GAMES TI's PLAY*, THE ELEMENTARY TI-99/4A, COMPUTER PLAYGROUND, INTRODUCTION TO ASSEMBLY LANGUAGE, PROGRAMS FOR THE TI COMPUTER, STARTER PACK I, STARTER PACK II, GAME WRITERS' PACK I, GAME WRITERS' PACK II*, USING & PROGRAMMING THE TI-99/4A

GAMES TI's PLAY with 32 Ready-to-Run Programs!

The authors have compiled a large selection of classic computer games along with many clever new ones. Written in TI BASIC, they are formatted in a way which lets you easily adapt all or portions to your own programs. Each game is explained in clear simple terms—allowing you to customize and modify them to your heart's content! You'll learn text formatting, word games, data statements, and input routines. Many of the games will help you understand how grids are constructed and graphics animated. Helpful techniques let you dissect BASIC programs and learn what makes them tick. Learn programming and debugging from working with these games. 260 pages—spiral bound. Price includes 32 programs on cassette **\$7.95** (\$10.95 on Disk)

THE ELEMENTARY TI-99/4A

Ten chapters lead you step-by-step through the process of hooking up the TI-99/4A, loading and saving programs, creating graphics, music, and all kinds of handy utilities. It is written in a concise and progressive manner so when you are finished you will be writing and using programs. Even if you already are programming, this will provide a lot of helpful information and will appeal to all members of the family. 256 pages—spiral bound. TEX-COMP price **\$2.95**

COMPUTER PLAYGROUND ON THE TI-99/4A

This is the perfect book to provide children, grades 2-6, with their first exposure to the world of computers. Everything is kept simple with over 70 pictures and drawings to color and a series of simple activities to lead the child through elementary computer understanding and programming. Ideal for both schools and computer camps. Contains sample programs and lessons on how to modify and write them. Many illustrations in full color. 128 pages. TEX-COMP price **\$1.95**

INTRODUCTION TO ASSEMBLY LANGUAGE FOR THE TI HOME COMPUTER
BY RALPH MOLESWORTH

This new book is a tutorial for the beginner wanting to learn TMS9900 Assembly Language. Assembly language unlocks the power of the TI Home Computer, allowing the user to write programs that run faster and more efficiently than programs written in high-level languages like BASIC. This is a step-by-step instructional text for the person who is familiar with TI BASIC but cannot understand the TI Editor/Assembler manual. There are program examples included that may be used by those with Editor/Assembler or Mini-Memory. Whether you wish to begin writing complete assembly language programs, short assembly routines, or if you just wish to have a better understanding of how your home computer works, you will get the knowledge you need from this easy-to-read guide. Edited by Steve Davis. **SPECIAL...\$4.95**

PROGRAMS FOR THE TI HOME COMPUTER
BY STEVE DAVIS

Fifty unique programs in TI BASIC and TI Extended BASIC are presented in an easy-to-read format, ready for the user to type in and use. Most of the programs are listed in TI BASIC and may be used with just the computer console and a cassette recorder, while others take advantage of the special capabilities of optional TI modules and peripheral equipment, such as TI Extended BASIC, Mini-Memory, Terminal Emulator II, the TI Speech Synthesizer, a printer or the disk system. A wide variety of programs for home applications are featured, including games and entertainment, educational programs, programming aids and more. Best of all, this volume offers programs that highlight the many unique features of the TI Home Computer, such as color, graphics, music, sound or speech. Beginners and experienced TI Home Computer users alike will find this collection to be an entertaining and useful addition to their program library. **SPECIAL**

*READ THIS

Here are some tips to help you when entering programs from MICROpendium:
1. All BASIC and Extended BASIC programs are run through Checksum, the numbers that follow exclamation points at the end of each program line. Do not enter these numbers or exclamation points. Checksum was published in the October 1987 edition.
2. Long XBASIC lines are entered by inputting until the screen stops accepting characters, pressing Enter, pressing FCTN REDO, cursoring to the end of the line and continuing input.

MICROpendium DISK SALE

If you've been waiting for a sale on MICROpendium program disks, this is it! For a very limited time (through Nov. 31, 1991) Series 1, 2, 3 and 4 disks are available for a special price. Series 1 disks include all programs that appeared in MICROpendium from April 1988 through March 1989. Series 2 disks include all programs that appeared in MICROpendium from April 1989 through March 1990. Series 3

disks include all programs that appeared in MICROpendium from April 1990 through March 1991. Series 4 disks include all programs that appeared in MICROpendium from April 1991 through March 1992. (Series 4 disks are mailed monthly starting with the November 1991 edition, programs from April 1991 through October 1991 will be mailed as soon as the orders are placed.)

OFFER EXPIRES NOV 30, 1991

MICROpendium disks

SERIES #	REGULAR PRICE	SALE PRICE	SAVINGS	DISCOUNT
Series 1 (Apr. '88-Mar. '89)	\$25.00	\$15.00	\$10.00	40%
Series 2 (Apr. '89-Mar. '90)	\$25.00	\$15.00	\$10.00	40%

Comments

Cold but fun, and what's for Christmas?

The Chicago TI fair hadn't even ended when Don Jones told me that next year's fair would be held at an earlier date in hopes of taking advantage of warmer weather. This year's fair, held Nov. 2 in subfreezing temperatures, was well worth the trip. But the frigid temperatures were unexpected. But what can you expect from November in Chicago? So, as Don said, next year's fair will be held in October. October 31, to be exact. Three days can make a difference.

I finally got to try a game that made its official debut at the fair: Scud Busters by Bruce Harrison. I played it for several hours at the office before I had to get back to work. And you thought Bruce was strictly into music.

I didn't get around much at the fair, having to man a table for nine hours, but I spoke with scores of readers and some of the vendors. Everyone seemed to be having a good time. In fact, there may have been a convert or two, including one who came over from Appleland. The following event actually happened, according to Ken Gilliland of Notung Software, at the Milwaukee fair, which was held Nov. 4.

"I had a person circle my booth about four times, intently eyeing Ray Kazmer's Star Trek: Next Generation Calendar. He finally got up some nerve and asked me if there was any way he could run the calendar on his Apple IIe. I told him no, there wasn't, unless he had a way to get his Apple to read a TI disk or had a friend with a TI machine. Discouraged, he walked away. Within the next two hours, he returned no less than three times to study the manual and calendar pages. Finally, near the close of the show, he returned once more, this time with a PE Box and used console — asking if he needed anything else to run the program! And, yes, he did get the Star Trek Calendar and a TI Casino to boot."

Either this buyer is one heck of a Trekkie, or Ray need to be charging more for his calendar.

PC-TRANSFER AVAILABLE AGAIN

Several of Mike Dodd's programs which had been unavailable for a long time are available again from two dealers, including PC-Transfer and PC-Transfer Utilities (see Newsbytes). The Utilities, a companion disk to PC-Transfer, gives users the capability of transferring Multiplan SYLK (I/F128) files to a PC. The program also supports transfer of binary image (D/F128) files as well as 7 and 8 bit text files, "TIFILES" downloaded with a PC and MacPaint files.

MICROPENDIUM SALE ENDS NOV. 30

The special sale of MICROpendium back issues (the first and last) will end on Nov. 30. If there are any nback issues you've wanted to buy, now is the time to buy them. The cost is only \$1.50, down from the regular \$2.50. Special prices on MICROpendium program disks will also expire on Nov. 30.

STILL WAITING

It's been six months since I shipped my broken HFDC to Myarc, with payment of \$75. And still no word. The rumor going

around is that Lou Phillips has 20 HFDC's that have been repaired sitting in his garage waiting to be returned to their owners. I've heard of some people volunteering their time to get the items back to their owners. If only it were so easy. What a way to run a railroad.

WHAT TO BUY A TI OR 9640 USER FOR CHRISTMAS?

This is a tough question to answer. There are many choices, depending on your budget. High-end items, like the Rave PE2 expansion system, Horizon RAMdisk or MEMEX card will set you back more than \$100 but can be well worth having. Those with a Horizon RAMdisk who want to upgrade to newer, bigger models can sell their existing RAMdisk and the buyer will receive a 90-day warranty on the RAMdisk from Bud Mills Services, as long as the seller buys another RAMdisk from Bud.

One item that has generated considerable interest is the TI Accelerator card. This device was highlighted in the July 1991 MICROpendium. Unfortunately, it is not available at this time. Bud Mills Services is the manufacturer.

GRAM devices, such as the GRAMulator and P-GRAM Card, GRAM Kracker are very handy for those who want to dump their cartridges to a disk and run everything out of a disk-based system. Other items to look at for those who want to cut down on the wear and tear on their console module port are so-called cartridge expanders which allow the user to plug several modules or module GROMs into a single device and switch between them via software or a switch. Among the newer models of these types of devices are POP-cart by OPA and E/B Module Expander by William Shores.

Perhaps the hardest to get items these days are Myarc HFDCs and Geneves. You'll have to look hard to find a new HFDC or Geneve, but you can check the MICROpendium classifieds for used models.

There is so much good software available for the TI that it is impossible to list it all. Regular readers of MICROpendium can add up the titles that debuted in 1991 but looking through the Newsbytes section, but just in the past month or so we've seen GenBench Shell, P-System, GEME, Space Champions, Cave Explorer, Train Twister, Time Guardian, Jungle Terror, Traffic Frenzy, Islander, Car Race, Submarine Revenge and Sea Terror for the Geneve. Recent releases of software that run on both the TI and the Geneve include Scud Busters, Code Breakers, Go-fer, Thumbnails, Mail Room, SGW, Sound F/X, along with three companion disks, Smart Connect, Bride of Disk of Dinosaurs and Disk of Horrors, and upgrades of MIDI-Master, TI-Casino and Filmlib. And this is by no means a complete list.

Of course, as far as I'm concerned, the one thing that I'd like most for Christmas I probably won't get. And that is my HFDC. Now, I've got to have a copy of 9640 Windows, and Sound F/X and I really need to upgrade my TI-Casino, and

Feedback

Are you afraid to look under your bed at night?

KEN GILLILAND'S

VIEW OF

HORRORS

If you are afraid of the dark, you'll definitely NOT want to get "Disk of Horrors". This package is a spine-tingling look at the 1930's Horror Pulp World with the aid of 30 TI-Artist Pictures and Instances guaranteed to put your hair on end. Also included is a **WOWWWW** font, some truly gruesome animation, a spooky slideshow, a musical nightmare, a history of the Horror Pulp, and three short stories, printable or readable onscreen, by Ken Gilliland. This three disk package with manual sells for \$12 from Notung Software. Add \$1.00 P&H.

NOTUNG SOFTWARE

7647 Mc Goarty Street, Tujunga, California 91042

Wants a final DOS

I like my Geneve and I have several TI994As doing lots of little things (and providing spare parts).

I only wish we had the final solution for MDOS. I would really like to take full advantage of my Geneve, but for now I work solely in GPL.

What can we do?

There must be *somebody* out there who can take over, or write a new DOS.

Geoff Frusher

Lake Echo, Nova Scotia, Canada

Where's PC Transfer?

In your article on TI-PC connection you refer to a program "PC Transfer." Do you know where I can obtain this program?

Richard S. Schultz

Carmichael, California

See below. — Ed.

A great guy provides PC Transfer program

In August you printed my letter. I had stated that I was in desperate need of the PC Transfer program to get my TI text files to be IBM compatible. I even said that I would settle for a pirate copy (gasp!)

On Oct. 30 I received a strange disk in the mail. I didn't know if it was a TI or PC disk. Something told me to check it on the TI computer first. Sure enough, it was the PC Transfer program! Here is the best part; I never met the sender in person, or even talked to him on the phone. I didn't even know that he existed! This disk came from a great guy, *Kurt Radowisch in Vienna, Austria!*

Kurt went through the trouble of finding my *correct mailing address*, seeing how only my name, city and state were published. Kurt didn't ask for anything in return, he only hoped I received the disk and that he would get a reply. Is this guy a 99er, or what!? The instructions weren't even in English! I had it figured out in one minute, though. I sent him a few of my own graphics programs in appreciation.

Let this be an inspiration, and a lesson that the *TI99/4A is not dead!* The users are still willing to help each other. Even

strangers from other states!

Frank P. DeCandia

Jersey City, New Jersey

We agree, Mr. Radowisch sounds like a great guy. However, other users need not hope that someone from Austria finds them. PC Transfer is now commercially available once again. See Newsbytes this issue for where it can be purchased.

Update on SAC TIBBS

You may recall that I was one of the first to operate a TIBBS BBS. I have operated SAC TIBBS since 1984 continuously and plan to continue as long as there are users interested in the TI99/4A. Over the years I have incorporated many changes and updates to the original TIBBS program. Now it is one of the two, possibly three, TIBBS BBSes that is capable of operating at 2400 baud.

It is PC Pursuit and Starlink available using 8NI 24 hours a day. Area code (916) 927-3012. Sysop is Woody Large. Instant validation permits downloading of many files and programs immediately.

At 75 years of age, I may be the oldest TI sysop.

Woody Large

Sacramento, California

Second the motion

This refers to Stan Krajewski's report on 99 Computer Repair in the October issue. I wish to add my enthusiastic second to his favorable review. Recently my CorComp 9900 Micro-Expansion System's power supply went dead. I sent it to 99 Computer Repair, and within three weeks I had it back in good working condition. The service was good and the charge was reasonable. All owners of CorComp products should be thankful we still have a reliable source for repairs even though CorComp is now defunct.

James B. Johnson

San Antonio, Texas

The Feedback column is a forum for TI99/4A and Geneve users. The editor will condense submissions when necessary to conserve space. We ask readers to restrict themselves to one subject for the sake of simplicity. Mail Feedback items to MICROpendium Feedback, P. O. Box 1343, Round Rock, TX 78680.

BASIC

Using string functions

By REGENA

Most computing done on the TI99/4A is with numbers. However, some information can be treated as *strings*, or groups of characters that are not necessarily numbers. Since we use a lot of names or words other than numbers in everyday life, we need to be able to use strings on the computer.

One way to signal to the computer that you are using a string is to enclose characters within quotation marks. PRINT 3+5 will print the number 8, but PRINT "3+5" will print exactly what is in the quotation marks, 3+5. To use a string variable, end the variable name with the dollar sign, such as A\$ or NAME\$.

String expressions may contain letters, numbers and symbols, and they may be up to 255 characters long. Longer strings are truncated on the right.

Strings are combined in TI BASIC by using the ampersand, such as A\$&B\$ or "HELLO "&NAME\$. Several functions available in TI BASIC are specifically for strings. Any function that ends with a dollar sign gives a string as a result. Some functions use strings in the argument but give a numeric result. You cannot combine string and numeric expressions.

