### CALENDAR PROGRAM

The Calendar program is a 28 column Extended Basic program that I found on one of Jim Peterson's Public Domain disks. I modified it to provide a nicer looking calendar that displays on the screen within a grid.

To use the program simply enter the month and year of the calendar to be generated and then decide if you want it displayed only, or printed and displayed. With either choice, the calendar is displayed and you are prompted to press Y or N to an "Another? Y/N" question.

### MODIFYING NOTEPAD

The last thing that you must do prior to (See Page 36)

# User Notes

(Continued from Page 35)

using the Reminders System is to change line 900 in the NotePad program. To do so, load NotePad, type in 900 and then press Fctn X. When line 900 appears change the word END to:  
RUN "DSK.NP.NPMENU"

Now save the NotePad program under the name NP and you are done.

## FINAL NOTE

You will notice that all path names in the Reminders system are written for a disk that is named NP instead of the usual DSK1 configuration, and all programs in the system begin with the letters NP. Neither of these conventions is required. You may alter them to any path you like and you may call the programs any name that you want to. Just make sure that you alter the NPMENU load choices if you do.

## Getting into XB from Ramdisk OS or boot menu screen

This item is reprinted from the Adelaide (Australia) TI Computer Club. The author is unknown.

In the Horizon RAMdisk Operating System (ROS) and in John Johnson's Boot program for floppy drives it appears that if you want to get into Extended BASIC all you need do is press the O key option. Correct, but a little time-consuming waiting for a DSK1 access for a load program.

Two suggestions follow but I like mine the best.

One suggestion to overcome this delay is to have a tiny XB program selectable from the option screen that loads and executes some code that virtually wipes itself out. Here is the program:

```
10 CALL INIT
20 CALL LOAD(-31952,255,0,255,0)
```

My method of getting into Extended BASIC from the menu screen is to simply press three keys in quick sequence: The X, / and Enter keys. Almost immediate response. How?

Pressing X indicates that I want to run an

XBASIC program and the menu supplies the default option filename DSK1.UTIL1 with the cursor over the 1.

I press 7 changing the pathname to DSK7.UTIL1 because I don't have a drive numbered 7.

When I press Enter, the menu program sets up XBASIC somehow and looks for the program. Not finding a drive numbered 7, it drops out with the screen prompt READY.

## Load CC Manager from E/A Option 3

This program originally appeared in 1984 in the Smart Programmer. It's a routine that is used to load the CorComp disk manager from Editor/Assembler using Load and Run (Option 3)

Enter the program using Editor/Assembler and save it under the name LOADCC/S. Then load the Assembler. Load the program and give it the object file name LOADCC/O and save it using the R,C options. To load the CC Disk Manager from Option 3, enter Option 3, type in DSK1.LOADCC/O for the file name and then type in MGR as the program name.

### Program to load CC Manager from E/A

Labels	Instr	Operands	Comments
	IDT	'LOADMNGR'	title for assembler
	AORG	>2700	Absolute lload address
	DEF	MGR	start name for REF/DEF table
MGR	LWPI	>83E0	get workspace address
	MOV	R11,@>8300	save return address
	LI	R12.>1100	CRU address of dc into R12
	SBO	0	turn on card
	SBZ	11	select correct bank of ROM
	BL	@>44F2	jump to routine in ROM
	NOP		error return
	SBZ	0	turn off card
	MOV	@>8300,R11	restore return address
	B	*R11	go to it
	END		assembler quits here

The disk manager will then load.

## Apple PEEKS

Here are some PEEKs used in Apple BASIC programs. The information may be helpful when converting Apple programs to Extended or Myarc Advanced BASIC. The information was provided by Mike

Callaghan.

Hex

Address	PEEK	Explanation
AA68	-21912	gives default drive #
AA6A	-21910	gives default slot #
C000	-16384	read keyboard

## Tips on making a printer cable

This item appeared in the Cin-Day News, the newsletter of the Cin-Day (Ohio) 99ers. It was written by Gene Bohot.

I helped one of our members make up a parallel printer cable for a new printer, and it turned out to be so easy that I decided to share it so you can make a spare for your system.

The easiest way to do this is to use some insulation-displacement connectors (IDC) and ribbon cable. You don't have to do any soldering, but you can use hooded connectors and 12-conductor cable to make a

(See Page 38)

# User Notes

(Continued from Page 37)

fancier hookup. If you use 16-conductor ribbon cable, use the multi-colored type—it's a lot easier to keep track of the lines. Six feet of it costs about \$3. The 16-pin female IDC connector is about \$2 and the 36-pin Centronics male connector is about \$4.

All you have to do is clamp the 16-conductor ribbon in the 16-pin connector on one end and split the wires on the other end so you can separate the 3 that don't go in order. Notice that the numbering scheme is different on the opposite end of the cable, the the No. 1 pin is marked with an arrow on the computer end and the printer end is marked on pins 1 and 19, and pins 18 and 36. This means that on the printer end, with an IDC connector, you use every other wire slot for 1-9.

Be sure the wire is firmly inserted into each terminal pin so the insulation is displaced (hence the name insulation-displacement connector).

Or you can use 36-connector cable and use every other wire on the 16-pin plug end for 1-9.

## Two-line program copies D/V80 files

The following program was written by Glenn Bernasek of TI-Chips of Cleveland, Ohio. It's called TEXT/COPY and is a

handy routine used to copy any D/V80 file from one disk to another using two disk drives. It runs in Extended BASIC.