This first sample program, STRING\$1, defines the string variable A\$ as "HI" and the string variable B\$ as "CINDY". Line 140 prints the two variables separated by a semicolon. Notice that the semicolon indicates the next item to be printed follows the first item immediately with no spaces. Line 150 inserts a space between the two strings. Line 160 illustrates a more grammatically correct combination of the words by inserting a comma and a space between A\$ and B\$. Line 170 prints A\$,B\$. A\$ is printed, then the comma puts B\$ in the next print column. Line 180 prints A\$ then the colon says to go to the next line before printing B\$.

```
100 REM STRING$1
110 CALL CLEAR
120 A$="HI"
130 B$="CINDY"
140 PRINT A$;B$
150 PRINT A$," ";B$
160 PRINT A$;"," ";B$
```

```
170 PRINT A$,B$
180 PRINT A$:B$
190 PRINT
200 END
```

LEN(x\$) is a string function which gives the length of the string x\$, or the number of characters contained in x\$. In TI BASIC you may have a null string ""; the length of a null string is zero. Leading and trailing blank spaces are counted in the number of characters for the length. In the following example, Line 150 calculates the length of the string variable A\$ and assigns it to the numeric variable L. Line 160 prints L.

SEG(x\$,n\$,n2) is the SEGment function and is comparable to LEFT\$, MID\$ and RIGHT\$ of other versions of BASIC. SEG\$(x\$,n\$,n2) will return the segment of string x\$ starting with the character in the n1 position and continuing until the segment is n2 characters long. In the following example, Line 130 prints the segment of A\$ starting with the first character and containing 5 characters. Line 140 prints the segment of A\$ starting with the 7th character and containing 4 characters.

POS(s1\$,s2\$,n) is the POSition function. s1\$ and s2\$ are string expressions. The numeric expression n is evaluated and rounded to an integer. POS finds the first occurrence of s2\$ within s1\$, starting at character n. The value returned is the character position of the first character of s2\$ in s1\$. If s2\$ is not found, a value of zero is returned. In the following example program, Line 170 assigns P the value of the position of the space, " ", in the string A\$, starting with the first character. Line 180 prints what position that is. Lines 190 and 200 then print segments determined by that position P.

```
100 REM STRING$2
110 A$="BRETT LYNN"
120 PRINT A$
130 PRINT SEG$(A$,1,5)
140 PRINT SEG$(A$,7,4)
150 L=LEN(A$)
160 PRINT "LEN(A$) =" ;L
170 P=POS(A$," ",1)
180 PRINT "POS =" ;P
190 PRINT SEG$(A$,1,P-1)
```

```
200 PRINT SEG$(A$,P+1,L-P)
210 PRINT
220 END
```

The third example program, STRING3, illustrates the functions ASC and CHR\$. ASC(x\$) returns the ASCII value of the first character of the string x\$. Line 130 prints the ASC(A\$), which will be the ASCII value of the first character in A\$. CHR\$(n) prints the character corresponding to the ASCII number n. Lines 150-170 print a number J, then the CHR\$(J) or the character corresponding to that ASCII number.

```
100 REM STRING3
110 A$="RICHARD"
120 PRINT A$
130 PRINT "ASC(A$) =" ;ASC(A$)
)
140 PRINT
150 FOR J=65 TO 70
160 PRINT J;CHR$(J)
170 NEXT J
180 END
```

I have published this subroutine before, but it fits here with the discussion of strings. If you want to print a message on the screen without scrolling, or if you want to print a message at a certain position on the screen, use this subroutine. Put the message in M\$, and specify the ROW and COLUMN. Lines 300-330 are the subroutine that use CALL HCHAR to place the message on the screen a character at a time. First the segment SEG\$ of the message M\$ is taken one character at a time, and the ASCII code of that character is needed for the CALL HCHAR command. The process is repeated for the length LEN of the message. Two example messages are printed.

```
100 REM MESSAGE
110 CALL CLEAR
120 M$="PRINTING . . ."
130 ROW=10
140 COL=5
150 GOSUB 300
160 M$="EXAMPLE"
170 ROW=15
180 COL=17
190 GOSUB 300
```

(See Page 10)

REGENA ON BASIC —

(Continued from Page 9)

```

200 STOP
300 FOR C=1 TO LEN(M$)
310 CALL HCHAR(ROW, COL+C, ASC
(SEG$(M$, C, 1)))
320 NEXT C
330 RETURN
340 END

```

The following MONTHS program illustrates a way to correlate the names of the months with the month numbers. One way to program using months is to have an array of 12 elements, such as M\$(1)="JAN", M\$(2)="FEB", etc. Another way to program is to use strings.

```

100 REM MONTHS
110 CALL CLEAR
120 M$="JANFEBMARAPRMYJUNJU
LAUGSEPOCTNOVDEC"
130 PRINT "THE MONTHS ARE"
140 FOR M=1 TO 12
150 PRINT M, SEG$(M$, M*3-2, 3)
160 NEXT M
170 PRINT
180 RANDOMIZE
190 M=INT(12*RND)+1
200 PRINT "MONTH";M;" IS ";SE
G$(M$, M*3-2, 3)
210 PRINT
220 A$="MAY"
230 PRINT A$;" IS MONTH";INT
((POS(M$, A$, 1)+3)/3)
240 END

```

The string M\$ contains the three-letter month names all combined into one string. Lines 130-160 print the 12 months in order by using the SEG\$ function to pick out three letters at a time. If you still wanted to use an array, you could use Line 150 to define M\$(M)=SEG\$(M\$, M*3-2, 3). Thus lines 140-160 would define all 12 months rather than using 12 individual statements or a DATA-READ system.

Lines 180-200 illustrate how you would determine the month name later in the program using the string method if you had a month number. Lines 220-230 illustrate how you would determine the month number if you know the month name.

I have one more sample program il-

lustrating the use of strings. This example was sent to me by Stephen Shaw of Stockport, Cheshire, England, as a recommendation to speed up the shuffling of cards in card games such as Pyramid Solitaire (MICROpendium, April 1990). My method took 18 to 30 seconds, usually about 22 seconds, from the time you press Enter to when the first card starts drawing. Using his method, shuffling took 19 seconds (constant).

Let me just mention our main discovery. The program can be run as is in TI Extended BASIC because I don't use graphics characters in sets 15 and 16. However, the shuffling time (my method) took 40 seconds the first time I timed it and 1 minute 37 seconds the second time. Of course, that's long enough never to run the program again! And long enough for Mr. Shaw to write to me. Here's a case where TI BASIC was quicker than Extended BASIC.

I have used several different methods of card shuffling in my past programs — choosing a random number from 1 to 52 and translating to a number and suit, or choosing a random number from 1 to 13 for the number and then from 1 to 4 for the suit, and making sure the card hasn't been chosen before. This method using strings is worth trying.

```

100 REM SHUFFLE
110 CALL CLEAR
120 DIM CARD(52, 2)
130 C$=""
140 FOR N=1 TO 52
150 C$=C$&CHR$(N)
160 NEXT N
170 RANDOMIZE
180 FOR N=1 TO 52
190 CD=INT(RND*LEN(C$))+1)
200 @=ASC(SEG$(C$, CD, 1))
210 C$=SEG$(C$, 1, CD-1)&SEG$(
C$, CD+1, 52)
220 SU=INT((@-1)/13+1)
230 NU=@-(SU-1)*13
240 CARD(N, 1)=NU
250 CARD(N, 2)=SU
260 PRINT STR$(NU)&" "&STR$(
SU)&" "; ";

```

```

270 NEXT N
280 END

```

Lines 130-160 initially define a string variable C\$ of 52 different characters representing the 52 cards. Line 170 randomizes the selection. Lines 180-270 shuffle the cards. Line 190 chooses a random number CD. Line 200 selects the character in the CD position and finds out the ASCII number of that character. Line 210 then creates a new C\$ string deleting that character. Line 220 determines the suit SU of the card and Line 230 determines the number NU of the card depending on the ASCII number. For purposes of illustration in this example, we put the number in CARD(N,1) and the suit in CARD(N,2) and print out the card number, then suit, in Line 260. In your own program you would "draw" the card or save CARD(N,1) and CARD(N,2) for later use.

Notice that the next time you "deal" a card, Line 190 chooses a random number CD which can be 1 to the length of C\$ (which decreases by 1 each time you deal). Line 200 determines which card it is, and Line 210 "squeezes" C\$ to eliminate that card (character) from being chosen again.

You can use this method of selection for random numbers other than for cards. The cards have extra calculations because of the four suits available. This method would be useful for any selection in which once an object is chosen it cannot be used again.

Just one more note this month. You may have noticed an error in the program listing for Playing Notes in the September 1991 issue. The listing is correct to Line 1360, then Jerry Stern's program and mine get mixed up. Line 1370 is at the bottom of page 13, and then Lines 1380 to 1440 are on page 14. The line right after my Line 1360 is a continuation of his program Line 810 on page 13. I might mention that I believe this is only the second time in 10 years one of my published programs has had a printing error. Really, it's all there, you've just got to find it! Best wishes for another month.

Research saves lives.

Pretty printings of program listings

By **JERRY STERN**
©1991 J.L. Stern

Each of us has our own unique style of programming. And each of us can understand a program more easily if the program listing is customized to our own special view of the programming structure. Variable names could be printed in wide print, for example. Or text inside quotation marks could be italicized, and function names and commands printed in bold double-strike characters. Of course, multiple-statement lines would be broken at each double colon, and most text would be printed in compressed print. Or, perhaps you like another combination of print effects. Fine. Whatever works for you.

This custom listing would be nearly impossible if the listing had to be created from a text listing of the program created with a statement like, LIST "DSK2.TEXTLIST". That is how programs that I've written in the past manipulated program listings. The text file was analyzed, broken long lines were reassembled, and multiple statement lines were separated. This month's program, FANCYLIST, works instead from a merge format disk file of a program, and provides a customizable program listing, matching your printout to your taste and to the abilities of your printer.

For Extended BASIC to process a disk file of a program character by character sounds slow, but FANCYLIST does manage to stay ahead of my TI Impact Printer, and after the first few lines of a listing, the program fills the printer's 2K buffer. On a faster printer, there may be some lag time between lines. Older printers print each font in a separate pass across the page, so a selection of type styles that is varied and complex for the different elements of the program may print more slowly than a simple selection. The newest printers print all fonts in the same pass, and font choices will have no effect on printing time.

Before examining FANCYLIST, let's briefly review merge format. A program listed in merge format consists of just a se-

quence of numbers between zero and 255. Each number is a token representing a command, like PRINT or DATA, or a symbol that identifies the numbers that follow as line numbers, or text, or numbers. For the full details of how token/merge format works, see my column in this past April's MICROpendium. FANCYLIST works by identifying each token in a program file, looking up what that number

available on many older printers, so you may want to substitute another type style, and COMON\$ and COMPOFF\$ are for the codes controlling compressed type. For printers with more fonts available, add similar variables as needed, perhaps ROMANON\$ and ROMANOFF\$. All extra font variables must be placed BEFORE line 220 to have an effect on all the formulas below.

Sample printout

```

190 WIDEON$= CHR$( 14 ) ::
    WIDEOFF$= CHR$( 20 )
200 ITALON$= CHR$( 27 ) & CHR$( 52 ) ::
    ITALOFF$= CHR$( 27 ) & CHR$( 53 )
210 COMON$= CHR$( 15 ) ::
    COMPOFF$= CHR$( 18 )
220 BOSUB 780 ::
    DISPLAY AT( 24 , 1 ) :
230 CALL KEY ( 3 , K , S ) ::
    DISPLAY AT( 12 , 1 ) REEP : "Name of printer?" : PR$ ::
    ACCEPT AT( 13 , 1 ) SIZE ( - 24 ) : PR$
240 DISPLAY AT( 15 , 1 ) : "Program to list?"      (Must be in merge format.)" : "DSK2." ::
    ACCEPT AT( 17 , 4 ) SIZE ( - 25 ) : F$
250 IF F$= "" THEN 230 ELSE F$= "DSK" & F$
260 OPEN #1 : F$ , DISPLAY , VARIABLE 163 , INPUT

```

represents, and printing that command or text, along with the printer codes needed to print in italics, or double-strike, or compressed print.

Before running FANCYLIST, adapt the program to suit your printer. Begin by changing the default printer name in line 90. On line 280, change the codes 27, 78, 6 to match your printer's command to set perforation skip to one inch. In lines 180 to 210, correct the variables for each printer command to the codes used by your printer. BOLDON\$ and BOLDOFF\$ should contain the codes to turn bold printing on, and off, respectively. Because you will need to combine printing styles with each other, such as bold wide print, it is probably best to use double-strike for bold rather than emphasized print, which is usually not available in compressed, or 132 character per line, print. WIDEON\$ and WIDEOFF\$ hold the codes for wide printing, which could be compressed wide, at about 60 characters per line, or true wide characters of 40 characters per line. ITALON\$ and ITALOFF\$ contain codes for italics printing, which will not be

Next, save a program for listing in merge format. For example: SAVE DSK2.MYPROGRAM, MERGE, and then run FANCYLIST.

Once you've seen what FANCYLIST can do, you can change the print styles to suit yourself. Within each of the program sections below, insert or substitute the variable names for each print style, in pairs of ON and OFF, to print each type of program element in the styles of your choice.

When FANCYLIST runs, the program will identify and decode each type of token. The first two bytes of each merge file program line identify the line number, and that number will be converted to a real number for printing. The other tokens will fill the balance of each line, including ASCII characters, which are used without a token to store variable names. When FANCYLIST finds the other tokens, it converts them into their English equivalents, so that the program simply swaps a word for each token it finds.

In lines 410 to 450, FANCYLIST pro-
(See Page 12)

EXTENDED BASIC—

(Continued from Page 11)

cesses variable names, which are stored as simple ASCII text, with no identifying token. To change the print style for variable names, place the ON code on line 420, and the OFF code in 450, replacing WIDEON\$ and WIDEOFF\$.

Text strings in quotes are processed beginning on line 470, and the printing style for these quotes can be changed by replacing ITALON\$ and ITALOFF\$ in lines 480 and 510. Quotation marks inside a quoted string are entered in a program line by typing a double quote, but stored in the program as a single quote, and the search and replace procedure in line 500, using the SWAP subprogram, converts those single quotes back to doubles for printing.

Next, lines 540 to 590 convert unquoted strings back to their original form. Text without quotes include numbers, comment lines, and unquoted text in DATA statements. You may change their printing style by replacing BOLDON\$ and BOLDOFF\$ in lines 550 and 580.

Line numbers within lines, such as GOTO 200, are converted next, and may be placed in a different style by changing line 630. For example, to print line numbers in bold, try this:

```
630 PRINT #9:BOLDON$; NC*256+NC2; BOLDOFF$; " ";
```

Next, reserved words, such as commands like DISPLAY AT, are treated starting at line 660. Since all of these are different, the variable array T\$(255) is used to hold all the command names. By editing the names starting on line 790, you could customize each command differently. For example, all the commands could be translated into another language. Or "PRINT" could become "Print" or "LinePrint." As listed, I've used spaces after those commands that do not normally occur immediately before parenthesis, so CHR\$ will not have a trailing space, but PRINT will. Again, change the individual tokens as you like. You could even choose to print PI (token #221) as "3.14159".

Finally, multiple-statement lines are broken up starting at line 700, and a TAB(8) moves the following commands and formulas out to match up with the beginning of the line listed immediately above. That is the last of the token choices

that FANCYLIST uses to create its printout. But there are still more ways to customize FANCYLIST to your needs.

VARIATION 1: While debugging a program that prints a complex series of text or charts, try using a printout that emphasizes the PRINT statements.

```
1050 T$(156)=BOLDON$ & WIDEON$ & "PRINT " & WIDEOFF$ & BOLDOFF$
```

VARIATION 2: Having trouble debugging a program that crashes with an error message from file input/output? Try adding the BOLDON\$ and WIDEON\$ and matching OFF variables to tokens 146-INPUT, 156-PRINT, 159-OPEN, 160-CLOSE, 170-LINPUT, 222-REC, and 253-#.

VARIATION 3: When a program has an OUT OF DATA error from trying to READ past the end of the DATA statements, try adding the wide and bold treatment to tokens 147-DATA, 148-RESTORE, and 151-READ.

VARIATION 4: Trace formulas that provide incorrect answers by adding the same print variables to all the math and string functions. Emphasize tokens 182 to 197, 203 to 221, and 223 to 225.

There are more variations, but the best one is the custom printout that you design especially for your own needs and your own unique programming style.

BASIC Assembly

At the head of the file

By BARRY A. TRAVER

©1991 B.A. Traver

As we continue our series on direct disk access from TI Extended BASIC using the built-in DSRLNK utilities, we move on from an exploration of sectors 0 and 1 on a disk to taking a look at 'File Descriptor Records' (FDRs) or, as they are more commonly known, file headers.

In the future we will be looking at other DSRLNK disk utilities (so that we can do such things as rename a file or protect/unprotect a file from XB), but for now, let us follow on in the direction set in the previous article: using direct single-sector access to see how a disk is organized.

DISKTUTOR, which appeared in September's column, and this month's program (FDR/TUTOR) both use the versatile 'RAW' (single sector Read and Write) code to help us see how a disk is laid out. Next month we will finish up our focus on 'RAW' as we see some brief practical applications of 'RAW', although — as Jerry Coffey, John Johnson, Richard Mitchell, and others have discovered — these simple 'RAW' routines have lots of practical applications, more than we can even suggest in this column.

Since this month's program is fairly lengthy, I'll keep my comments in this article fairly short. To use FDR/TUTOR, you first need (as last month) to load in the

'RAW' routines. This you can do, as you know, in many ways: (1) you can do a CALL INIT and CALL LOAD('DSK1.RAW/O') to load in a 'RAW' object code file, (2) you can use Todd Kaplan's ALSAVE utility to embed the assembly routines within FDR/TUTOR before running it, or (3) you can run my XXB before running the program, just to name a few methods.

From DISKTUTOR and FDR/TUTOR, you should have a good understanding of how your computer keeps track of the files stored on a disk. With this knowledge, you'll be better able, for example, to do simple repairs. Last month we showed how you can do a number of simple 'RAW' repairs, but we did not show you how to repair sector 1 if the sector is physically damaged. You learned what to do in the case of a file missing or duplicated in the list you get when you do a disk catalog, but we didn't go beyond that.

Well, if all goes well, next month we'll have for you a program that will rebuild sector 1 for you AUTOMATICALLY! If you want, you can help it along by confirming each filename that should be added to the catalog, but you can also see whether the program can handle the task entirely on its own. Another brief program I'll have for you is one that will fix up byte 12 of the file header if it's messed up on a file

someone gives you. (The MYARC hard drive controller sometimes sets a reserved bit in byte 12 of the file header; if the bit is not reset, you cannot catalog the disk from XB without your catalog program crashing on you!)

Incidentally, my pioneer ARCHIVER program was simply an Extended BASIC program with only two assembly routines added. You guessed it: 'RAW' was the key. ARCHIVER also depended upon the kind of information accessible to you in DISKTUTOR and FDR/TUTOR, so I hope you will find the kind of information contained in these tutorial programs as helpful to you as it has been to me and others.

Well, enough talking for this month. I'll let you get on with your typing (or, if you get MICROpendium on disk in addition to the hardcopy issue, to actually running FDR/TUTOR and trying it out). Until next Time, keep on computin'!

Barry Traver published a diskazine for TI users called Genial TRAVeLER.

THE ART OF ASSEMBLY — PART 6

The Ins and Outs

By BRUCE HARRISON

©1991, Harrison Software

As we promised, this part of our series will deal primarily with getting into and out of your Assembly program gracefully. We consider this an important topic, since it can make all the difference when you're writing entire programs in Assembly language. In one book that we used while trying to learn Assembly, a small program example was shown, but there was no way out of the program once it started except the On-Off switch. That shouldn't be.

TI's E/A book gives several ways of returning from programs, but we don't use any of them. Instead, there are two methods that we've used, each of which gets you back where you came into the program from. If you entered from E/A option 3, we'll return you to that screen that says "PRESS ENTER TO CONTINUE" at the bottom. If you entered from XB, we'll send you back to XB with the * READY * and prompt on the screen.

The means of entering a program may vary all over the place, from the very simple LWPI WS to a section of code that re-arranges the locations of tables in the VDP ram, and to even more exotic openings. All the openings have that one thing in common, setting the workspace registers to a workspace of our choosing. As we explained earlier our usual choice is to set the workspace at >20BA, which TI set aside for us to use. This can be used even when programs start from XB, so long as the program only returns to XB upon exit. Utility subroutines for use in XB programs via CALL LINK should always have a self contained workspace. We have found, for example, that the NUMASG utility will corrupt the workspace at >20BA. After returning to XB from an Assembly routine that uses NUMASG and the >20BA workspace, the XB program will break with an error.

In today's Source Code (see sidebar) there are two separate programs, with different entry and exit methods used. Program one is of course not complete, since it needs the subroutine CRSIN and its supporting smaller subroutines given in our last article. You can combine that code with this "shell" and assemble it. When you do that combination, you'll have to delete the line of REFs and the equate for STA

(See Page 19)

BASIC/ASSEMBLY—

(Continued from Page 18)

TUS, from the subroutine's code, and the line at label TEMSTR from the subroutine's Data Section. The resulting program will serve to demonstrate the subroutine. It will also illustrate the simplest possible entry and exit for your own programs. The entry simply sets the workspace pointer, then goes about its business. The exit uses a trick passed along to us by Harry Wilhelm. We set the workspace pointer back to GPLWS, clear the status byte, then B @>006A.

That exit method will work whether you entered from E/A or Extended Basic. It may not be necessary to clear the STATUS, but the only way to find out in any particular program is to run it and see whether an error is reported when you exit. If no error is reported, then you can omit CLR @STATUS from this exit.

Our normal practice is to leave that line in, just to be on the safe side. We don't like seeing error reports on the screen, and we're too lazy to go look up their meanings in the appropriate book.

The second program uses a slightly more exotic way of entering and leaving. At the opening, it stashes away the value from R11 of whatever workspace the computer was using, then restores that to R11 of the GPL workspace before doing an RT. Early in our experiences with the TI Assembly language, we discovered that when you enter your program, the computer has essentially performed a BL operation to get into your program, so register 11 contains the return address you can use to exit. There are exceptions to this when you entered from Extended Basic, and this method from Program 2 will not always work for XB entry. The first method (B @>006A) will always work, provided only that you first load the workspace pointer with the GPL workspace (>83E0).

That brings us to a very minor point, but one that might be important in some of your programming efforts. In our music programs, we discovered that, for some reason we've not discovered, if one does NOT move R11 to someplace on entry, as in Program 2, the sending of bytes directly to the sound generator at >8400 will not work properly. We have no idea why that's so, or whether other functions might be affected, but in our music programs we use the entry method of Program 2 and the exit method of Program 1. That keeps everything working.

Both Programs are set up to be entered from

(See Page 24)

TEX+COMP
Celebrating Our Tenth Year

FREEWARE THE TOP IN QUALITY,
SELECTION AND VALUE

•• Public Domain and Shareware for the
Texas Instruments TI-99/4A Computer.

**INCREDIBLE
SOFTWARE**

GAMES • BUSINESS • GRAPHICS • WORD PROCESSING • UTILITIES • DATABASE • MUSIC • COMMUNICATIONS • HOME

ONLY **\$4.95** Per Disk

BONUS

FREE DELUXE DISK STORAGE
CASE WITH EACH ORDER OF
FOUR OR MORE DISKS!!!

The TEX-COMP Freeware program is a disk distribution service which is operated to support the TI-99/4A user and programmer and to keep the TI-99/4A the best value in the computer world. The nominal charge (4.95) that is charged for each title is for distribution services only and includes the cost of duplication, premium grade disks, labels, advertising and packaging including plastic disk cases that we include at no extra cost with orders of four or more disks. When a program requires more than one disk side, we supply a floppy or even a second disk at no extra cost. The programs we distribute come from all over the world and are either public domain or the author has expressly agreed to freeware distribution or has placed the program into freeware distribution by providing it to a commercial bulletin board service.

**#1. THE SINGING TI-99/4A
SPEECH & MUSIC DISK**

This is the disk everyone is talking about. The computer voice actually sings to animated graphics. Includes routines by master programmer Ken Gilliland. Bert & Earnie, Maitilda & much much more. 2 disk sides, speech & 32 K req. Exbasic autoloader.

**#2. WHEEL OF FORTUNE, BLACKJACK &
JOKER POKER**

Three fantastic freeware programs on one disk. Professional quality and the best "wheel" game around at any price. Wanna would love it!

#3. DUMPIT

This disk helps you transfer many TI modules to disk. Recommended for users with some programming ability. Ed/Assembler and "widget" recommended.

#4. PRINTART

Two disk sides filled with files that print out great quality pictures on most printers. Many famous TV and comic characters on this disk. "Beam me up Scotty."

**#5 ORIGINAL TI SALES DEMO DISK
WITH TI-TREK GAME**

This disk is packed full of assorted files of all types. Graphics, speech etc. Contains complete TI-TREK game for Speech Editor or TE-II module.

#5A. TI MUSIC/GRAPHICS

A great collection of music and matching graphics. Great examples of music & sprite programming.

#6. EXBASIC MUSIC

A two disk side collection of music & graphics that we consider some of the best.

#7. SPACE SHUTTLE MUSIC/GRAPHICS

One of the real outstanding examples of programming. This disk has it all. Great graphics, music, and continuity. A real salute to the space program. It is almost like watching a movie!

#8. LOTTO PICKER

This program randomly generates numbers for use in the various state lotto games and even runs a simulated lotto game. Easy to modify for pick 6 etc. games. A great learning and fun disk.

#9. MONA LISA PRINT OUT

This disk prints out a near photo quality picture of that lady with the classic smile. We understand it was made by digitizing the original with a super powerful computer and converting the output to run on the TI-99/4A. Impresses everyone who sees it! Requires Epson printer compatibility.

#10. GOTHIC PRINT

This disk lets you type out a phrase on the screen and then print it out in gothic (Old English) style. Looks like hand-lettered calligraphy. Use for invitations, announcements and business cards.

**#11. ANIMATED CHRISTMAS CARD
"WOODSTOCK"**

This disk was actually originally sent to TEX-COMP as a greeting from master programmer Ray Kazmer. It was just too good not to share! One of the best examples of computer animation and graphics you will see on any computer!

#12. TI-99 OLOPY

This great piece of programming actually simulates and plays the famous board game. For legal reasons we cannot name the game but "do not pass Go! but go directly to Jail!"

#13. STRIP POKER (PG RATED)

Play Poker against your TI-99/4A. When you win a hand she loses--a piece of her clothes that is. Don't worry about being a lousy poker player. Another file is included where you don't even have to know an ace from a king.

#14. FIGURE STUDY (PG RATED)

A collection of Playboy type centerfolds that can be printed out at your command. Use with any printer.

#15. STAR/EPSON PRINTER DEMO

This 2 sided disk contains a large collection of demo programs to put your Star/Epson compatible printer through its paces. Learn what control codes can do! Lots of text and graphics examples. Second side has a great tutorial on printer graphics with examples!

#16. SIDEWAYS PRINTOUT

This program allows you to print out the material from your printer sideways. Great for spreadsheets, banners and large graphics. Second side contains some new enhancements for Multiplan not available on the TI upgrade.

#17. TI FORTH DEMO

This demo disk was released by TI to show the power of Forth. Fantastic music and graphics. Ed/Assem and 32K required!

#18. TI DIAGNOSTIC

This program loads into the Mini-Memory module and checks out your entire system. Much better than disk based diagnostics that cannot be used if a problem in the disk system is at fault. Complete documentation on second side.

#19. TI WRITER/MULTIPLAN UPGRADE

This disk released by TI adds real lower case to your TI Writer, speed to Multiplan and other enhancements. Easy to use... just substitute new files for old! Instructions included.

#20. ACCOUNTS RECEIVABLE

This self contained prize winning program loads and runs in Exbasic and has all the features found in a professional accounting system. Complete with documentation and a second disk side with report generating programs.

#21. DATA BASE DEMO DISK

A professional data base program that was originally written to store various magazine articles from computer magazines and then find them by name, subject, key word, or publication. Fast, easy to use and easy to adapt for other applications. Come complete with sample data to make learning data base processing easy. Completely menu driven and unprotected.

TEX+COMP

Celebrating Our Tenth Year

FREEWARE

•• Public Domain and Shareware for the Texas Instruments TI-99/4A Computer.

ONLY **\$4.95** Per Disk

Public Domain and Shareware Programs to Meet Your Every Computing Need.

BONUS

FREE DELUXE DISK STORAGE CASE WITH EACH ORDER OF FOUR OR MORE DISKS!!!

#22. ASTROLOGY

This one is as good as anything you will see in an arcade. Great color graphics and displays of the Zodiac. Enter your birthdate and learn about your sign, your lucky days and famous events in history on your birthday. Even prints out a report. Can be used as a great moneymaker at a charity event. Help guide your spouse's career.

#23. WILL WRITER

Enter your answers to a group of computer asked questions and this program then writes you a last will and testament. Now you can leave your TI-99/4A to your favorite nephew. Works with any printer. Appears legal in all states but better check that out!

#24. ENGINEERING CALCULATIONS

A two sided computer handbook of dozens of the most often used engineering and technical formulas. A real time saver. Does conversions, calculations and even designs electrical circuits. A must for anyone whose profession or hobby involves scientific calculations. Even has medical and communications applications.

#25. MEDICAL ALERT

This disk contains many menu accessible files covering most everyday medical emergencies. A good "what to do until the doctor or paramedic comes" guide. Well written and organized. Could very easily save a life!

#26. R RATED GAME

It was bound to happen. A talented (but demented) programmer in Germany wrote an Invaders type game but with most unusual guns and targets. Definitely not what you would find at your neighborhood arcade. Not only a great party game but some great programming. You must be over 13 to order this one!!