Because the program uses more than five screen lines per program line you'll need to press Enter after entering the first five screen lines of each program line and then press FCTN-8 to bring the lines back on the screen. Then cursor down to the end of the fifth screen line and finishing entering the line.

```

100 CALL CLEAR :: INPUT "PUT
MASTER IN #1 AND COPY IN
#2; THEN PRESS <ENTER>." :A$
:: INPUT "ENTER FILE NAME:" :
D$ :: OPEN #1:"DSK1."&D$,INP
UT ,VARIABLE :: OPEN #2:"DSK
2."&D$,OUTPUT,VARIABLE :: LI
NPUT #1:P$ :: PRINT #2:P$ !0
64
110 LINPUT #1:P$ :: IF EOF(1
)THEN CLOSE #1 :: CLOSE #2 :
: CALL CLEAR :: INPUT "<FCTN
/4>&"RUN" FOR MORE OR <ENT
ER> TO QUIT." :A$ :: END :: E
LSE PRINT #2:P$ :: GOTO 110
:: !TEXT/COPY (C)1990 G.W.BE
RNASEK !111
    
```

## Working with sound

This program by Dutch programmer Koen Holtman, doesn't do much, but what it does it does better than any other program. Enter the CALL LOADs and save it as PLOP. Then enter the second program.

Load and run PLOP and then run the second program. The results have to do with sound.

```

1 CALL INIT !157
2 CALL LOAD(16368,79,85,84,3
2,32,32,36,254)!048
3 CALL LOAD(16376,80,76,79,8

## SOFTWARE

### "BOOT PROGRAM"

Copyrighted by the Miami Users Group Feb. 1989. Not available from any other source or Mail Order Co. Latest up-to-date version by the original author, John Johnson.

"BOOT" is in assembly language and uses the Horizon RAM Disk "MENU" program, without a RAM Disk.

You will be able to:

1. View a file
2. Catalog a disk
3. Run a program, XB, EA, or cartridges.
4. Access any program on any drive
5. Even run XB programs over 42 sectors.
6. Print any file or disk catalog.

Send \$7.95 to:

### SUPER MARIO BROS. FOR 99/4A!

A great replica \$9.50! Other titles \$4.00. All use disk, 32K, XB required. TURBO 2056 — fast 2pl racing, over 50 screens. RECON 17 — top secret 1 pl action\*(E/A). LINKAGE — space challenge, 3D graphics, Now try LINKAGE II. FOOTBALL — best 2 pl football on any system. X\*MASTERS sure to drive you nuts \*(EA). 4\*WHEELIN' — Now race off road style. Order separate or try Super Game Pack, any 4 (excluding MARIOS) for the price of 3, \$12.00. Add \$1.50 S&H. CK or MO to BAKER SOFTWARE, 8301 Stevenson Ave., Sacramento, CA 95828. Catalog or COD — (916) 689-6946. v7n9

### TI-PD PUBLIC DOMAIN AND FAIRWARE

400 DISKS just \$1.50 EACH! And orders for 8 or more disks are postpaid.

Thousands of programs selected from the best from the U.S., Canada, Australia, England, Germany, Holland and Belgium. FAIRWARE IS OFFERED BY AUTHOR'S WRITTEN PERMISSION ONLY. Disks as full as possible, arranged by exact category, BASIC programs converted to XBASIC, assembly programs with XBASIC loader, disks with autoloader by full program name.

Send \$1.00 (deductible from first order) for 13-page catalog listing all programs and authors. Catalog also available on disk.

TIGERCUB SOFTWARE, 156 Collingwood Ave., Whitehall, OH 43213 v7n11

## HARDWARE

### TI EQUIPMENT

Too numerous to list. Includes consoles, P-Boxes, speech, cards, including Horizon RAMdisks. Priced dirt cheap: Example — P-Box FULL \$150. Call (813) 681-8954 after 6 p.m. Eastern Standard Time. v7n10

### RAMDISK 384K

With 32K memory replaces 32K card in PE box, wired, ready to add chips up to one meg. Used only short time as a spare, no longer needed. \$250,

## Policy

The cost of classified advertising is 25 cents per word. Classified display (i.e., special formatting or graphics) is \$9 per column inch. Classified advertisements must be paid in advance. Classified advertisers may request a category under which they would like their advertisements to appear, but the final placement decision is the responsibility of the publisher.

Classified deadlines will be kept open for as long as practical. For the purpose of classified advertising deadlines, any classified ad received later than the first day of any month cannot be assured of placement in the next edition. We will do our best to include every advertisement that is submitted in the earliest possible edition.

The publisher offers no guarantee that any advertisement will be published in any particular issue. Any damages that result either from errors in copy or for failure to be included in any particular edition will be limited to the amount of the cost of the advertisement itself. The publisher reserves the right to reject any advertisement.

The advertiser may elect to publish the advertisement in subsequent editions at the same charge, payable prior to publication. The deadline for carryover classifieds is the same as for new advertising.

In submitting an ad, please indicate whether you would like a refund if it is not published in the requested edition or whether you would like us to hold it for the next edition. Cancellations and refunds cannot be made after the second day of the month.

Send classified advertising to: MICROpendium, P.O. Box 1343, Round Rock, TX 78680.