#27. KIDS LEARNING

An educator in Georgia put this two sided disk collection of educational programs together. Contains great material. Math, geography, reading improvement, and even IQ testing. All high quality programs for kids of all ages.

#28. LOADERS AND CATALOGERS

We put together a collection of the best programs that catalog and load a group of programs on a disk. Just try them, pick the one you like and transfer it to another disk with the file name LOAD and you are in business.

#29. LABEL MAKER I

Two great programs for making custom labels for disks, addresses, video tapes or any other application. Even contains a graphic display of the TI-99/4A console. Now you can create custom labels of any number by just typing in the lines as you want them. Uses standard tractor labels.

#30. HOUSEHOLD BUDGET PRINTOUT

With this disk you print out the data you have stored with the TI HBM Module. HBM is a great module that can be used for many home and small business applications but TI forgot to include a printout function. This program comes with full instructions and we are sure that your HBM Module will now start being used. Fantastic programming job.

#31. MORSE CODE TRAINER DISK

This disk has everything you need to learn and practice Morse Code for the various FCC license exams. It also is great for scout groups and school "ham" clubs for group training and merit badge qualification. Professional quality.

#32. EXBASIC XMAS MUSIC

Two disk sides full of high quality xmas music that can be played throughout the holiday season and then used as a learning tool since it contains wonderful arrangements and graphics. Autoloading and menu driven.

#33. CHECKERS & BACKGAMMON

A collection of great checkers and backgammon games for the TI-99/4A. These are professional in quality and will keep you busy for hours.

#34. SOLITAIRE & SCRABBLE

Another collection of classic games for the TI-99/4A. Exbasic & 32K req.

#35. PROGRAMMING AIDS & UTILITIES I

A collection of some unusual programs of interest to programmers. One program shows a group of opening title displays, another is a cross reference program as good as any of the commercial ones, plus a great disk management utility.

#36. STRICTLY BUSINESS

A collection of various programs for evaluating loans, calculating interest, and other financial items such as return on investment and security performance. Two disk sides filled with financial and business related programs.

#37. LAPD COOKBOOK

This unofficial police cookbook was put together by one of our boys in blue who is also a gourmet chef. (Yes, it contains jailhouse chili) Over 50 great recipes from soup to nuts on two disk sides and each separate side can be called up on screen or printer in exbasic from a menu. As good as any of the new PC computer cookbooks we have seen.

#38. GREAT 99/4A GAMES VOL. I

A collection of professional games in assembly and exbasic that all load from a menu in exbasic. Includes a great ski game where you dodge the trees in a fast downhill run. We have included only the best.

#39. GREAT 99/4A GAMES VOL. II

Still more of the great ones from all over the world. The quality, graphics and speed of many of these games will make you wonder why they were never released commercially.

#40. ARTIFICIAL INTELLIGENCE

This disk contains the famous computer program "Eliza" where you type in a question or a problem you are having and "Eliza" helps you find the solution. Also contains one of the better bio-rhythm programs so you can analyze all your emotional problems at one sitting.

#41. VIDEO GRAPHS MODULE BACKUP DISK

This disk is a backup of the discontinued Video Graphs Module from TI. For legal reasons, it can only be purchased for backup use by owners of the original module. Do not order UNLESS you have the original module and intend to use this disk only for backup purposes. Exbasic autoloading.

#42. FUNNELWEB FARM UTILITY

You heard about this one, now direct from Australia is the latest version of this fantastic utility that puts everything at your command. From one program you can access word processing, editor assembler, telecommunications and just about everything else. A freeware program complete with documentation on a second disk side.

#43. BEST OF BRITAIN, VOL I

Now for the first time, a collection of the best 99/4A games Britain has to offer including the famous "Billy Ball" series of arcade games. Great graphics, action and excitement.

#44. LABEL MAKER I GRAPHICS

A disk filled with graphics for the Label Maker I disk (#29). Dozens of great graphics for custom labels!

#45. BEST OF BRITAIN, VOL II

This disk contains an outstanding 3-D graphics adventure game for the TI-99/4A. Carfax Abbey lets you actually move through a four story mansion complete with bats and vampires. You actually are placed in each room and go up and down stairs and through secret panels. Legend of Zelda... look out!

#46. SUPER TRIVIA 99

A great trivia game for 1 to 4 players with great questions and capability to add your own and print out the files. This one is a real challenge.

#47. INFOCOM RAPID LOADER

If you have Infocom games this is for you. Loads all TI Infocom games in only 28 seconds and permits new screen colors and improved text display. Comes with all documentation on disk.

Send order and make checks payable to **TEX+COMP**
P.O. BOX 33084 — GRANADA HILLS, CA 91344

TERMS: All orders in U.S. dollars. For orders to be shipped use cash or check. No money orders. Add applicable postage and \$2.00 shipping. Excludes Mississippi and Alaska. No credit card orders. Prices and availability subject to change without notice. We reserve the right to limit quantities.

TEXAS INSTRUMENTS

24 Hour Order Line

(818) 366-6631

NOTE: Payment must be accompanied by order. Credit Card Company must be notified. Order to immediate shipment. Personal Checks require 2 to 3 weeks to clear. Shipping costs add \$1.00 per disk.

TEX+COMP Celebrating Our Tenth Year FREWARE™

•• Public Domain and Shareware for the
Texas Instruments TI-99/4A Computer.

BONUS

FREE DELUXE DISK STORAGE CASE WITH EACH ORDER OF FOUR OR MORE DISKS!!!

#48. GHOSTMAN (from England)
This Pacman/Munchman type game starts at a slow pace and slowly speeds up to a break-neck pace. A totally new experience.

#49. DEMON DESTROYER (from France)
This great assembly game starts where Invaders leaves off. Add features like descending aliens and closing walls. Hours of great arcade action.

#50. OH MUMMY (from Germany)
Move through the chambers of a Pyramid in search of hidden treasure. Fantastic graphics and great entertainment.

#51. BERLIN WALL (from Canada)
This game requires a mine field to be crossed before escaping from E. Berlin. Good graphics and a real challenge.

#52. ANIMATION 99 (from Germany)
THIS IS THE ONE!!! A demo disk filled with computer animation routines like you have never seen before on any computer. See famous cartoon figures move with more realism than on Sat. morning TV. This disk received a standing ovation when previewed at a local users group. We have even included instructions how to do it yourself on the second disk side. This one is a show stopper!!!

#53. HACKER/CRACKER
A collection of disk copying programs that copy TI disks by tracks. If one of these can't copy a protected disk nothing will. We included a collection of the very best ones including both TI and CorComp compatible. These programs require 2 disk drives and 32K of memory.

#54. ASTRONOMY
This program from Australia plots the heavens and teaches you about the solar system. A great learning and reference tool. Exbasic and 32K required. Don't confuse this one with our Astrology demo. They are not the same...ask Nancy!

#55. SCREEN DUMP
This program allows you to dump disk and even module programs to a Star/Epson compatible printer. Comes with easy to follow plans to build a load interrupt switch which is needed to dump module programs. This dump program by Danny Michael is considered the best of the bunch! Complete with documentation.

#56. SPREAD SHEET
OK, it's not Multiplan but it works great and handles many spread sheet applications. A great way to learn to use spread sheet software. Comes with full instructions and documentation.

#57. TELCO
Considered one of the best data communications programs for the TI-99/4A. Complete with documentation.

#58. PR BASE
The alltime most popular and widely used data base program for the TI-99/4A. A freeware program that is widely supported and updated.

#59. GRAPH MAKER
A collection of the best programs for producing graphs and charts from your data. Exbasic and printer.

#60. FREDDY
A fantastic game where you guide the hero through underground passages filled with danger. Nintendo quality, great graphics and fast action. One of the best we have ever seen!!!

#61. THE MINE
A fast action game from F.R.G. that will keep you going for hours. Many screens and skills required.

#62. DISK MANAGER II MODULE BACKUP
The complete TI Disk Manager II on Disk. For legal reasons it is only available to owners of the original module for backup use.

#63. ASTROBLITZ/MAZOG
A pair of great games that continue where Parsec and Munchman leave off. Imagine Parsec with enemy space craft coming from in front and in back of your ship!!!

#64. MAJOR TOM/SPACE STATION PHETA
A pair of great space games. These two are going to keep you in front of the 99/4A for hours. Great!

#65. PERFECT PUSH
An all new space game where you assemble and launch a rocket ship in outer space while avoiding a space monster. This one is professional in every way...graphics, speed and action!!!

#66. HEBREW TYPEWRITER
This program converts your TI-99/4A keyboard into a typewriter that displays Hebrew letters on the screen. Can also be printed when used in conjunction with screen dump program (included). Great for religious training or making your copy of the dead sea scrolls or ten commandments!

#67. GENEALOGY
Now you can set up your family tree and store or print out the records. Great for keeping track of family relationships and records.

#68. CHESS
The original computer chess game Sargon has been reprogrammed for the TI-99/4A. Now play chess with your computer. Documentation included. Exbasic autoloader.

#69. COMPUTER PLAYER PIANO/KEYBOARD CHORD ANALYSIS
A unique music program which displays a piano on the screen and actually plays your selections.

#70. TI RUNNER II
The very latest (and best) "runner" game based on TI Runner and Star Runner. Great action, graphics and entertainment.

#71. KIDS LEARNING II
Two more disk sides loaded with the best in educational programs. Kids improve their math, spelling and comprehension skills while having fun.

#72. CERBERUS
Fantastic space game from Germany. Pilot your ship through narrow and crooked channels in space without colliding. Great graphics and music.

#73. CRYPTO (gram)
One of the best word games we have seen for any computer. Set up like a TV game show with great screen displays.

#74. LABEL MAKER II
Make labels for holidays and special events. You compose the text and select the resident graphics for the occasion.

#75. DISK CATALOGER
Now you can organize your disk files with this great utility. Files, sorts, and prints your records. Easy to use.

#76. PROGRAMMING AIDS AND UTILITIES II
A collection of very useful material. Includes a program to convert basic to exbasic so your old basic programs will load & run in exbasic, even with graphics. Also includes two on screen diagnostic programs to test your keyboard and processor. A great merge utility is also on this disk.

#77. MICRódex 99
A database program by Bill Gaskill which files and retrieves data such as magazine articles. A sample database is included.

#78. ARTCON+ BY RAY KAZMER ATTENTION GRAPHX AND TI ARTIST USERS!!!
This program lets you convert Exbasic graphics to TI Artist and Graphx pictures. Also contains a new MAC-RLÉ (2) for converting from Artist to Graphx.

#79. DMI000 V3.5
One of the most popular disk managers for the TI-99/4A. Originally a rip-off of the CorComp manager, it has been improved and refined by talented users all over the world. This version is deemed the most reliable to date and is far advanced over the TI Disk Manager II. Distributed by permission from CorComp.

#80. BIRDWELL DISK UTILITY
A must if you are into programming and software development. Besides being a great disk manager, it has provision for copying sectors, comparing files and is menu driven. Complete with documentation.

#81. HOME ACCOUNTING SYSTEM
A complete family & small business accounting system including a checkbook manager, budget analysis, mailing list and an inventory program. Complete with documentation. Easy to modify for specific needs.

#82. CROSSWORD PUZZLES
This program from Australia creates a different puzzle each time you run it. Self contained with definitions and vocabulary taken from a leading crossword dictionary. Great crossword fun.

#83. HOME APPLICATION PROGRAMS
A two disk side collection of useful programs for the home. Includes banking, cooking, home bar guide, utility records, and much much more. Something for everyone.

Send order and make checks payable to

FREEWARE

•• Public Domain and Shareware for the Texas Instruments TI-99/4A Computer.

Public Domain and Shareware Programs to Meet Your Every Computing Need.

ONLY **\$4.95** Per Disk

BONUS

FREE DELUXE DISK STORAGE CASE WITH EACH ORDER OF FOUR OR MORE DISKS!!!

#84. GALACTIC BATTLE/SPY ADVENTURE

A pair of great commercial quality games from EB Software of TI Runner fame. Galactic Battle is a space "trek" type strategy game for one or more players. Spy Adventure is an adventure game that will keep you guessing for hours.

#85. AUTOBOOT UTILITY

This utility which can be installed on a disk loads and runs or displays most files. Now you can have a disk with exbasic programs, Editor Assembler programs and TI Writer files and run or display them all from exbasic.

#86. COLUMN TEXT III V3.2

A very useful utility for printing TI Writer and 99 Writer II files in separate spaced columns. Saves hours in producing a newsletter. Complete with documentation.

#87. ARCHIVER III

This utility allows you to "pack" or combine several files into one for space utilization. A number of boards are sending files packed to save transmission costs. This utility will let you pack and/or unpack these files.

#88. AUSSIE GAMES VOL 1

A collection of games from our friends down under. Includes a great card game and board game. Hours of fun and entertainment. Includes Matchmaker & TILO.

#89. PROCALC

This is an on screen calculator for decimal/hexadecimal conversions and much more. A must for the serious programmer.

#90. JET CHECKBOOK MANAGER

This checkbook manager is considered the ultimate with every feature you can think of for keeping track of your checking account and keeping records of your spending for budget and tax purposes. Complete with documentation.

#91. "THE MAZE OF GROG" (St. Valentine)

Rav Kazmer has created a great maze game with fantastic graphics and the characters from his now legendary "Woodstock" disk. Fun for all!!!

#92. HOUSEHOLD INVENTORY

Written by 99/4 programming great Charles Ehninger, this prize winner originally sold for \$59.95. Keeps track of household, business or personal items by category and provides automatic updating for inflation etc. A must for tax and insurance records!

#93. THE 1991 KBGB GIRLIE CALENDAR

This latest offering from programming master Ken Gilliland prints out a jumbo 12 month calendar with a knock-out centerfold pinup for each month. If you like our #14 Figure Study disk, you will flip over this one. For Adults Only!! Exbasic & d/m printer.

#94. GREAT 99/4A GAMES VOL. 111

If you have seen vols. 1 & 2 of this series you know we only provide the very best. This latest volume is also filled with a collection of great ones!

#95. WEATHER FORECASTER

The weather predictions are amazingly reliable and accurate! A great game "Lawnmower" and a mini database are also included to make this disk a fantastic value.

#96. STATISTICS & SORTING

Two great assembly utilities by John Clulow. STAT is a set of statistic routines for use in exbasic. SORT allows sorting by two separate fields and a choice of two types of sorts.

#97. MEMORY MANIPULATOR

This powerful utility lets you explore the entire memory in your 99/4A system and take apart what you find. User friendly!

#98. DAYS OF EDEN & DOORS OF EDEN

Two bible games (non-fiction) that work with the TI Adventure Module.

#99. GREAT 99/4A GAMES VOL. IV

This disk features the works of J. Peter Hoddie. All of these games are of commercial quality and well worth the donation requested!

#100. ASSULT THE CITY (T. OF DOOM)

An exciting game for use with the Tunnels of Doom module. Several Exbasic bonus games are included.

#101. ENCHANCED DISPLAY PACKAGE

This screen enhancement utility lets you do 40 columns, windowing, reverse scrolling, clock/alarm, and a whole host of other great tricks in exbasic. Fully documented.

#102. COLOSSAL CAVES ADVENTURE

This classic adventure now available for the 99/4A is what led to the Zork series. Hours of text adventuring.

#103. SORGAN, THE 99/4A ORGAN

This program which is currently selling for big bucks on module turns your 99/4A into an electronic organ. Sound effects, different instruments and voices, chord forms, color graphics with complete control of all.

#104. C99 COMPILER AND LIBRARY

This two-sided (flippy) disk gets you into C programming with your 99/4A. Comes with a great collection of utilities such as text & graphics. (E/A)

#105. KING'S CASTLE+

A great arcade style assembly game formerly offered on module. Also includes an EB "Trek" game and a collection of sprite & graphics from Tigercub's Jim Peterson.

#106. QUEST (Dungeons & Dragons)

One of the best D&D games around! You must destroy the Dark Lord to free your homeland! Complete with documentation on disk.

#107. STAR TREK MUSIC ALBUM

Ken Gilliland's music and graphics version of the TV theme and the three motion pictures. (Exbasic)

#108. FUNPLUS BY JACK SUCHRUE

Fantastic disk packed with Funnelweb (#42) templates, utilities and prog. to augment and configure Funnelweb. Unbelievable collection of fantastic aids to make the best even better!

#109. TI-WRITER MINI MANUAL

This disk prints out a five page TI Writer manual with everything you need to know to use TI Writer or the many clones such as 99Writer II. Additional aids for using this powerful word processor are included.

#110. DISK + AID

A powerful disk sector editor formerly sold for \$20. Menu Driven and easy to use.

#111. POP MUSIC & GRAPHICS

This exciting disk from Germany features music/graphics written in 100% assembly and what comes from the TI sound chip is sure to astound you.

#112. INVOICE PACK

An excellent invoice preparation and printing program with instructions on how to modify it for your own business.

#113. LABEL MAKER 3

A collection of label programs to create mailing and disk envelopes, disk labels and much more!

#114. PANORAMA

A drawing and illustration program that compliments Graphx and TI Artist. A must for the serious 99/4A artist!

#115. GRAPHICS DESIGN SYSTEM

A complete system for creating graphic screens in full color for your programs by J. Peter Hoddie. Fully documented.

#116. FOURTH TUTORIAL

A lesson in FORTH programming on how to create graphics.

#117. UNIVERSAL DISASSEMBLER

This powerful utility written in Forth allows disassembly of programs off disk in any format, in memory, and even off of P-Box cards. Very complete with some very unique features.

#118. FAST TERM

One of the most popular and recommended of the 99/4A terminal emulator programs. Supports TE-II, ASC11, and X-Modem transfers, print spooling and more. Loads from Exbasic or E/A.

#119. RAG LINKER

A utility for converting DIS/FIX 80 assembly object code files to PROGRAM image. This allows files to load faster and take up less space on disk. Full Doc

#120. BITMAC

The original BITMAC is now available at \$4.95 with all original documentation. A powerful graphics program for the 4A which lets you print where you want, even over pre-existing text. Create great graphics in 16 colors, print text sideways, mirror image, upside down etc. etc. A must for anyone into 99/4A graphics. Comes with second bonus disk with utilities such as sign & banner makers. Even can computer generate your own signature!

#121. SUPER YAHTZEE & WHEEL 11

If you like Yahtzee this disk is for you. A great version written in high speed assembly. Also included is another version of Wheel of Fortune which also lets you create your own puzzles with a puzzle edit program included.

#122. ADULT ADVENTURE

A truly adult adventure for use with the TI Adventure Module. Also included is a bonus adventure (not adult) "LOST GOLD" which is one of the better ones we have seen recently.

Send order and make checks payable to **TEX+COMP**

BASIC/ASSEMBLY—

(Continued from Page 19)

E/A Option 3. In the first one, we included the code to define the edge character to look like a space, then proceeded to set up for and call our subroutine. Note that there is no screen-clearing operation here. Since this program does not auto-start, but requires you to type in the program name `TART` at the PROGRAM NAME prompt, the screen will be cleared and set to light green for you.

After the subroutine has finished, the program takes the string just placed in `TEMSTR` and displays it a few lines down the screen. It then calls the subroutine again. This is done simply to give you a chance to see that the subroutine did what was intended. Pressing Enter will get you out of the program and back to the E/A prompt `PRESS ENTER TO CONTINUE`.

The second program is intended for you to use as a small utility. We wrote this originally for our own use, because many times when we were operating with the E/A module in place, we wanted to print a source code file, but wanted a way to set the printer to skip over the perforations while printing. Before we had a `RAMDISK`, we kept this program on a disk with `EDIT1` and the `ASSM1`, `ASSM2` files. Now, we keep it available all the time on a `RAMDISK`.

This program does nothing fancy. When it loads from Option 3, it auto-starts and runs the part starting at label `SKIPIT`. This

sets our printer to skip over some lines at the bottom of each sheet. That happens very quickly, so you may not even see the light blink on the RS-232 card. You'll also not see anything happen at the printer, since we've opened the file to the printer with the `.CR` option, so no line feed or carriage return will go to the printer unless we intend to send one.

The program will do its job and simply return to E/A, which will place you back at the FILE NAME prompt. If all you wanted to do was set up for skip-over, press Function-9 to get out to the main E/A menu. This small program, however, has another entry point called `DOUBLE`. If you also want double strike printing, press Enter at the FILE NAME prompt, then type in `DOUBLE` Enter at the PROGRAM NAME prompt. This will send another three characters to your printer, putting it in double strike and sending a harmless carriage return. That carriage return is sent only so that each thing sent to the printer by this program will contain three characters. If the carriage return were not there, the 10 from the previous three character string would still be present in the VDP Ram buffer, would be sent to the printer, and would cause an unwanted line feed to occur.

The escape sequences we've put into this program will work for all models of Epson, Star Micronics, and Panasonic printers. The number of lines to skip (third byte at label `PRNBYT`) is ten for us, because of the way we usually have our printer's paper loaded. You may want to change that number to something less, say 5 or 6, before assembling the program. If your printer is some other make, such as an Okidata, you may need to change the escape sequences in other ways. I've run into one printer, called the Olivetti ink jet, in which sending a line feed or a carriage return, or both in either order, will always result in both a carriage return and line feed being performed. Most printers have a DIP switch setting to prevent added line feeds, but not the Olivetti.

This program incidentally introduces the new (for these articles) topic of file management. It Opens, Writes to, then Closes a file. As we've noted in the source code's annotation, there are some shortcuts we've taken here which would not generally be used in file operations. This program does, however, work nicely for its intended purpose. In a later article, we'll get deeper into file accesses, and avoid the shortcuts that were used in this program.

We promised some discussion on the ramifications of using Assembly programs that run from Extended Basic. One could nearly write a book on this topic alone. One of the big problems is this business of the character offset (>60) that one must use when operating from XB.

Strangely enough, it is possible to avoid that offset in XB. In our Word Processor, which was originally designed to run only under E/A Option 3, we avoided needing the offset by switching to the text mode and loading our character definitions starting at >800, where they are located normally when using the E/A module. To do that, we had to perform some `VWTR` operations, so that VDP would know where its tables were located. This operation is performed not by the Word Processor itself, but by the loader program's Assembly portion, embedded in the Extended

BASIC/ASSEMBLY—

(Continued from Page 24)

Basic LOAD program.

Let's digress into that subject just a bit. The actual Word Processing program is stored on the disk as a series of memory-image files. There are two loaders included in the program disk, one named LOAD, which runs from Extended Basic, and one called UTIL1, which is an Option 5 E/A program file.

Both these loaders contain code to put the VDP into the required setup for the TEXT mode, place a PLEASE STAND BY message on the screen, then load in the five memory image files that comprise the actual Word Processor.

In the Assembly part of the XB LOAD program, we set up to avoid the need for offset by performing the following:

```

LI    R4,32*8+ >800  Location of space character
MOV  R4,@>834A      Move that value to FAC location
BLWP @GPLLNK        Use GPL Linkage
DATA >0018          Load "Small Capitals" characters
TEXMO LI R0,>01F0    Setup for text mode
BLWP @VWTR          Place VDP in text mode
LI   R0,>074E        Setup for screen colors
BLWP @VWTR          Write screen colors for text mode
LI   R0,>0401        Relocate character table to >800
BLWP @VWTR          By writing to VDP register 4
MOVB @TEXMO+3,@>83D4  Stash the text mode byte
    
```

This last operation, putting the byte at TEXMO+3 at >83D4, is necessary because otherwise the computer will go back to graphics mode as soon as any keystroke is accepted.

Of course the LOAD program does a host of other operations, but these are the key ones. The next-to-last two lines tell VDP to look for its character definitions at >800, and this allows us to perform reading and writing of screen characters without that nagging offset. Those who've done work involving Assembly and XB will notice that we've done a BLWP @GPLLNK. XB does not supply such a link vector. Our LOAD program supplies one of those, as well as a DSRLNK. The utility vectors (GPLLNK & DSRLNK) we use are those written and published some time ago by Craig Miller.

That leads into another topic, the use of utility vectors and routines. If a single program is to operate in both the E/A and XB environments, one must also overcome the fact that the nice easy REFs provided by E/As Option 3 are not available. If the program was designed for XB, one can arrange to provide the XB utilities when operating under E/A. Conversely, one can design so that the XB version uses the E/A utilities.

In different programs, we've used both these approaches to closing the utility gap between XB and E/A. That's a topic we plan to explore at some length later in this series. For now, we'll just say that on a disk here at Harrison, we have a file called EAUT and a file called XBUT, so we can get the whole set of either into one of our programs.

When exiting from our WP program, we undo the things done on entry. We reset the VDP to graphics mode by putting a byte of >E0 at location >83D4, then LI R0,>01E0, and perform a BLWP @VWTR.

That's important, because E/A expects the screen to be in

graphics mode when it resumes control. If you omit doing this, then return to E/A, the message PRESS ENTER TO CONTINUE, instead of being centered at the bottom of the screen, will be moved right so much that the UE of CONTINUE will be on a separate line. No real harm is done by this, but it's annoying to the user, and so we feel it should be avoided.

That's about all we'll cover today. It's a lot to digest for one sitting, anyway. For those who are serious students of Assembly, we recommend trying the two programs in today's sidebar. Should you encounter difficulty, or need help with understanding what we're doing, please feel free to call us anytime between 9 a.m. and midnight Eastern time at (301)277-3467. We'll do our best to help you over the hurdles.

In our next article, we'll get into the subject of Loaders, of the sort we mentioned in passing here. For our own programs, we make customized loaders in each case, and take some liberties with the structure of our memory image files (no file headers), so our methods may be controversial, but they do work.

Looking for a great time? Attend a TI fair next year!

Vendors, visitors had plenty to do at Chicago TI Faire

Story and photos
By GARY W. COX

The Chicago TI Faire has once again come and gone. While I do not know the exact attendance numbers it was reported that more attended this year than last year plus I can personally say that a good crowd of TI enthusiasts was present all day long.

Many vendors reported sales from fair to good, and a few did very well. While the faire closed at 5 p.m. Saturday, sales were still being made at 7:30 p.m. that night!

The faire also brought forth many new products. Among the new products was Barry Boone's "Sound F/X" (\$14.95) program sold through Texaments whom Barry Boone and Lee Bendick represented at the fair. Sound F/X allows the user to play true digital sound (recorded music, speech etc.) through a TI99/4A or Geneve 9640 without additional equipment. Sound F/X allows the playing of sound files from IBM (Sound Blaster VOC files), Macintosh or Amiga computers (SND files). The standard TI99/4A is limited to about 15 seconds of play time due to memory constraints, although optional equipment such as an 80-column card (for additional memory), Super Space or other compatible memory will increase the play time. A standard Geneve will give 400K worth of memory space. A Geneve equipped with a Memex memory expansion card will provide up to 1.7 megabytes. At any rate, this is truly a remarkable program with surprising sound quality in the playback of digital sound files.

Also available from Texaments was a selection of disks with various sounds for Sound F/X, ranging from voices of famous people and cartoon characters to science fiction characters and even some music. Other new items from Texaments were 10 games, ported over from Tomy Tutor, exclusively for use with the Geneve 9640. Included are the games Space Champions, Cave Explorer, Train Twister, Time Guardian, Jungle Terror, Traffic Frenzy, Islander & Car Race, Submarine Revenge, and Sea Terror.

New from Bud Mills of Bud Mills Ser-

vices was TIM converter, which takes an RGB analog signal and converts it to composite signal. This allows the user of a previous monitor arrangement to use a composite monitor or TV with the TIM 80-column device. In addition to selling the Memex memory card for the Geneve and the Horizon RAMdisks, Mills also sells the Miller Graphics EPROMs (\$35) for the CorComp disk controller which are used to enhance the operation of the disk controller. The Accelerator Card for the TI99/4A, which greatly speeds up the operation of the TI99/4A, was not available

tridge that plugs into the module port. The user selects the cartridges that he wants and it is all burned into one cartridge by OPA and accessed through a menu. For a basic unit containing 256K, programs from 5-7 cartridges can fit on one POP-cart. However, units up to 2 megabytes are available. The cost for the basic unit is \$95 plus \$4.50 shipping. The POP-card uses the feature built into the console called "REVIEW MODULE LIBRARY" to access the various cartridges. However, for an additional \$25 a scrolling pop-up menu is available with additional features, such

Vendors and buyers get together on the main display floor.

but is still in the works. No date was given for when Accelerator Card would be ready. One additional note from Bud was that he offers to anyone that sells their smaller Horizon RAMdisk to someone in order to purchase a bigger RAMdisk from him, Bud will warranty the old RAMdisk to the new owner for a period of 90 days. This applies only when someone purchases a new RAMdisk from him and sells the old one.

Gary Bowser of OPA demonstrated his digital sound adaptor which connects to the parallel port and allows the user to play back 8 bit digital sounds. This device is expected to be available by the end of the year.

Also new from OPA was POP-cart, a device containing a set of user-selected TI99 modules/programs all in one car-

as the loading of assembly, object, Forth and c99 programs via the menu. Furthermore, on special request, some disk-based programs can also be burned into POP-cart, such as Rapid Copy, Disk Utilities, etc. Users can have everything they need in one regular-size cartridge which can be carried around. Furthermore, if XB and TE2 were burned into a POP-cart TE2 speech would be available in XB.

Also available from OPA is replacement GROMS 0 and 1 of the console, allowing the cataloging and loading of most programs without the need of a cartridge.

Representing 9640 News was Beery Miller displaying a variety of products for the Geneve 9640. Newly available through

(See Page 27)

CHICAGO FAIRE—

(Continued from Page 26)

9640 News was GEME, a software package where multiple windows are allowed and the ability to scroll around them is possible. This package was completed by Beery Miller and Myarc has permitted its release. The only cost to users is shipping and handling of \$5. Also new was PSYSTEM, which includes the P-system run-

Mike Maksimik demonstrates his MIDI interface for the TI.

time and library file along with MDOS 0.98H and 1.15 which should only be used with the P-system. It has been reported that P-system will run all software which will run on the P-Code card by TI. Cost of P-system is \$10. Distributed through 9640 News was GenBench Shell (\$20), a utility that allows one to interface from MDOS to any MDOS or GPL program, providing the ability to build a menu and run anything at will. Included in this package are GenBench utilities that interface with TIC, allowing one to use a graphic mode environment to overlap windows with scrolling. Another addition through 9640 News was GenTRI (\$49.95), a telecommunications, disk manager and word processor all in one package.

All the above 9640 News products are for the Geneve only. However, 9640 News is also distributing the re-release of several programs by Mike Dodd, including PC-Transfer (\$25), PC-Transfer utilities (\$7.50) and Identifile (\$10) for the TI99/4a plus Hypercopy (\$15) for the Geneve.

Ken Gilliland of Notung Software displayed many new software products, including the Bride of Disk of Dinosaurs (\$12), Fonts and Borders (high quality TI Artist format fonts and borders, \$7) and Disk of Horrors (\$12) containing TI Artist art files, music and animation plus three original horror short stories by Ken Gilliland. Updates to several products include

Filmlib version 3.01 (\$7) for use with TI-Base which has an enhanced menuing system, better print routines, enhanced on-screen display plus editing and append-

ing features. Also updated is TI Casino V3.0 (\$15) which now has five separate bank accounts, multiple users with password protection, enhanced craps, raised house limits, true Vegas style Baccarat plus the addition of a nightclub complete with a comedian who tells jokes! Note that updates are free, just return original disks with proper return postage and mailer.

Mike and Chris Maksimik of Crystal Software displayed their MIDI interface and a collection of songs.

Mark Van Coppenolle of CaDD Electronics displayed its GRAMulator Kit, which functions like the GRAM Kracker (in fact looks much like one). The basic kit costs \$55 (must be assembled) or can be ordered assembled at an additional cost. Among other products was RICHGKXB (\$24.95), which is an enhancement to the original TI Extended BA-

SIC and requires the use of a GRAM device (GRAMulator, GRAM Kracker, etc.).

Representing Asgard Software was Larry Tippett displaying several new programs including Go-fer, Thumbnails (Geneve program utility for organizing, cataloging and converting MacPaint pictures \$14.95), Mail Room and SGW (CHARAI character editor \$14.95). Also at the Asgard Software table was a huge selection of other software from the company.

Bruce Harrison of Harrison Software demonstrated two new games: Scud Busters (\$14.95) and Code Breakers. Another new program available was Smart Connect (\$10), a program which allows the transfer of files between a TI and IBM compatible by the use of a connecting cable. Bruce Harrison's table was very busy all day with people purchasing his new products and old, including a good collection of music.

Representing L.L. Conner Enterprises was Larry Conner selling products ranging from TI brand software to hard-to-find parts such as console L connectors and hexbus equipment.

Competition Computer also had a big assortment of TI brand software, cables and parts, including quite a few peripheral expansion boxes.

John McDevitt of Rave 99 demonstrated a new PE2 expansion box. Rave also dis-

Gary Cox and Terrie Masters pose with Barry Traver (right), winner of the Birdwell prize.

played its speech adaptor cards and enhanced keyboards.

Tom Freeman of J&P Software had sev-
(See Page 28)

CHICAGO FAIRE—

(Continued from Page 27)

eral programs available, including Hard Back, Disk Assembler and Bugger.

MS Express Software displayed several software products and mentioned that several new products are currently in the works.

Available from several vendors was a device by William A. Shores of Suite #107, 5679 S. Transit Rd., Lockport, NY 14094 called E/B Module Expander (\$25) which is said to give you the ability to have Extended BASIC and 5 other cartridge selections all in one. The device is a kit where you take the GROMs (can only use modules with 16-pin GROMs) from your old cartridges and place them into this new device, which is slightly larger than a regular cartridge, and the user may switch between the cartridges with a 6-position switch.

Ron Markus of Ramcharged Computers had various products for the TI99/4A, including a large supply of Prostick II joysticks. Barry Traver of Genial Computerware was present promoting his magazine on disk as well as Genie of which he is sypop of the TI section. Roy Hunter of Hunter Electronics was present with various TI products. Disk 'N Dat sold a variety of generic computer supplies such as paper, ribbons, surge protectors, etc.

A company named Del and Walter had a huge selection of disk drives and various other TI hardware and software. Furthermore, several user groups had tables, including Hoosier from Indianapolis, Milwaukee 99 Users Group, Will County TI users group from Romeoville, IL, and the St. Louis 99 User Group. Representatives of many other user groups across the country were present, including several people from my local users group (Mid-South Memphis TI99/4a Users Group).

Besides the new software and hardware some fantastic deals on used equipment was present at prices so low I had best not even mention it!

Also throughout the day various seminars were held by the various vendors demonstrating new hardware and software, as well as items that have been around a while.

BIRDWELL AWARD

At the close of the faire at the Saturday night banquet the John Birdwell Memorial Fund award was presented by John Birdwells wife Kathy and daughter Kelly to Barry Traver for outstanding excellence in TI and Geneve 9640 community.

As usual the Chicago TI Faire was great and my thanks go to the organizers (Hal

Shanafield was in charge) who got it all together and my thanks also goes to those who from the Chicago UG donated their time and equipment to putting on such an event. Plus from what I heard the staff at the Holiday Inn did a great job keeping arrangements straight for the event. If you haven't attended a TI fair, I would highly recommend it.

TI Source resumes operation

After being down for more than three months dues to equipment failure, the TI Source bulletin board system sponsored by Texaments has resumed operation.

TI Source is a free service featuring user-to-user messaging, program downloads, TI news, technical information and

information about Texaments products. It is accessible 24-hours a day at 516-475-6463.

TI Source has logged over 50,000 calls since it went online in 1983. For information, contact Texaments at 516-475-3480.

Guilford 99ers president dies

George William von Seth, president of the Guilford 99ers, died Oct. 28 at the Wesley Lang Community Hospital in Greensboro, North Carolina. He was 73.

A service of celebration was held Oct. 31 at the Starmount Presbyterian Church, of which he was a member. Burial was at Forest Lawn Cemetery.

According to Bob Carmany, von Seth was one of the founding members of the users group 8 years ago. "George and I were the only two left of the original members," he said.

A native of New York City, von Seth

was the retired co-owner of Zimmerman-Evans Inc. He was an army veteran of World War II, a Mason and a former member of Civitan.

He is survived by his wife, Virginia Sim-mons von Seth; two daughters, Helga Carpenter of Whitsett, North Carolina, and Pat Froman of Salisbury, North Carolina; a sister, Mildred Jungen of Maywood, New Jersey; and four grandchildren.

The family asks that memorial contributions be made to the charity of the donor's choice.

1992 Lima fair set

The next Multi User Group Conference sponsored by the Lima, Ohio, 99/4A Users Group is scheduled for May 15 and 16 at the Ohio State University Lima Campus, according to the group's newsletter.

The conference, free to all participants and vendors, is scheduled to begin at 4 p.m. May 15 and to end at 8 p.m. May 16.

For further information, contact the Lima 99/4A Users Group, P.O. Box 647, Venedocia, OH 45894.

1992 Washington fair slated for September

The next annual State of Washington TI Convention is scheduled for Sept. 19 in Tacoma, according to Cynthia Becker, one of the organizers.

For further information, contact Jim Tompkins, (206) 756-0934.

Harrison Software introduces products

Harrison Software introduced several new products at the Chicago Faire Nov. 3.

Code Breakers, written in assembly, is described as a "thinking man's" game which provides cryptograms on-screen for the player to solve. The disk contains a file of 380 puzzles, and the program has built-in capability for the user to create and edit his own puzzle files or edit the supplied file. A two-player "challenge" mode allows one player to enter a puzzle which the computer will encipher for the other player to solve. The program and puzzle file are all on one SS/SD disk, and the program will load and run from Extended BASIC, Editor/Assembler or TI-Writer. It is compatible with RAMdisk installation, according to the manufacturer. Price is \$14.95, including shipping and handling.

Harrison has begun a whole new line under the J.C. Bach Music label (a unit of Harrison Software). Performed by Dolores P. Werths, the company's "resident musician," 20 pieces from Johann Sebastian Bach's Anna Magdalena's Notebook make up the first product in the line. The package is available in two forms. In mem-

ory-image form, four DS/SD disks comprise the package, selling for \$15 including shipping and handling. These memory-image files are designed for use with a five-octave keyboard and for use on TI99/4A computers. For those who own Geneves, or have less than five octaves available, or who simply wish to do their own musical experimenting with the Bach pieces, the company offers the source files in SNF format on two DS/DD disks at \$25. Single-sided versions are also offered on request.

The company also has produced two disks full of utilities for those who program in Extended BASIC. These are assembly subroutines which can be merged into XB programs via ALSAVE or any other method the user chooses. Annotated source code is supplied on the disk. Each disk also includes an XB program to print the source code files and instructions, so these disks can be used by those who own only the XB module. Demo programs for each utility are also supplied.

The General Purpose utilities include ones to perform special kinds of Accept At functions for string and numeric variables, plus two different forms of boot tracking so programs written in XB can "know" from which drive they were loaded.

The Random Number utilities provide quick ways to make random numbers available in XB Variables. These include Dealer, which deals a deck of up to 54 cards into any XB array, MULDEK, which deals up to five decks of 54 cards each shuffled together, and one which simply reports "tailored" random numbers in a user specified range of values into any XB array variable. This last one will fill an array of dimension 500 with such numbers in less than one second. These utilities all include Harrison's "Seed" subroutine, which will correctly seed the random number process regardless of how the program started, the manufacturer says.

These utility disks are available through Tigercub Software (156 Collingwood Ave., Whitehall, OH 43213), user groups and other sources. For those who have no access to those sources, Harrison Software will provide them for \$3 each, including shipping and handling.

For any of these products, make check or money order payable to Harrison Soft-

ware and write the company at 5705 40th Place, Hyattsville, MD 20781.

Bruce Harrison of the company says that a revised edition of Smart Connect, the company's TI-to-IBM data transfer product, is being sent to all customers. He says the first disk was found not to work with all PCs.

JP Software titles available from Coffey

The following JP Software titles are now available from Jerry Coffey:

Triad is a terminal emulator, disk manager and 40-column text editor combined in a single program so everything is in memory at the same time. Both 99/4A and Geneve 9640 versions are included. Author is Wayne Stith. Price is \$20.

Chainlink Solitaire is a solitaire card game by Wayne Stith and Walt Howe. It requires a TI99/4A and Editor/Assembler, TI-Writer or Extended BASIC. It sells for \$12.

The following programs by Mike Dodd are available: PC Transfer v1.1 plus utilities (9940 and 99/4A), a TI-IBM data transfer program, \$25; utilities only, \$7.50; HyperCopy (9640-MDOS), a disk copying program, \$15; and IdentiFile, a program which provides a directory including information on the types of files the disk contains (99/4A and 9640 GPL), \$10.

Any of the above, as well as v1.02 of Gen-Tri at \$49.95 may be ordered from Jerry Coffey, 9119 Tetterton Ave., Vienna, VA 22182.

9640 News selling Mike Dodd programs

9640 News is now selling programs by Mike Dodd formerly distributed solely by JP Software.

They are HyperCopy, \$15; PC Transfer, \$25 including utilities files (utilities alone \$7.50); and IdentiFile, \$10.

Beery Miller of 9640 News notes that he is not in a position to handle unfulfilled orders with JP Software. For information or to order, write 9640 News, P.O. Box

(See Page 30)

How to scan and digitize graphics with a PC, for use on a TI, without having to use cheap waxed paper and maybe go blind

By RAY KAZMER

(This is the first of a two-part article. Part 2 will be published in December.—Ed.)

I won't mislead anyone. I'll say up front, this "process" requires extensive use of a PC (IBM compatible) computer. It cost me nearly two years and \$2,600 to "discover" it, but you may be able to do it now, for a lot less!

This may shock some die-hard 99'ers but there are now many 99'ers who bought a flashy PC, but did not abandon their TIs. I'm one of them! You would probably recognize some of their names. If I told them to you! (But I'm no squealer!)

I've found that my TI and my PC are not only "compatible," but actually work very well together. I bought my PC-AT to use its hi-tech VGA capabilities, to create super graphics, for all our TIs.

My main objective was to be able to put any picture I could see on the TI, including any photograph, fonts, charts, maps, cartoons (Woodstock or Garfield?) videotape frames (which could be used to create stunning animations) and anything else my greedy little heart desired! (I succeeded,

but it has been a challenge.)

Even before I bought my PC, I knew text files (D/V80) could be transferred between a TI and a PC, because ASCII is exactly the same on both machines. But, graphics is something else. They can be as different as a wren and an ostrich!

There are several ways to transfer data, between a TI and a PC. John Koloen outlined most of them (October 1991.) There's just one additional comment that I would like to add to John's article, regarding the use of modems. You do not need them.

Look at the back of your RS232 card (where your printer cable is hooked up.) You'll see there is also a female 25-pin connector, where most modems connect. If you already have a 25-pin modem cable (a "null modem" in computerese) just hook that sucker up, between the RS-232 card and the serial port on your PC. With a terminal program running on both machines (I used Telco on my TI and Procomm Plus on my PC) both computers think they are "talking" to a modem, even though there is no modem between them! Text can then be transferred in either di-

rection, at an incredible 9600 baud!

There's also one new arrival to the text file transferring scene, which John forgot to mention, called Smart Connect, from Harrison Software (September 1991, page 32.) I don't know if Smart Connect will transfer a graphic file (D/FI28), however.

EXPERIMENTING

At this point, I should explain how I "experiment." As soon as I have found something that works, I stop searching! Undoubtedly, there must be more ways to transfer graphics from a PC to a TI, but I'll leave finding them to someone else.

Transferred graphics can work with TI-Artist, GRAPHX, Picasso, or whatever you want, if you will first use Pix-Pro (by Jim Riess, from Asgard) to "switch" formats. Owning Pix-Pro is necessary if you intend to use my secret process.

Between all TI art programs there are some 12-15 formats. On a PC, there are hundreds of formats and some of them differ, even within their own formats. As an example, I've found about nine .MAC for mats. Some will load into MACFLIX, and

(See Page 31)

Newsbytes

752465, Memphis, TN 38175-2465.

GenBench Shell announced by LGMA

LGMA (Little Green Men Associates) has produced GenBench Shell, a program for the Geneve 9640 which provides a "shell" around the MDOS file and disk management functions.

According to Al Beard of LGMA, the program is a menu-driven, mouse capable, windowing environment that layers on top of the 9640 Windows driver by Beery Miller.

Beard says that, using Shell, the user can define up to 15 programs under the

utilities menu item in the menu list. The appearance and usage of the Shell is similar to Graphic User Interfaces (GUIs) for other computers.

The Shell disk contains a windows library, a collection of useful routines that enable a programmer to create, select and memorize windows. Also included are routines to allow the programmer to create menu bars, control the Myarc or Logitech mouse, and to define a set of "pick lists" within a window to allow the user to interact and enter text, integer and list data. The windows library is compatible with the upcoming release of the Full-C Compiler for MDOS, TIC, Beard says. These routines as well as the Shell itself are written in Full-C.

Shell comes with a 20-page manual, additional documentation describing the windows library routines.

Shell is available from 9640 News for a suggestion retail of \$20. The product can be ordered from the 9640 News BBS, (901) 368-0112, or directly from LGMA Products by sending a check or money order for \$20 to LGMA Products, 5618 Applebutter Hill Rd., Coopersburg, PA 18036.

Want to reach thousands of TI users without paying a dime? Send information about your products and services to MICROpendium Newsbytes, P.O. Box 1343, Round Rock, TX 78680.

SCANNERS—

(Continued from Page 30)

others will not. This is one reason it took me so long to find this process.

There's something else to consider before you rush out to buy your scanner. They're expensive, difficult to use, and work far from perfect. They must be rolled over photos or text, with a slow, steady pace, in an absolutely straight line. If your hand slips (or your heart beats) as you scan, the scan might come out "bent." You may not even notice this slight distortion on scanned photographs, but a font or text can come out looking simply awful. If you get unsatisfactory results, your only option is to re-scan your original, or in the case of a font, "clean it up," once it's on your TI. And that can be exhausting work.

It might be helpful for you to know what a hand scanner is, how it works and what sort of problems you can expect.

HAND SCANNERS

First, the word "digitize" may not be in your ratty, old dictionary. It's a new, hi-tech word, which appeared around the time personal/home computers, became popular. It means: "turn into numbers" (or something like that.) That's what a scanner does — digitize. There are also digitizers which work with sound.

A scanner "sees" a photograph (B&W or color) as varying shades of gray, and almost instantly converts those shades into dot patterns called "dithering" as a scanner is rolled or pulled over your original. This does not harm the photos.

The "dithered" graphic file created by the scanner, can be loaded into several different PC art programs, and edited. You can change a single pixel, erase unwanted backgrounds, flip part or all of a scan on its side, stretch and compress the images, invert dot patterns and even put your ex-wife's head on your dog's body! (Generally speaking, you can screw up any scan, any way you want.)

OPTICAL CHARACTER RECOGNITION

There's another outstanding use for a scanner. Since I made one reference to the September MICROpendium, I will make one more. Take a quick peek at page 27. You will see the start of a huge program titled, FLAGS. If you have lots of time, you could key it all in, or, if you have \$4 sitting

around, you could buy it on disk from MICROpendium, ready to run.

There's a third alternative, if you have a PC, a scanner and an OCR (Optical Character Recognition) program. Letters typed on a page, such as you are reading now, are called "letter tone" (pure B&W) and contain no middle-tone grays, unlike photos. Scanners have switches on them, to select the sizes and types of images you wish to scan. The problem with this is that scanners create only graphic files.

But, if you're operating a scanner through an OCR program, it creates files that can be converted into text, which can then be loaded into word processors.

Hand scanners are "glory machines." They have a great reputation, based solely on the imaginations of people who've never used one. A scanner can make a shambles of a text file, especially if you use it in a careless manner, such as daring to breathe, while creating a scan.

However, publishers of OCR programs know a scanner can not "read" as well as your basic seven-year-old and have given us a way to correct read errors. The OCR program will substitute a character for one it doesn't recognize, and it lets you select which character you want to use. (I use a "*" as my substitute.)

Let's say you've scanned the FLAGS program, and line 140 is supposed to be:
140 CALL KEY(0,K,S):: IF
K=83 THEN 150 ELSE 140
!228

But your scan, comes out looking like:

```
140 CA*L KEY(0*K,S):: IF K=83
THEN 1*0 ELSE 140 !2*8
```

Most OCRs also have a special built-in word processor, which searches for every "*" then stops the cursor on each, so you can type a correction over it. In most cases you can easily figure it out, like the missing "L"

in "CALL." But there may be a time, when you must check your original listing for a number, like that misread "5" in "150." I know this sounds hard, but it's really a lot easier and faster than keying it all in.

So what! Who needs perfectly typed text files of a program, you might ask. Once

it's in this form, you can transfer it to the TI and convert it to a runnable program format, with Paolo Bagnaresi's Basic Builder. The total estimated time for a program like FLAGS would be about two hours, from start to finish. So, how long would it take you to key FLAGS in, then find and fix every error you added?

(Continued next month)

MICRO-REVIEWS

Scud Busters, Code Breakers first Harrison game offerings

By STAN KRAJEWSKI

Ratings for the software reviewed in this column are based on the star system that follows:

★ Leave it alone, back to the drawing board.

★★ Needs improvements, but workable.

★★★ A good program, worth trying.

★★★★ Send your money and buy it.

By the time you read this the Chicago TI User Group International World Faire, held Nov. 2, will have passed. However, thanks to Harrison Software, I have two programs which made their official debut there.

Bruce Harrison is known for his music disks, and has dabbled in applications with his word processor program. And now, with these two programs, he has entered the arena of games.

★★★
SCUD BUSTER

Okay game lovers, get your sights ready on this one. Scud Busters is based on a Desert Storm scenario, in which the player is manning a Patriot Missile Battery in Saudi Arabia, trying to shoot down incoming Scud missiles launched from Iraq. System requirements are PEB with memory expansion, disk system, XBASIC, Editor/Assembler or TI-Writer, and joysticks. In case you're wondering why I mentioned the PEB in the system requirements, this game did not work on my Cor-Comp 9900 Micro Expansion system. Bruce Harrison believes it will work on a Geneve, as the program has built-in calibration routines. If it works on a Geneve, the game will play at the same pace as a TI, regardless of the clock speed the Geneve is set for. (Due to my RGB monitor not being back from repair yet, I was unable to run these programs on my Geneve. But I will provide an update for Geneve compatibility when I get it back.)

This game runs at a good speed due to it being written in assembly language. It takes no more than 10 seconds to load and has been programmed to be compatible with RAMdisks and to load and run from

any floppy drive.

Your attention is first grasped by the Scud Busters title screen, followed by its theme music from Tchaikovsky's Arabian dance. It then asks you whether you want a one or two player game. Each player can also pick his own skill level out of the three skill levels offered. As the game proceeds you will be kept very busy as the Scuds start dropping from the top of the screen. There is a dot in the center of the screen that becomes your gunsight. You must maneuver the dot into the path of the incoming Scud in order to blast it from the sky. Your timing and judgment of lining up the path the Scud will determine how well you will do.

The graphics aren't bad and the way the Patriot continues past its target if you miss is a good effect. You can see the Scud missile and the Patriots very well, as the background screen is a good choice of colors and also agrees with your eyes. This is important as this is not a short game. You only get one Patriot per Scud and, like the real thing, they really do travel fast. There are no unnecessary sound effects that would annoy you, and the sound effects that are used let you know whether you made a hit or whether the Scud made it to the ground. After playing for a while you don't need to look at the score to see if you made a hit. You will be able to determine a hit from the sound. This lets you concentrate on the next Scud to appear.

During all this action you will need a break. So, after 20 launches you will get a screen that will summarize your perfor-

mance. It'll display whose turn is next, how many hits you had, how many misses, and also the percentage of hits you have had since the beginning of the game. When you are ready to continue, pressing the appropriate fire button will continue the game. During a 2-player game, the first player's score is displayed on the lower left, and the second player's score is displayed on the lower right. The player's whose turn it is is displayed in the lower middle of the screen.

For each hit a player scores 50 points. For each miss 10 points are deducted from your score. The game will continue until a player gets 10,000 points, or until a player gets minus-1000 points, resulting in losing the war. At the end of a 2-player game statistics for both players will appear on screen.

The reason I game Scud Busters three stars is that a crosshair could have been used instead of a dot as the aiming device, because it is a little hard to distinguish the dot from the background stars. Some type of second screen would have been nice to change the scenery for a long-playing game such as this. Also, a little more graphics could have been added for a better looking playing field. This, however, does not take away from the fun of this game. I found it entertaining for adults and teenagers in the family.

Scud Busters is available from Harrison Software, 5705 40th Place, Hyattsville, MD 20781. Price is \$14.95, including S&H.

★★★
CODE BREAKERS

Code Breakers, by Harrison Software, is a program that I see as one-of-a-kind — a game that will keep you busy for hours. You don't have to wait for your weekend newspaper when you can now set up your own cryptograms anytime with the help of your computer.

Like Scud Busters, Code Breakers is a new game released during the Chicago fair. System requirements are Extended

(See Page 33)

MICRO-REVIEWS—

(Continued from Page 32)

BASIC, E/A, or TIW, 32K and disk system. Once again, this is a fast loading assembly language program.

After the title screen, there are three options: 1. PLAY FROM DISK; 2. PLAYER CHALLENGE; 3. MAKE/EDIT FILES. After selecting on option, you may choose the skill level: Normal or Professional. It will then default to "DSK1.Puzzle," which is the one player cryptogram. At this point, if you have already set up new puzzles with the Make/Edit Files selection, you may choose that. At the next prompt it will say "Solve the Puzzle." Below will be what was "Plaintext" in the file, and is now "Ciphertext," which is the encrypted file. The loading and encrypting takes only a few seconds.

While trying to solve the puzzle in the normal mode you can see punctuation and spaces where appropriate. If using the existing "Puzzle" file, these are "wise sayings" that you must encode. As you choose a letter from the alphabet, any occurrence of that letter anywhere else in the saying will also be changed to that letter. If you

happen to jumble up the saying more than you expected, simply pressing FCTN 9 will put the saying back to the original encrypted order.

After you think you have solved the puzzle, you press Enter and the program will tell you whether you are right or wrong. If you were wrong, it will ask you if you give up. If you give up at this time it will reveal the saying, give the keyword used as the base of the cipher alphabet, and the remaining letters of the alphabet not contained in the keyword. When playing from a file on disk, no puzzle will be repeated during that session of play.

Now once you master the normal option, you still can get a whole new experience by trying the professional mode where all punctuation is gone and the saying is broken up into 5-letter groups of characters.

For real family fun, and if you are not ready to encode a message yourself, you can turn to the Player Challenge option. My family preferred this option as we are not regular cryptoanalysts and were able to use this option to get used to the game.

It is played similarly at both levels except that one player turns his back while the other player types in his own saying. The players then take turns. In this way you can use hints as needed, such as subject, give letters away, etc.

Code Breakers is a great example of fine programming, and uses boot-tracking so that the default drive for for the puzzle file will be the drive from which the program was loaded. There is built-in error protection of existing files. Having a Make/Edit feature to customize the program with your own files is very handy. This game is fully compatible with RAMdisk and the author says it should work on the Geneve.

Code Breakers is available from Harrison Software, 5705 40th Place, Hyattsville, MD, 20781 priced at \$14.95.

READER TO READER

Ian J. Atrill, Suite K, 237 W. 2nd St., North Vancouver, British Columbia, Canada V7M 1C9 asks:

I would like to know, specifically, how one goes about partitioning the Horizon RAMdisk into two or four drives on the Geneve. I have followed the documentation which accompanied the RAMDOS114F patch, but with no more than cosmetic success. Various files I have downloaded (e.g. menu batch files), prove that either others have figured out how to do this or that I am doing something wrong in the first place.

Frank C. Legler, 118 Riggs Dr., Clemson, SC 29631, asks:

Has anyone discovered a way to put character numbers 199-255 into data statements other than by disk sector editing? The TI99/4A ROM does not contain this range of numbers. Direct input via the keyboard would be highly useful for fonts and other graphics programs for printers.

Robert Schulz, Kirnsteinstr. 20 a, 8200 Rosenheim, Germany, writes:

At the International TI-Fair in Wiesbaden last year I purchased the program YAPP, which is distributed by Asgard. Can any of the readers tell me the control codes for the TI-850 printer, so that I can use the hardcopy of YAPP with that printer? The program works fine with an Epson FX 1050.

Alfred Slovak, Fugbachgasse 18/17, A-1020 Vienna, Austria, writes:

In the August issue of MICROpendium I found a User Note to use the Break key with Extended BASIC on a Geneve. I have the same problem with Myarc BASIC V2.99A. The Break key (resp. F4, CTRLC, ALT4 or Page Down) works only if the program stops due to an INPUT or ACCEPT AT statement. Not even at a CALL KEY statement can the program be interrupted by the Break key. I helped myself by inserting: "IF KY2 THEN BREAK", but this seems not to be "the yellow of the egg," as we call it.

Bill Cannon of the Victoria 99ers User Group, 2015 Casa Marcia Cres., Victoria, British Columbia, Canada, V8N 2X5 writes:

I was very impressed with one of the programs that I received from Tigercub Software, Disk 1250 CADMASTER by John Miller of 2458 Transit Ave., Anaheim, CA 92804, VI.9. It is the best CAD program that I have seen, but it doesn't have any way to send it to a printer, which means it is kind of useless for drawing purposes.

I wrote to John Miller but I have received no reply at that address (and would like) information from anyone with a later version of CADMASTER or John Miller's current address.

GenBench Shell

Even more reason not to leave your MDOS shell

By JOHN KOLOEN

GenBench Shell, by LGMA Software, is a nicely done shell program for the Geneve that should meet the needs of most users. The program is reasonably priced and represents an improvement over other menuing and shell-type programs.

GenBench Shell, which was written by Al Beard, runs out of MDOS and is loaded through a user's AUTOEXEC file. Another MDOS program, DRIVE-WIN by Beery Miller, is also required. DRIVE-WIN comes on the GenBench Shell distribution disk. When booting the Geneve, GenBench Shell is loaded and the user is presented with a screen that includes six pull down menus at the top. The menus are labeled Project, Utilities, File, Disk, Task and Window. By using a cursor or a mouse, the user selects from these pull-down menus. To use a mouse users must have a copy of MOUSE.MOUSE, which is not included with GenBench Shell. It is available from 9640 News.

What does GenBench Shell do? It serves as a platform from which to launch MDOS-based programs, or programs that can be launched from MDOS with the use of Barry Boone's EXEC program. After you exit the program, you are returned to the shell where you can launch other MDOS programs. GenBench Shell won't let you launch programs that require use of the GPL interpreter. To do that you would simply drop out of the shell using the Task menu and selecting the label DOSPrompt. You can then load GPL in the normal way. To return to the shell, you drop out of GPL back to the DOS prompt and type EXIT. Use of the word EXIT for such operations is common in the PC world.

In addition to launching, GenBench Shell includes a range of file and disk management functions. Under file management, the program supports the following operations: Copy, UnProtect, Delete, Protect, View and Rename. Under disk management, the operations are: Directory, Label, Format, Create Directory, Remove Directory, Copy, Compare and Check

Disk. While all of these functions can be useful, they are not implemented as well as in Disk Manager by Clint Pulley. Fortunately, it's easy to make DM one of the "tasks" that can be launched using the Utilities menu. When I want to do some serious disk management, I launch DM, perform the functions I want, and then jump back into GenBench Shell.

While all the File functions available in the shell are available in Disk Manager, several of the Disk menu features are unique to GenBench Shell. Among these are Compare, CheckDisk and Format. However, Format appears to work only in single-density mode. I tried using the command line to format a DSDD disk, but the process wasn't successful.

Because Myarc is still holding my HFDC hostage, despite having posted bond of \$75, I wasn't able to run GenBench Shell out of a hard disk. However, it is designed to run out of a hard disk, as well as a floppy.

The real meat of the program lies in its Task menu. It is here that you define the programs that you want to launch out of the shell. You can define up to 15 programs for launching, giving them a menu identifier, which appears as its name under the Utilities menu; pathname (subdirecto-

ries on floppies are valid); command line designation, which executes the launch; screen allocation (80-column mode and window mode, which is usable by a few 9640 programs; window definition, if window mode is used; and multi-task with the shell, which gives you the option of putting the shell "to sleep" while the task is running or letting them both run at the same time. This is only partially enabled and not of much use at this time.

The only unresolved problem I encountered was the tendency for GenBench to lock up the Geneve when faced with random keystrokes. The first time this occurred was by accident when I leaned against the keyboard while trying to select items from a pull-down menu. I was able to repeat this by overloading the buffer with keystrokes while accessing one of the menus. It is because of this that I gave the program a B+ for Performance. However, while using the program with purpose, it worked flawlessly.

Ease of Use: I found GenBench Shell to be easy to learn. After adding a few commands to my AUTOEXEC file, I booted into the shell and, within 30 minutes, had seven launchable programs available. (GenBench Shell comes with three programs already in the Utilities list: Fractals, Transform and File View, a sector editor.) I added Telco, PC-Transfer, Archiver 3.02 and Disk Manager. The first three programs require EXEC to launch while DM is a MDOS program.

Those with 9640 Windows in their software library will find GenBench even more useful in creating menu-driven windowing environments for their applications. However, this capability is accessible only by programmers, though end users may benefit from programs created by programmers using GenBench.

Documentation: The documentation that comes with GenBench Shell is adequate to the task, though brief. I would like to have seen a few more examples but didn't suffer for the lack of them. No pro-

(See Page 35)

Thumbnails

Thumbs up on Thumbnails

By JOHN TAYLOR

A very good TI friend of mine recently asked me if he provided the program would I catalog his Macintosh picture files, as the program would only run on a Geneve in MDOS. I said I had heard of or read of "Thumbnails" but wasn't familiar with it. A couple of weeks later he gave me the program and 65 DSDD disks of Mac pictures to catalog.

Thumbnails, by Francisco Garcia, is from Asgard Software priced at \$12.95. After printing out his catalog of Mac pictures I highly recommend it to all Geneve owners. It is a pleasure to use, totally user friendly and produces an excellent catalogue of nine named pictures to each page with the path name printed at the bottom of each page if desired. This option is probably for hard disk owners but DSK1. tells a floppy user absolutely nothing of the source disk's name. This is my only complaint with the program. Possibly the Cisco Kid can remedy this in an update to help the Geneve owners who aren't owners of hard drives.

GENBENCH—

(Continued from Page 34)

gramming skill is required to use GenBench Shell. The manual's step-by-step approach is thoroughly adequate.

I find GenBench Shell to be a step above such menuing systems as Menu 80. Its interface is neat and easy to use, and debugging Task entries is straightforward. The shell gives me plenty of flexibility in which to work and at the same time lets me drop into the MDOS command line interpreter to load GPL, if I choose. Coupled with GenTri, a Geneve user can pretty much work entirely out of MDOS mode, with word processing, telecommunications and disk management functions easily available. About the only applications still missing for Geneve users that require access to GPL are a spreadsheet (Multiplan) and a database manager.

But for now, this is nice.

Review

Cost: \$12.95, plus \$3 shipping
Manufacturer: Asgard Software, P.O. Box 10306, Rockville, MD 20849
Requirements: Geneve 9640, Epson-compatible printer

After reading the manual, I loaded Thumbnails as instructed; typing A:TN in MDOS and the program was off and running. The first screen is two windows, the left side the Title, which remains in view until the first thumbnail is drawn. The right side is the first of three main command menus. It has four basic commands for generating the list, plus "Quit." You must use the quit option to leave the program or the next time you run it you will wonder what's wrong. The first time I used the program in a hurry to go out I just shut off the P-box and couldn't get the program to function properly until I remembered reading "the only way to leave the program is to quit."

The heading for this window is: Directory Specification. The options are:

Path	Directory Mask
Compile Directory	Verify Path
Quit	

Pressing "P" requires you to enter DSK1., or whatever is required for the hard disk path name. Each must be followed by a period to function. Pressing Enter completes Path.

Having read the manual I knew the only other option I was interested in at this point was the third one. Pressing "C" you now get a taste of how fast this program is. Up comes the second command menu screen.

The heading for this screen is: Task List Developing. Options are:

Up a line	Down a line
Forward a page	Reverse a page
Top of list	Bottom of list
View flag	Print flag
New Directory	Check a file
Execute Task	Special Features

The first six options are self-explanatory and the dedicated cursor keys are also ac-

tive.

In the other half of this window, to the right, the list of Mac picture files has been listed preceded by two columns "V" and "P," giving you the opportunity to flag individual files for viewing or printing. Having read the manual, I pressed "S" for special features, which brought up the third menu.

The heading for this screen is: Special Feature. Options for this screen are:

View Full Size	Print Full Size
Flag all Files	Mac Pic Filter
Configure Printer	Slide Show
Back to Task List	

Again with knowledge of the manual I pressed "F" to flag all files on the current list. You are automatically returned to the Task List with all files flagged "V" & "P".

Back at the Task List menu the only thing at this point I am interested in is to Execute Task, so press "E" and the right window clears. The prompt appears: Print Path Name (Y/N). Answer N.

Working on File: (Name of First Mac File printed here)

When the picture is drawn, the program calculates print data and then prints the frames. After all the files on the disk are printed out you are returned to the Task List Developing screen with the last Mac

THUMBNAILS—

(Continued from Page 35)

file still showing as a Thumbnail in the left window, where it remains until a new Mac file is drawn.

Insert a new disk in DSK1. and press "N" for New Directory. This immediately finds you back at the Directory Specification screen with the cursor at Path. Hit Enter twice, then the down arrow twice, then "C" and proceed as before.

The process goes smoothly unless you have a file that is named improperly. This is not listed in the manual but I had trouble with several files and found they each had a "/" in their make-up. A trip out of the program to rename them I replaced the slash with a hyphen and then they ran successfully. One other file had an asterisk in its name and, after doing the same change, it also ran successfully. To do the job properly I had to re-catalog these disks, so I checked closely before starting any more, but that was the lot.

The look of satisfaction when my friend viewed his catalog was a pleasure for me to see. He commented that he had never seen a lot of his pictures as he had never printed them out, but now he had a very manageable catalog he could easily use.

After completing the catalog I experimented with some of the other options which I hadn't required to complete my task. I first went to Task List Developing after compiling a directory on a disk. I flagged a file to be printed and then Executed Task. The picture printed very quickly in the top left hand corner of the page.

I then went to Special Features and flagged the same file to Print Full Size, returned to Task List Developing and "E" to Execute Task and got an excellent full page print of my Mac file. It was surprising how faithful the reduction of the Thumbnail was to the Full Size except it was darker because of the concentration. Top score for this effort!

Next I reinserted the program disk as there were nine D/F128 files on the disk. Following the procedure required I got to Special Feature window and pressed "M" for Mac Pic Filter. Returning to the Task List Developing screen the list was reduced to five Mac files which I cataloged. (See Fig. 1 for 1 of the 5 Mac files printed

MONUMENTS

Fig. 1

by Thumbnails. The thumbnail is about 30 percent the size of the original.—Ed.)

Slide Show in Special Feature intrigued me so I took another disk and followed the process to the pressing of "S".

File Pointer: (shows the first picture name)

The pictures are drawn off screen and after an interval the filename changes at the File Pointer and the next picture is on the screen. It is not drawn over the previous one, as is the case when viewing and printing. I found the show to be very good and will no doubt find myself using it to sort my picture files into some system before making a catalog.

Pressing a key takes you back to the Task List Developing screen.

On the Task List Developing menu there is just one option I haven't tried: Check a file. So I reloaded the Thumbnail disk because I knew it had both types of D/F128 files on it. Pressing "C" you get a three-line window in the middle of the screen with the heading: Mac Picture Verification. Here is what appeared on the screen:

Checking File for Signature

File Appears to be a Mac Pic

When I checked a file I knew wasn't a picture, the last line was "Incorrect Signature" for a Mac Pic.

Again a very quick verification process for checking a single file but I would likely use Mac Pic Filter as I did earlier, if I were going to check the complete disk.

I decided to check out the Viewing a file function, so I flagged the first file with a "V" then pressed "E." Here is what appeared on the screen:

Working on File: (name of file)

Status: Drawing Picture

Status: (C)lip or other to cont.

When you press "C" you get the three-line window center screen as in Check File.

Clipper

Select One of the Formats:

(A)rtist

(P)age Pro

I chose Page Pro. Then this appeared:

Clipper Path

Old DSK1.

Use DSK1.

Clipper: Filename

Name: (name for Page Pro file)

When complete you are returned to Task List Developing menu.

I haven't found a way to unflag a file unless I go through the New Directory process.

I have viewed a file full-size on three different files and each time I was disappointed with this option, being much more comfortable with the thumbnail view by far on all three that I tried. Maybe I have misqueued but till I have more time I'll leave it at that.

I was so pleased with the overall operation of this excellent utility that I hope to spread the word to Geneve owners.

User Notes

Improving joystick connections

This following item comes from Ray Kazmer of Sundland, California. He writes:

Pairs of original TI joysticks have a small, light weight 9-pin connector on the ends of their extension cords, which plug into a "port" on the left side, of our consoles.

TI joysticks worked well, when they were new, but they tended to break down with strenuous use. As a result, most of us preferred "non-TI" joysticks, such as a Prostick II (if you could find one) or the

Epyx 500XJ. Although these joysticks are more durable, they need a "connector converter" to attach them to a console.

Unfortunately, the 9-pin plug on a converter is a big, heavy affair, which tends to sag down with time. Eventually, this can damage the plug or the port. To prevent that from happening, bulky plugs should be supported by placing an object under it, exactly the right size to hold the plug, perpendicular to the port.

I found a perfect "plug supporter." After using up a roll of toilet paper, I simply cut about one inch off the end of the empty cardboard core, then put that, open ends up/down, under the plug. If it ever has cof-

fee spilled on it, just snip off a new one. You will have an endless, free supply of plug supporters, and help to reduce our landfills, by "recycling."

Using TI-Base to figure payments

This TI-Base command file will compute a monthly payment amount for an auto loan from figures that you type in for purchase price of the automobile, any down payment that you might have to make towards the purchase, the number of payments to be made in your auto loan (4

This TI event listing is a permanent feature of MICROpendium. User groups and others planning events for TI/Geneve users may send information for inclusion in this standing column. Send information to MICROpendium Fairs, P.O. Box 1343, Round Rock, TX 78680.

Computer music

This program appeared in several user group newsletters and is by an unknown 12-year-old. Earl Raguse wrote about it in the User Group of Orange County ROM. The program is called AUTOMUSIC.

Classified

WANTED TO BUY

To barter FDC's Malta stamps with software (modules used or new), hardware for the TI99/4A. Also, friendly correspondence. Write: Anthony Briffa, Shalom, Godwin Ganado Str., Tal-Virtu, Rabat, Malta. 8/10

SOFTWARE

SMART CONNECT — For owners of both TI and PC computers. Assembly language programs for the TI, plus GW BASIC programs for the PC to transfer text files between PC and TI in both directions. Requires 32K, disk drive, E/A or XB or TIW module, RS232, plus a PC-compatible w/GW BASIC or equivalent. Send \$10.00 to Harrison Software, 5705 40th Place, Hyattsville, MD 20781. 8/10

ANNA MAGDALENA'S NOTE-BOOK — For owners of both TI and PC computers. by Johann Sebastian Bach —

SOFTWARE

for MIDI-Master. 20 Keyboard Pieces — colorful arrangements for harpsichord, synthesizer, as well as for piano. Play our arrangements or play your own from the Memory Image programs. Two forms available — Memory Image or SNF source code, so you may customize them to your own instrument and tastes. Source code required for Geneve.

Memory Image programs include list of instruments and patch codes. Programmed on a Casio CT-650. Runs 30 minutes. Requires 5 octaves (61 keys). Smaller keyboards will need source code to make modifications. 4 DSSD disks. \$15.

Source Code has all 20 pieces, fully annotated with key and time signatures, measure numbers, dynamic markings, dynamics, etc. Each track clearly marked, e.g. "Melody," "Bass," and measure numbers. Requires E/A, FW, or TIW. 2

Classified

SOFTWARE

DSSD disks. \$25.

Either form requires 32K, disk drive, RS232 and MIDI-Master 99. SS/SD format available on request. Prices include S&H. Send check or money order to: Harrison Software, 5705 40th Place, Hyattsville, MD 20781.

8/10

CODE BREAKERS — A cryptogram game for the thinking TI Owner. A file of 380 puzzles is supplied, and the program includes facilities to make, view, print and edit files of puzzles for yourself. Two-player challenge mode allows players to make puzzles for yourself. Two-player challenge mode allows players to make puzzles to stump each other. Fast Assembly action, can run from E/A, XB, or TIW. Requires 32K, SS/SD disk drive, and E/A or XB or TI-Writer. Send \$14.95 to Harrison Software, 5705 40th Place, Hyattsville, MD 20781.

8/10

TI-PUBLIC DOMAIN AND FAIRWARE

COMPLETE SYSTEM

Policy

The cost of classified advertising is 25 cents per word. Classified display (i.e., special formatting or graphics) is \$9 per column inch. Classified advertisements must be paid in advance. Classified advertisers may request a category under which they would like their advertisements to appear, but the final placement decision is the responsibility of the publisher.

Classified deadlines will be kept open for as long as practical. For the purpose of classified advertising deadlines, any classified ad received later than the first day of any month cannot be assured of placement in the next edition. We will do our best to include every advertisement that is submitted in the earliest possible edition.

The publisher offers no guarantee that any advertisement will be published in any particular issue. Any damages that result either from errors in copy or for failure to be included in any particular edition will be limited to the amount of the cost of the advertisement itself. The publisher reserves the right to reject any advertisement.

The advertiser may elect to publish the advertisement in subsequent editions at the same charge, payable prior to publication. The deadline for carryover classifieds is the same as for new advertising.

In submitting an ad, please indicate whether you would like a refund if it is not published in the requested edition or whether you would like us to hold it for the next edition. Cancellations and refunds cannot be made after the second day of the month.

Send classified advertising to: MICROpendium, P.O. Box 1343, Round Rock, TX 78680.
